CTA December 2010 Performance Notes

Rail Delays Over 10 Minutes
Rail delays over 10 minutes exceeded the monthly target in December. The increase was driven by a rise in maintenance, passenger related and terminal delays.

Rail Mean Miles between Defects
The Rail System experienced an increase in all major defect types in December driven by colder temperatures. Total defects for Dec 2010 is on par with those seen in Dec 2009; however, the rail system travelled approximately 12% less miles in Dec 2010 vs Dec 2009, accounting for an increase in MMBD from year to year.

Rail Fleet Unavailable for Service
In order to conserve costs, Rail Maintenance has allowed hold-ins to increase in the 2nd half of 2010. This helped control OT while maintaining fleet to meet service requirements. The current spare ratio is 20.4%; actual performance is well within spare ratio.

Increase in Bus Clean Inspection Scorecard
Bus Maintenance has addressed the performance issues experienced in November 2010. December 2010 scores are the highest we have seen all year.

Reported Lift and Ramp Defects
The overall increase of lift and ramp defects in December is due to cold weather—maintenance-related defects are generally higher in winter months.
