Executive Summary

Connecting 95th Street Terminal to 130th Street

The Chicago Transit Authority (CTA) is proposing to extend the Red Line from the existing 95th Street Terminal to the vicinity of 130th Street, subject to the availability of funding. The proposed 5.3-mile extension would include four new stations near 103rd Street, 111th Street, Michigan Avenue, and 130th Street. Each new station would include bus and parking facilities. This project is one part of the Red Ahead Program to extend and enhance the entire Red Line.

Open House Meeting

CTA conducted an open house meeting on May 13, 2014 to update the public on the status of the Red Line Extension Project; inform them of proposed alternatives, anticipated project benefits and impacts; and gather feedback from the residents of the Far South Side of Chicago. The meeting was designed to give the public a chance to share their concerns about the project with CTA representatives, as well as learn about the preliminary impact analysis of alternatives and the ongoing Draft Environmental Impact Statement process.

The open house meeting was held in the project area at a location that was accessible by public transportation and ADA compliant. In order to provide the greatest opportunity for community participation, the public meetings were scheduled in the early evening on a weekday. Spanish and sign language interpreters were available during the open house meeting. Outreach was conducted in both English and Spanish languages, as recommended in the limited English proficiency analysis performed during scoping in 2009.

During the meeting, residents had the opportunity to review boards displaying information about the proposed alternatives, talk with CTA representatives about the project, and provide comments.

Inviting the Public

In order to hear from as many members of the community as possible at the public meeting, CTA:

- Sent invitation emails to 670 residents who had previously demonstrated an interest in Red Line projects.
- Updated the Red Line Extension Project webpage, www.transitchicago.com/redeis, with information about the meeting.
- Contacted aldermen and local libraries and provided them with flyers about the open house meeting to distribute to community members.

- Posted alert cards providing information about the open house meeting at the 95th Street Terminal, on Red Line trains, and in buses operating out of the 103rd Street bus garage.

What We Heard

Attendees had the opportunity to comment in writing during the open house meeting. They also could submit their comments after the open house meeting via email or mail. A total of 212 community members attended the meeting. A total of 97 written comments were received from community members as of the date of this outreach summary.

Community members were asked what specific comments or concerns they had about Red Line Extension alternatives, potential impacts, and mitigation measures. Overall, the community supports the RLE Project and noted concerns related to the following topics:

- Property Displacements
- Community and Economic Development
- Noise and Vibration
- Timeline
- Safety and Security
- Traffic
- Alternatives Analysis
- Alternative Preference

As part of the comment card, residents also were asked about their use of Wendell Smith Park, Fernwood Parkway, and Block Park. Of the 81 completed comment cards, 63 filled out the section on the use of local parks. Most commenters responded that they did not use any of the parks. Of the comments received, Wendell Smith Park is the most-used park, primarily for walking, jogging, and community events.

Section 1

Project Background

The Chicago Transit Authority (CTA) conducted an open house meeting on May 13, 2014 to inform the public about the preliminary environmental impact analysis of the alternatives and options being studied for the Red Line Extension (RLE) Project. CTA is proposing to add major new transit service on Chicago's South Side by extending its busiest rail line, the Red Line, south from the 95th Street Terminal to the vicinity of 130th Street. The proposed 5.5-mile extension would include four new stations near 103rd Street, 111th Street, Michigan Avenue, and 130th Street as well as bus and parking facilities. The public outreach conducted in April and May 2014, along with the open house meeting, provided an opportunity for community members to learn more about the project, give their input about which alternative and option would best meet their transit needs, and the environmental impacts of each of the alternatives and options.

Section 2

Public Notification Activities

2.1 Press Release

The Mayor's Press Office and CTA Media Relations issued a press release announcing open house meetings for both the RLE and Red and Purple Modernization projects. The press release was posted to CTA's website on April 17, 2014 and is included in Appendix A.

2.2 Elected Officials and Stakeholders

CTA contacted elected officials and stakeholders starting April 10, 2014 to brief them on the project and provide information about the open house meeting. CTA representatives met with elected officials as summarized in Table 1.

Table 1: Elected Officials Briefed

Name	Representing	Briefing Date
Alderman Carrie Austin	34th Ward	April 10, 2014
Alderman Anthony Beale	9th Ward	April 15, 2014
Alderman Roderick Sawyer's Office Alderdwoman Michelle Harris's Office Alderman Anthony Beale's Office Alderman Howard Brookins	6th Ward 8th Ward 9th Ward 21st Ward	April 17, 2014
State Representative Al Riley's office	38th District	April 17, 2014
Alderman Carrie Austin's Town Hall Meeting	34th Ward	June 19, 2014

Meeting notes from the April 17th Aldermanic Briefing are included in Appendix B.

CTA provided flyers with information about the open house meeting to elected officials and other stakeholders to distribute to community members. The flyer, available in both English and Spanish, is included in Appendix A. The flyers were also emailed to libraries surrounding the project area to be distributed to patrons. A list of libraries receiving notices is included in Table 2.

Table 2: Libraries Receiving Flyers

Library	Address	City, State Zip
Blue Island Public Library	2433 York Street	Blue Island, IL 60406
Brainerd Branch Public Library	1350 West 89th Street	Chicago, IL 60620
Calumet City Public Library	660 Manistee Avenue	Calumet City, IL 60409

Walker Branch Public Library	11071 South Hoyne Avenue	Chicago, IL 60643
West Pullman Library Branch	830 West 119th Street	Chicago, IL 60628

2.3 Project Website

CTA updated the project website for the Red Line Extension Project, www.transitchicago.com/redeis, on April 17, 2014 with up-to-date project information. The webpage provided general information about the project and alternatives, details about the open house meeting, information about project funding and timeline, and frequently asked questions. A printout of the project webpage is included in Appendix A.

2.4 Social Media Updates

CTA shared three Twitter tweets and three Facebook posts regarding the project on April 17 and 18, 2014. Copies of these social media updates are included in Appendix A.

2.5 Postcards

CTA mailed postcards inviting community members to the public open house on April 17, 2014, to a list of 3,456 addresses that included public agencies, business groups, churches, schools, and community/neighborhood groups/associations within or near the project area, as well as attendees of previous RLE Project open house meetings and/or those that requested information about future Red Line projects. The postcard provided details about the open house meeting, including the closest transit access, and contact information to request assistance at the meeting. The postcard is included in Appendix A.

2.6 E-blasts

CTA sent an invitation email (e-Blast) with information about the open house meeting and links to the project website on April 17, 2014. A second email reminding recipients of the open house meeting was sent on May 12, 2014. The e-Blasts were sent to 666 and 670, respectively, email

addresses of residents who had previously demonstrated an interest in the RLE Project and/or requested information about future Red Line projects. The two e-Blasts are included in Appendix A.

2.7 Transit Alert Cards

A transit alert card providing information about the open house meeting was printed on April 30, 2014 and provided to the following locations:

- 20 alerts were produced for posting at the Red Line 95th Street Terminal station
- 370 alerts were produced for posting on all Red Line rail cars
- 350 alerts were produced for posting on all buses operating out of the 103rd Street bus garage

In total, 740 open house alerts were produced and distributed. The transit alert card is included in Appendix A.

2.8 Media

In response to the CTA announcement, a number of news articles about the RLE Project appeared in local media. Table 3 summarizes the articles that appeared in April and May 2014. The full articles are included in Appendix A.

Table 3: Published Media Articles April and May 2014

Date	Media Outlet	Article Title
4/14/2014	Chicago Sun-Times	CTA weighs two options for Red Line extension route

Section 3

Participating Agencies

CTA provided an update on the project to the RLE Project participating agencies to inform them of the project status and invite them to the Open House. Participating agencies are federal, state, and local agencies with an interest in the project because of an overlap in their area of jurisdiction or some specialized knowledge of potential project effects. The list of participating agencies and copies of the letters sent to both federal and state, regional, or local participating agencies is included in Appendix C. Responses were received from the Regional Transportation Authority, Chicago Park District, Illinois Department of Transportation, Transportation Security Administration, and Illinois Environmental Protection Agency. Responses are also included in Appendix C.

Section 4

Community Group Meetings

CTA met with local community groups to share information about the project and allow community members to ask questions. Appendix D contains the meeting presentation (the same presentation was given at each meeting), sign-in sheets, and meeting summaries. The meetings are summarized in Table 4.

Table 4: Community Group Meetings

Group Name	Meeting Date
Developing Communities Project (Leadership)	April 16, 2014
Chicago Neighborhood Initiatives Greater Roseland Chamber of Commerce	April 29, 2014
Developing Communities Project (Membership)	April 30, 2014
People for Community Recovery Golden Gate Homeowners Association	May 6, 2014
Rosemoor Community Association	May 7, 2014
Friends of the Parks Chicago Park District	May 8, 2014
Roseland Manor	May 13, 2014
Far South Side Community Development Corporation	May 14, 2014
Agape Community Center	May 15, 2014
34th Ward Town Hall	June 19, 2014

In addition to the groups with which CTA met, CTA also reached out to St. Anthony of Padua Parish and the Roseland Business Development Council in April 2014, but did not meet with either organization.

Section 5

Open House Meeting

CTA conducted an open house meeting to inform the public about the project and to provide people with an opportunity to ask questions about the RLE Project in an informal setting.

Time: 5:30 to 7:30 p.m.
Date: Tuesday, May 13, 2014
Location: Palmer Park Gymnasium
201 E. 111th Street
Chicago, IL 60628

The meeting was held in a community center familiar to area residents, accessible by public transportation, and was ADA compliant. For the convenience of all attendees, bus lines to and from the meeting site were publicized on the flyer, notice, e-Blast, and on the website. In order to provide the greatest opportunity for community participation, the open house was scheduled in the early evening on a weekday. Spanish translation and a sign language interpreter were made available during the open house meeting.

A total of 212 people signed in at the May 13, 2014 open house. Although everyone was encouraged to sign in, there were a few additional attendees who declined to sign in. Copies of the sign in sheets are included as Appendix E.

During the open house meeting, project team members explained information presented on exhibit boards and answered project-related questions. Attendees also had the opportunity to view a video prepared by the Chicago Metropolitan Agency for Planning (CMAP) about the RLE Project. The video was played continuously during the open house, and is available online at: cmap.illinois.gov/mobility/transit/red-line. The open house provided attendees an opportunity to review the project information and give feedback about which project alternative would best meet their transit needs and the potential environmental impacts.

Photos from the meeting are included in Appendix F.

5.1 Meeting Materials

Meeting attendees were offered comment cards, a project factsheet with information on the project (available in both English and Spanish), and a glossary of terms to be consulted as they visited the project exhibit boards. The comment card allowed attendees to submit written comments during or after the open house meeting. Two specific questions were posed on the comment card:

- What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

- How do you use the following parks? (Accompanied by a table listing Wendell Smith Park, Fernwood Park, and Block Park and activities options such as “Playground,” “Community Events,” and “Other.”)

The comment card, English and Spanish project factsheet, and glossary are included in Appendix G.

CTA developed exhibit boards about the project, which were used during the open house meetings. The boards included:

- Welcome
- Red Ahead Program
- What is the RLE Project?
- Why are we preparing an Environmental Impact Statement (EIS)?
- Project Alternatives: UPRR Rail Alternative
- Project Alternatives: Halsted Rail Alternative
- Project Alternatives: BRT Alternative
- Potential Impacts to Parks
- Potential Property Displacements
- Potential Noise Impacts
- Potential Visual and Community Impacts
- Potential Effects to Historic Properties
- Impacts to Wetlands
- Temporary Construction Impacts
- RLE Project Benefits
- Project Development Process
- Stay Involved

The exhibit boards illustrated the RLE Project alternatives, potential impacts, and potential mitigation measures. Project team members provided meeting attendees with specific information related to these topics and answered questions at each exhibit board. At the “Potential Property Displacements” exhibit board, TA real estate acquisition brochures were available for distribution. Copies of the exhibit boards are in Appendix H.

5.2 Comments Received

Attendees could comment in writing during the open house or submit their comments after the open house via email or mail. Email comments could be sent to a project specific email address (RedExtension@transitchicago.com) found on the comment cards, project website, and on all notification materials. At the May 13, 2014 open house meeting, 76 people filled out and submitted comment cards. In addition, one letter, six comment cards, and fourteen emails were received following the May 13 open house meeting. All comment cards and emailed comments received as of the date of this meeting summary are included in Appendix I.

Community members were asked what specific comments or concerns they had about Red Line Extension alternatives, potential impacts, and mitigation measures. Overall, the community supports the RLE Project. They noted the following concerns and comments:

- **Property Displacements:** Commenters wanted to know how many properties would be purchased, what properties would be purchased, how owners would be compensated, and how the RLE Project would impact property values. Commenters also expressed concern regarding the potential emotional impacts of property acquisitions on long-time area residents, particularly senior citizens.
- **Community and Economic Development:** Commenters stated that communities in the project area are underserved by public transit and have been waiting for this project. Commenters would like to see the RLE project create jobs for area residents and increase economic development. Some commenters expressed concern that the RLE Project would disrupt the residential communities along the project alternative alignments.
- **Noise and Vibration:** Commenters requested additional information regarding train noise and if its vibration would affect home foundations.
- **Timeline:** Commenters requested additional information regarding the project timeline and length of construction.
- **Safety and Security:** Commenters suggested that the elevated trains could make the street darker, possibly increase crime, and decrease safety. Commenters also suggested that pedestrian safety be evaluated at stations along the UPRR tracks as well as the 130th Street Station.

- **Traffic:** Commenters expressed concern about traffic impacts related to the project. One commenter also suggested that the project would reduce congestion on I-94.
- **Alternatives Analysis:** Several commenters provided suggestions for alternate routes, modes, parking, and/or the RLE terminal station.
- **Alternative Preference:** Commenters provided preferences for both the UPRR Rail Alternative and Halsted Rail Alternative. The majority of comments that expressed a preference related to the alternatives were in support of the UPRR Rail Alternative although some commenters were in opposition to the UPRR Alternative because of property displacements. Multiple commenters opposed the Halsted Rail Alternative because of visual, noise, historic resources, and safety impacts, and because it wouldn't provide transit access to underserved communities.

The comment cards also asked how attendees use project area parks; attendees could mark multiple activities and multiple parks. Of the 82 completed comment cards, 67 filled out the section on the use of local parks. A summary of responses to the second question is shown in Table 5.

Table 5: Use of Project Area Parks

Park	Baseball / Softball / Basketball	Play ground	Walking / Jogging	Community Events	Other	I do not use this park	No Response
Wendell Smith Park	8	5	14	13	5	47	18
Fernwood Parkway	3	5	7	7	7	40	27
Block Park	1	1	7	3	3	47	26

Mayor Emanuel, CTA Announce Next Steps in Modernizing the Red Line, CTA's busiest rail line

4/17/2014

CTA Unveils First Phase of its [Red and Purple Modernization Program](#) That Will Ultimately Rebuild the Northern Section of the Red Line and the Parallel Purple Line

[Red Line Extension](#) Plan to Extend the Red Line South of 95th Street to 130th Street Moves Forward with its Environmental Process

Mayor Rahm Emanuel and CTA President Forrest Claypool today announced the first phase of its Red and Purple Modernization (RPM) program, which will completely rebuild the northern section of the Red Line and the parallel Purple Line, and beginning of the next step in a federal process to secure funding for the Red Line Extension plan, which would extend the Red Line south from 95th Street to 130th Street.

These are the latest steps in the ongoing modernization of the CTA under Mayor Emanuel.

"As a world-class city, Chicago has a world-class transit service to connect residents to jobs, education, culture and above all opportunity," said Mayor Emanuel. "CTA is investing in modernizing the Red Line as part of our strategy to create a seamless, safe, and reliable transportation system for every neighborhood."

The CTA's Red Line, which runs 24/7 along 23 miles of tracks, is Chicago's busiest rail line with about 75 million annual rides.

The Red and Purple Modernization program and the Red Line Extension project are the latest in a series of Red Line projects to modernize and extend the backbone of the CTA's rail system that have been undertaken since 2011.

With a significant portion of the Red Line built more than a century ago, the improvements would address the current need to expand capacity by building new infrastructure to accommodate growing ridership. Additional Red Line modernization projects under Mayor Emanuel include:

- Successful \$425 million replacement of the Red Line South railroad in 2013, as well as station rehabilitations.

- \$86 million renewal and rehabilitation of seven far north side stations in 2012.
- \$240 million new 95th Street Terminal, work beginning in late summer.
- \$203 million Wilson station reconstruction and track and signal replacement, major construction to begin this fall.

"These projects are the next steps in our overall vision to rebuild, modernize and expand the entire Red Line," said P President Claypool. "We're already kicking off Red and Purple Modernization by beginning reconstruction of the Wilson station this fall and continuing progress on the South Side by starting the new 95th Street Terminal this summer, following the successful completion of the Red Line South reconstruction last year. With both the Red and Purple Modernization and Red Line Extension projects, we'll replace outdated infrastructure with a modern, efficient rail, and build more than five miles of new track. Together these improvements will offer CTA customers faster, more reliable service, and increasing access to quality rail transportation for thousands of future riders."

The CTA is also moving forward with its proposed Red Line Extension plan by beginning the second step of its environmental process to ultimately finish the Environmental Impact Study, which is required to begin engineering on the plan to extend the Red Line south of 95th Street to 130th Street. Both projects will include a broad community outreach process that will begin next month to solicit community feedback on both projects and provide updates on the funding process for each project.

About Red and Purple Modernization

The RPM program will proceed in phases to fully replace old, deteriorating infrastructure and stations along the entire north branch of the Red Line and the parallel Purple Line, and will pave the way for CTA to significantly increase train capacity for the next 80 years.

This section of the Red and Purple lines carries one out of every five CTA rail rides and serves customers in some of the densest, most diverse neighborhoods in Chicago. Rush-hour ridership has jumped 40 percent in the last five years alone.

Most tracks and bridges along the Red and Purple lines are nearly 100 years old. Despite rising demand, the CTA is unable to increase capacity because of the current infrastructure's age and structural limitations. Continuing to operate a busy rail line on this outdated infrastructure results in high maintenance costs, the need for frequent repairs that disrupt service and slow travel, as well as outdated stations that can't accommodate elevators or other necessary and modern amenities.

RPM will create a completely rebuilt rail line, resulting in faster, smoother rides, modern, fully ADA accessible stations along the entire corridor and more frequent train service to alleviate overcrowding.

The first phase of the RPM improvements will include two main components:

- **Station and track modernization, Wilson to Bryn Mawr:** Completely rebuilding the Wilson, Lawrence, Argyle, Berwyn, and Bryn Mawr stations and rebuilding all tracks, support structures, bridges and viaducts for the Red and Purple lines between Lawrence and Bryn Mawr. Replacement of the Wilson station and surrounding infrastructure begins this fall. These

[About trip planners \(and more options\)](#)

stations were built originally between 1908 and 1923 and the elevated support structures date back to the 1920s. The Bryn Mawr station was last updated 40 years ago, in 1974; the remaining three stations received interim station renewal work in 2012. Reconstruction of these stations will include adding elevators at each to make them accessible to customers with disabilities. The project also includes rebuilding the tracks, signals and support structures, which will significantly improve train speeds and service reliability on the slow zone-plagued stretch. (The Wilson station project is already funded from state, federal and local sources, and is currently proceeding through a separate Environmental Assessment process.)

- **Construction of a Red-Purple bypass.** Construction of a bypass north of the Belmont station to eliminate delays and speed up train service where the Red, Purple and Brown lines currently all intersect. The current configuration requires trains on three of four tracks to stop and wait for Brown Line trains to cross, which results in more than 40 percent of weekday trains being delayed by as much as three minutes. About 150,000 rides travel through this intersection each weekday, all of which are slowed down because trains must stop and wait for signal clearance. The structure's original 1907 design makes it difficult, under present day and service demands, to provide reliable service and makes adding service extremely challenging.

"Modernizing Red Line rail service and stations strengthens our neighborhoods by making transit more reliable and ultimately generating new economic development near revitalized stations," said Ald. Harry Osterman.

"We're pleased that Mayor Emanuel and the CTA recognize the importance of safe, reliable transit in neighborhoods near the Red Line, including Andersonville, Edgewater and Uptown, and look forward to working closely with the CTA on this exciting program."

Future phases of RPM will bring the same level of infrastructure and station improvements to the remaining sections of the Red and Purple lines, from north of Belmont station to Linden station in Wilmette.

Estimated cost for the first phase of RPM is \$1.7 billion.

In November 2013, the CTA became the first transit system accepted into the Federal Transit Administration's (FTA) new Core Capacity Program that provides funding to transit systems to add capacity on existing infrastructure for future ridership growth. The RPM project is eligible for 2014 Core Capacity federal funding approved by Congress earlier this year.

About RLE

The 5.3-mile Red Line Extension project will extend south from the 95th Street Terminal through the greater Roseland community. Plans include construction of four new stations near 103rd Street, 111th Street, Michigan Avenue/116th Street and 130th Street, all with bus and parking facilities.

The RLE project will provide rapid transit rail access to a low income, transit-dependent Far South Side area that does not have direct CTA rail service. An extended Red Line will provide up to a 20-minute time savings to downtown by providing one-seat service, as opposed to the current bus-rail trip from 130th Street. It will also improve access to jobs and education, and foster economic development.

In 2011, the CTA received funding from the FTA to conduct the Environmental Impact Statement (EIS) for the RLE project—a major, important step in the multi-step federal process to secure approval and funding of the \$2.3 billion dollar project.

Public Input and Next Steps

The CTA will meet with community groups and host public open houses to share details and seek input on the proposed RPM and RLE projects. Members of the public can submit formal comments directly to the CTA or at public open houses where CTA and representatives will provide additional information on RPM and RLE project plans. For each project, CTA is seeking community input on the location, design, and social, economic, and environmental effects of the proposed improvements.

The **Lawrence to Bryn Mawr Modernization Open House** will be held Wednesday, May 21, at Truman Community College, 1145 W. Wilson Ave. from 5:30 p.m. to 7:30 p.m.

The **Red-Purple Bypass Open House** will be held Thursday, May 22, at the 19th District Police Station, 850 W. Addison St., from 5:30 p.m. to 7:30 p.m.

The **RLE Open House** will be held Tuesday, May 13, at Palmer Park Gymnasium, 201 E. 111th St., between 5:30 p.m. and 7:30 p.m.

Comments for either project can also be submitted by email or postal mail to:

RPM@transitchicago.com

RedExtension@transitchicago.com

Chicago Transit Authority
Strategic Planning, 10th floor
Attn: RPM Project or RLE Project
567 W. Lake Street
Chicago, IL. 60661-1465

Following public input, the CTA will deliver draft environmental studies for both RPM Phase One and RLE to the FTA as part of the process to request federal funding. Timing for construction starts on each project is dependent upon the receipt of funding for each project. By the beginning of May, the CTA will release a request for Letters of Interest and Qualifications (LIQ) for Preliminary Engineering (PE) services for Phase One of RPM.

--	--	--

You're invited to attend a CTA open house on the **Red Line Extension Project**

When and Where?

Tuesday, May 13, 2014
5:30 to 7:30 p.m.

Palmer Park Gymnasium
201 E. 111th Street
Chicago, IL 60628

This location is served by:

CTA Bus #34, #111, #119; Pace Bus #353;
and Metra Electric 111th Street (Pullman).

This facility is accessible to people with disabilities.

At the open house, you will learn more about the proposed alternatives, hear about anticipated project benefits and impacts, and have the opportunity to provide feedback.

What's New with the Red Line Extension Project?

Since the RLE Project open house meeting during the summer of 2011, we have been preparing a Draft Environmental Impact Statement (EIS) based on the technical analysis of impacts of the alternatives. Findings from this preliminary impact analysis of the alternatives will be discussed at the Open House. CTA welcomes your comments and feedback about the RLE Project alternatives and potential impacts, which will be incorporated into the Draft EIS.

This project is one part of CTA's Red Ahead Program, a comprehensive initiative for maintaining, modernizing, and expanding Chicago's most-traveled rail line.

Do you require assistance?

If you require an interpreter, including sign language services, or other accommodations at this meeting, contact Gerald Nichols, CTA Government and Community Relations, at least five days prior to the meeting at 312-681-2807 or GNichols@transitchicago.com.

Para informacion en Español, llame al 312-681-2807

Usted está invitado a una reunión
abierta al público sobre el proyecto

Extensión de la Línea Roja

¿Cuándo y Dónde?

Martes, 13 de Mayo del 2014
5:30 p.m. a 7:30 p.m.

Gimnasio de Palmer Park
201 E. 111th Street
Chicago, IL 60628

Este lugar es accesible por: Las rutas de
autobus #34, #111, #119; Autobús Pace #353;
y Metra Electric 111th Street (Pullman).

Las instalaciones son accesibles para las
personas con discapacidad.

Durante la reunión, usted se informará acerca de las alternativas propuestas y los beneficios e impactos anticipados. También tendrá la oportunidad de compartir sus preferencias y sugerencias.

¿Qué hay de nuevo con la Extensión de la Línea Roja?

Desde la última reunión de la Extensión de la Línea Roja en el verano del 2011, CTA ha estado preparando el borrador de la Declaración de Impacto Ambiental, basada en el análisis técnico de los impactos de las alternativas. Las conclusiones de este análisis preliminar de las alternativas será discutido en la reunión. CTA con gusto acepta sus comentarios y sugerencias acerca de las alternativas y los impactos del proyecto de Extensión de la Línea Roja, los cuales serán incorporados en el borrador de la Declaración de Impacto Ambiental.

Este proyecto es una parte del programa *Red Ahead Program* de la CTA, una iniciativa comprensiva para mantener, modernizar y extender la línea de tren más usada en Chicago.

¿Requiere Asistencia?

Si usted necesita un intérprete, incluyendo servicios de lenguaje de señas, u otros servicios especiales durante la reunión, comuníquese con Gerald Nichols, oficial de relaciones gubernamentales y comunitarias para la CTA, al (312) 681-2807 o GNichols@transitchicago.com por lo menos cinco días antes de la reunión.

Llame al 312-681-2807 para información en español

About the Red Line Extension

Connecting 95th Street Station to 130th Street

Overview

The Chicago Transit Authority (CTA) is proposing to make transportation improvements by extending the Red Line from the 95th Street Terminal to the vicinity of 130th Street. This project is one part of the [Red Ahead](#) Program to extend and enhance the entire Red Line.

[See a PDF summary of the project](#)

Purpose & Need

The purpose of the Red Line Extension is to:

- Reduce commute times for residents both within and south of the project area.
- Improve mobility and accessibility for low-income and transit-dependent residents in the project area.
- Improve rapid transit rail service to isolated areas and provide viable linkages to affordable housing, jobs, services, and educational opportunities, thereby enhancing livability and neighborhood vitality.
- Improve connections and linkages of public transportation modes in the project area.
- Foster economic development in the project area, where new stations/stops may serve as catalysts for neighborhood revitalization and help reverse decades of disinvestment in local business districts.

The RLE Project is needed to respond to the following problems:

- Transit trips to jobs are longer for Far South Side residents compared to the Chicago region as a whole.
- Transit-dependent populations lack direct access to rapid transit rail service.
- The project area is geographically isolated from major activity centers and lacks viable transportation options, which limits access to affordable housing and supporting infrastructure.
- Existing transit markets are underserved and transit connectivity is challenging in the project area.
- Disinvestment and limited economic development in the project area have

negatively impacted Far South Side communities.

Project Alternatives

Several alternatives, which included different routes and technologies, were considered during the Alternatives Analysis process. The alternatives were then narrowed down through public and agency feedback to the four alternatives described here. These alternatives are being analyzed in the Draft Environmental Impact Statement.

No Build Alternative

The No Build Alternative is defined as the existing transportation system plus any committed transportation improvements that are already in the Chicago Metropolitan Agency for Planning (CMAP) Fiscal Year 2010-2015 Transportation Improvement Program (TIP). All elements of the No Build Alternative are included in each of the other alternatives.

The No Build Alternative would include the following:

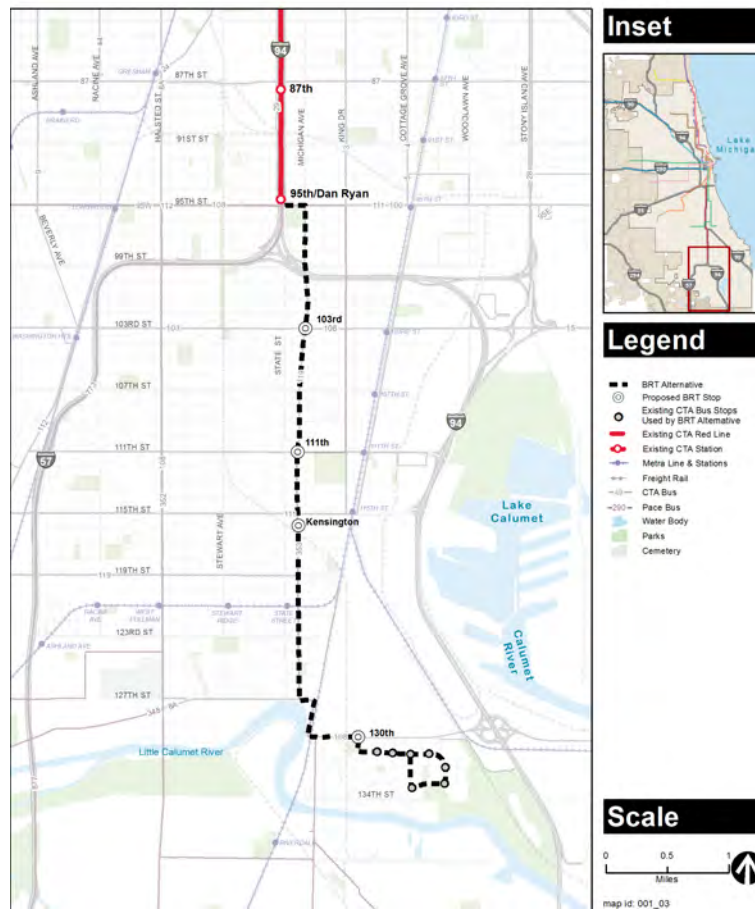

- Existing transportation system
- Committed transportation improvements including bridge reconstructions, [95th Street Terminal Improvement Project](#), several road improvement projects including resurfacing and coordination of signal timing, work on Metra's facilities, construction of a bicycle/pedestrian multi-use trail, and preservation of historic facilities
- Bus transit service focused on the preservation of existing services and projects

Bus Rapid Transit (BRT) Alternative

The proposed Bus Rapid Transit (BRT) Alternative (formerly referred to as the transportation system management alternative) would operate between the existing 95th Street Terminal and the intersection of 130th Street and Eberhart Avenue via East 95th Street, Michigan Avenue, East 127th Street, South Indiana Avenue, and East 130th Street. The BRT would operate in mixed traffic and would not include new dedicated bus lanes.

The BRT Alternative would include the following features:

- Transportation improvements that are already in the Chicago Metropolitan Agency for Planning Fiscal Year 2010-2015 Transportation Improvement Program as described in the No Build Alternative
- 5.5 mile BRT service from 95th Street Terminal with four stops at 103rd Street, 111th Street, Kensington Avenue, and 130th Street
- New park & ride facilities at all stops
- Traffic signal priority at signalized intersections along 95th Street, Michigan Avenue, and 130th Street

Union Pacific Railroad (UPRR) Rail Alternative – Locally Preferred Alternative

The proposed UPRR Rail Alternative would extend the heavy rail transit line from the existing Red Line 95th Street Terminal to 130th Street. The UPRR Rail Alternative would operate on an elevated structure heading south from 95th Street along the I-57 Expressway for nearly one-half mile until reaching the UPRR corridor in the vicinity of Eggleston Avenue. The alignment would then turn south along the UPRR corridor to approximately 111th Street where it would turn southeast. East of South Prairie Avenue, the alignment would cross over the Canadian National/Metra Electric tracks near 119th Street, where it would transition to an at-grade profile and then continue southeast along the Northern Indiana Commuter Transportation District Chicago South Shore & South Ben Railroad (NICTD/CSS & SBRR) right-of-way using a portion of the Indiana Harbor Belt (IHB) alignment to terminate at 130th Street. The UPRR Alternative was selected by the Chicago Transit Board as the Locally Preferred Alternative on August 12, 2009.

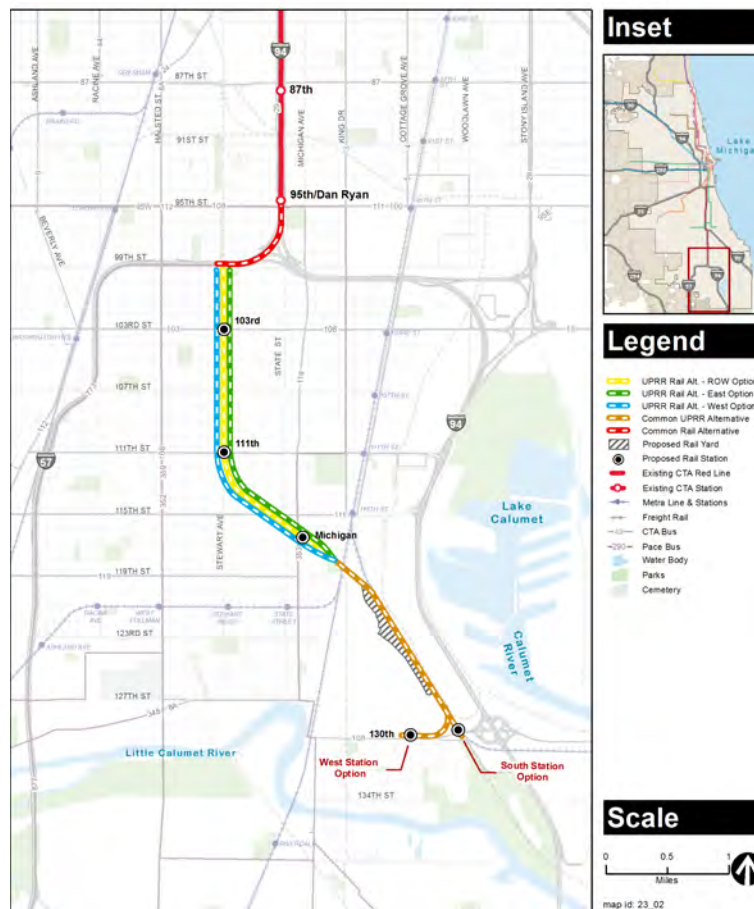

The Locally Preferred Alternative would include the following features:

- Transportation improvements that are already in the Chicago Metropolitan Agency for Planning Fiscal Year 2010-2015 Transportation Improvement Program as described in the No Build Alternative
- 5.3-mile heavy rail transit line extension from 95th Street Terminal to 130th Street
- Four new stations at 103rd Street, 111th Street, Michigan Avenue, and 130th Street
- New park & ride and bus terminal facilities at each station
- Bus transit service from the south to the new stations for faster travel to downtown Chicago
- New yard and shop at 120th Street

Three alignment options are being studied in the Draft EIS:

- **Right-of-Way (ROW) Option**
The ROW Option was identified during the environmental analysis. As part of this option, the UPRR freight trains would relocate to another area (as part of a separate project), and new elevated CTA Red Line tracks would be built in the space where the Union Pacific freight rail tracks are now. This option would be contingent upon the UPRR relocating. The Chicago Department of Transportation (CDOT) has been working with the affected railroads to assess the technical and operational feasibility of such relocation. The results of CDOT's analysis will help to inform the feasibility of this new option.
- **East Option**
As part of the East Option, CTA tracks would be placed immediately adjacent to the UPRR right-of-way to the east.
- **West Option**
As part of the West Option, CTA tracks would be placed immediately adjacent to the UPRR right-of-way to the west.

Two options for the 130th Street terminal station are being studied in the Draft EIS. The South Station Option would be located to the west of the NICTD/CSS & SBRR right-of-way at 130th Street. The West Station Option would be located along the north side of 130th Street to the west of the NICTD/CSS & SBRR route.

[Click to view larger size](#)

Halsted Rail Alternative

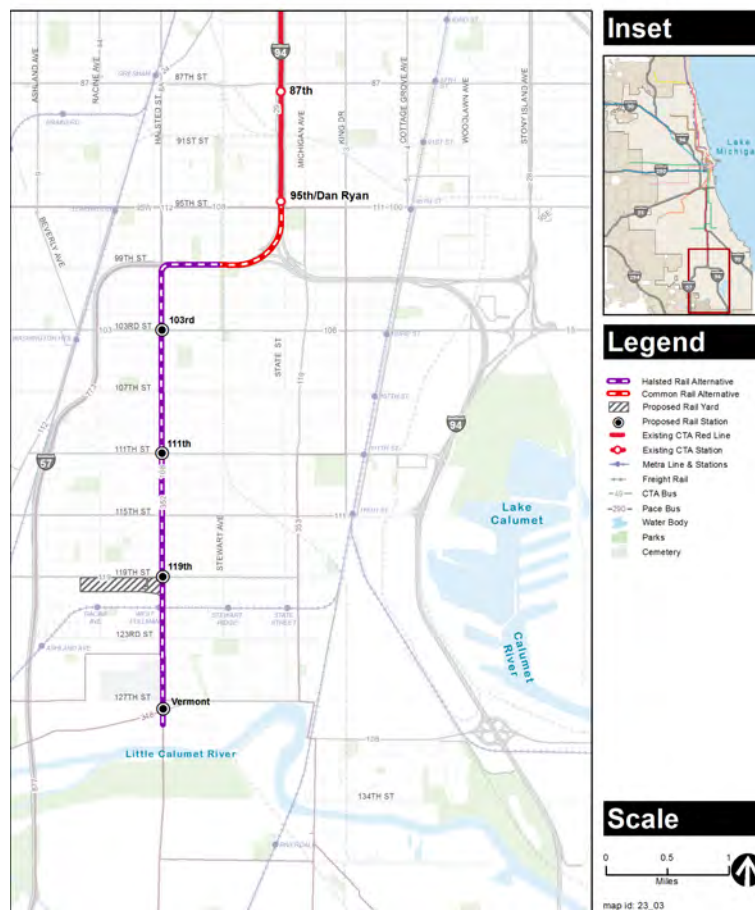

The proposed Halsted Rail Alternative would extend the rail line from the existing 95th Street Terminal to the intersection of Halsted Street and Vermont Avenue near 127th Street.

The Halsted Alternative would operate on an elevated structure between the existing 95th Street Terminal and the intersection of Halsted Street and Vermont Avenue near 127th Street. The alignment would follow the median of the I-57 Expressway until reaching Halsted Street. It would then turn south

onto Halsted Street and continue to Vermont Avenue.

The Halsted Alternative would include the following features:

- Transportation improvements that are already in the Chicago Metropolitan Agency for Planning Fiscal Year 2010-2015 Transportation Improvement Program as described in the No Build Alternative
- 5-mile heavy rail transit line extension from 95th Street Terminal to the intersection of Halsted Street and Vermont Avenue
- Four new stations at 103rd Street, 111th Street, 119th Street, and Vermont Avenue
- New park & ride facilities at each station
- Bus transit service from the south to the new stations for faster travel to downtown Chicago
- New yard and shop at 119th Street

RED AHEAD

Red Line Extension

Environmental Review

Overview

The National Environmental Policy Act (NEPA) requires evaluation of potential environmental impacts associated with federal projects and actions. In accordance with the NEPA, the Chicago Transit Authority (CTA) and the Federal Transit Administration (FTA) are preparing an Environmental Impact Statement (EIS) that will evaluate the environmental effects of constructing and operating the proposed extension.

Environmental Impact Statement

The CTA is currently in the process of preparing a Draft EIS. The Draft EIS will include an evaluation of the [No Build Alternative](#), the [BRT Alternative](#), the [UPRR Rail Alternative](#), and the [Halsted Rail Alternative](#). The Draft EIS will describe the alternatives, the existing environmental setting, the potential impacts from construction and operation of the alternatives, and proposed mitigation measures to reduce or eliminate potential impacts.

The purpose of the EIS is to study, in a public setting, the effects of the proposed project and its alternatives on the quality of the physical, human and natural environment. Areas to be evaluated for potential impacts from construction and operation of the proposed project include, but are not limited to:

- Transportation
- Land use and economic development
- Displacement and relocation of existing uses
- Neighborhood and community
- Visual and aesthetic
- Noise and vibration
- Safety and security
- Historic and cultural resources
- Hazardous materials
- Air quality
- Wetlands
- Water quality
- Floodplains
- Vegetation and wildlife habitat
- Threatened and endangered species
- Geology and soils
- Energy
- Environmental Justice

The evaluation will reveal the extent to which the proposed project will or will not affect these areas. Measures to avoid, minimize, and mitigate potential adverse impacts will also be identified and evaluated.

To keep you informed about the proposed Red Line Extension Project, a newsletter was sent out in Summer 2013 and is available [here](#).

Schedule

The CTA expects to publish the Draft EIS in early 2015 for public review. The public will have an opportunity to comment on the published Draft EIS during

a 45-day public comment period. During the review period, CTA will host public hearings to receive comments on the Draft EIS from the public and agencies. The CTA will then prepare a Final EIS that will include responses to public comments received in Draft EIS, the environmental analysis of the single NEPA Preferred Alternative, and a list of committed final mitigation measures.

The FTA will consider the Final EIS and prepare a Record of Decision (ROD) selecting the preferred alternative including mitigations for adverse impacts. Issuance of the ROD indicates that CTA has satisfied all of the requirements of the NEPA. The issuance of the ROD will allow CTA to move forward with engineering and construction of the project.

The project schedule is dependent on federal reviews and approvals and funding availability.

August 2011 Open House

The CTA hosted an Open House in August 2011 to keep the public informed about the proposed Red Line Extension.

Tuesday, August 2, 2011, 6:00 p.m. to 8:30 p.m.
St. John Missionary Baptist Church
211 E. 115th Street, Chicago, IL 60628

[Open House Exhibit Boards – August 2011](#)

Scoping and Scoping Meetings

The process of determining the scope, focus, and content of an EIS is known as "scoping." Scoping meetings are an opportunity to obtain information from the public and governmental agencies. The scoping process asks agencies and interested parties to provide input on the proposed alternatives, the purpose and need for the project, the proposed topics of evaluation, and potential effects and mitigation measures to be considered.

The official public comment period for scoping concluded on October 27, 2009. The comments received are summarized in the Scoping Report. Input received during scoping is used to refine the project purpose and need and alternatives, and to direct the analysis of environmental impacts. Public input is also used to help planners avoid potential impacts, and to identify potential mitigation measures.

Alternatives Analysis

The purpose of the Alternatives Analysis (AA) Study, which ended in August 2009, was to examine a wide range of potential transportation options. In the AA process, the project's purpose and need were identified, alternatives that meet the purpose and need were developed and evaluated, and comprehensive and ongoing public involvement was initiated. Many different transportation alternatives were identified in the AA process. Based on public comment and an evaluation of those options against criteria that included cost, environmental factors, and feasibility considerations, the number of options was narrowed. There were three screening stages and the results of each screening stage were presented at public meetings. At each stage, there was an opportunity for the public to review and comment on the results. The end result of the AA process was the selection of a Locally Preferred Alternative by the Chicago Transit Board on August 12, 2009.

Screen 1 Analysis

The CTA held public open houses to receive input on preliminary findings from Screen 1 of the Alternatives Analysis Study for the proposed Red Line Extension.

Tuesday, April 10, 2007, 6-8 p.m.
Chicago State University, New Academic Library, 4th Floor Auditorium
9501 S. King Drive, Chicago, IL 60628

Wednesday, April 11, 2007, 6-8 p.m.
West Pullman Branch, Chicago Public Library
830 W. 119th St., Chicago, IL 60628

[Environmental Review](#)
[FAQ](#)

Red Line Extension Project: FAQ

The Chicago Transit Authority (CTA) knows residents and potential Red Line riders have questions about this proposed extension.

Q: How would CTA fund this proposed project?

A: Two types of funding are needed for the proposed extension – capital and operating. Capital funding (construction funding) for the proposed extension is provided partially by the Federal Transit Administration (FTA), through its “New Starts” grant program. This program provides funding for major public transit infrastructure projects throughout the United States through a highly competitive process. CTA is currently in the environmental review phase of that process that will allow the agency to apply for funding. Upon successfully advancing through the FTA's process, a project would be qualified to receive a Full Funding Grant Agreement (FFGA) from the Federal Transit Administration. The FFGA typically covers about half of a project's capital cost. Other non-federal funds will comprise the remainder of capital funding. Once the proposed extension is built and operational, CTA's operating budget would support day-to-day service.

Q: When would the extended Red Line be open for use?

A: No timeline has yet been established. Project schedule is dependent on federal reviews and approvals and funding availability.

Q: When would construction begin on the proposed Red Line Extension?

A: No timeline has yet been established. Project schedule is dependent on federal reviews and approvals and funding availability.

Q: What will be the operating hours for the proposed extension?

A: In the current project planning phase, the operating hours for the proposed extension are assumed to be the same as for the current Red Line, which operates 24 hours every day of the year.

Q: Would CTA need to buy private property because of the location of the proposed extension?

A: Yes, CTA would need to buy private property for each of the build alternatives. The number of properties impacted varies by alternative; between approximately 52 and 259 properties could be impacted. Final property acquisition requirements would be confirmed as project engineering proceeds. Property owners will be paid not less than fair market value for their land and buildings, and may be eligible for compensation equal to the original purchase price of the property. They would also be assisted in relocating their businesses or dwellings, per the Federal Uniform Act on

relocation assistance and property acquisition. When a single alternative or option is chosen, CTA will work with the community and property owners (including the UPRR) to minimize property impacts.

Q: Will there be places to park near the new stations?

A: New park & ride lots are proposed at each new station.

Q: How would this proposed extension impact the natural environment and the community?

A: Potential impacts to the environment are being studied in the Draft Environmental Impact Statement (EIS). The Draft EIS will:

- Identify and evaluate measures to avoid, minimize and mitigate adverse impacts.
 - Describe the potential environmental effects of the proposed Red Line Extension improvements and the steps that will be taken to alleviate them.
- Typically, environmental reviews for proposed transit projects address:

- Transportation
- Land use and economic development
- Displacement and relocation of existing uses
- Neighborhood and community
- Visual and aesthetic
- Noise and vibration
- Safety and security
- Historic and cultural resources
- Hazardous materials
- Air quality
- Wetlands
- Water quality
- Floodplains
- Vegetation and wildlife habitat
- Threatened and endangered species
- Geology and soils
- Energy
- Environmental Justice

Q: How would this proposed extension impact noise in the community?

A: The Draft Environmental Impact Statement (EIS) will evaluate the potential for noise impacts to the surrounding community. If it is determined that there could be noise impacts, then mitigation measures to reduce those impacts would be proposed in the Draft EIS such as welded rail, closed deck structures, and noise barriers. During the public review of the Draft EIS, you will have an opportunity to review and comment on the analysis and the proposed mitigation measures.

Q: What is the economic impact of this proposed extension?

A: The Draft Environmental Impact Statement (EIS) will evaluate the fiscal and economic benefits and potential impacts of the proposed extension. During the public review of the Draft EIS, you will have an opportunity to review and comment on the economic analysis. Numerous transit studies suggest that transit investments result in economic development. CTA estimates between 2,600 and 4,100 jobs would be created during Red Line Extension construction. In addition, new stations may serve as catalysts for neighborhood revitalization and help reverse decades of disinvestment in local business districts.

Q: How would the proposed Red Line Extension affect current CTA services, both during construction of the new service and during operation of the new service?

A: The specifics of construction for the proposed Red Line Extension have not been established yet. CTA's general guidelines minimize the effects of construction on existing transit services. However, bus reroutes are possible. Once the proposed extension is complete, existing bus routes may be changed to complement the new high-capacity transit service. Depending on the specific route of the service, the number of routes feeding into the 95th

Street Terminal may be reduced, which would also reduce congestion in and around this facility.

Q: Is it possible that at some point this proposed Red Line Extension could go even farther to the Gary Airport and South Bend, Indiana?

A: At this point CTA's proposal for the Red Line Extension is limited to the project's defined study area, which is bounded by the Little Calumet River and 134th Street on the South. Any initiative to further expand service to the Gary Airport and South Bend, Indiana, would merit further investigation and its own planning study.

Q: If the CTA already has a Locally Preferred Alternative, why is the Draft Environmental Impact Statement (EIS) still studying two other build alternatives?

A: The federal National Environmental Policy Act (NEPA) process requires that we evaluate a range of alternatives in the EIS along with the [Locally Preferred Alternative](#) and a [No Build Alternative](#) (which looks at the existing transportation system, plus any committed transportation improvements that already are in the Chicago Metropolitan Agency for Planning Fiscal Year 2010 to 2015 Transportation Improvement Program). Other alternatives to be evaluated in the Draft EIS would include a [Bus Rapid Transit Alternative](#) and an elevated transit line along [Halsted Street](#) (which would not impact any parkland but could have other impacts). Federal law protects parklands from use by transportation projects unless there are no feasible or prudent alternatives that avoid the use of parklands. Project planning must include all possible planning to minimize harm to parklands and therefore, the Halsted Alternative will be evaluated in further detail in the Draft EIS. Based on the environmental analysis and public feedback received in the Draft EIS, a single NEPA preferred alternative will be selected and proposed in the Final EIS.

Q: For the Locally Preferred Alternative near the Union Pacific Railroad (UPRR) tracks, has CTA talked with Union Pacific representatives?

A: CTA has had preliminary conversations with UPRR and will continue to coordinate with the railroad as plans proceed. The UPRR requires that the CTA tracks be located at least 50 feet from the existing freight tracks due to safety considerations.

Q: Can engineering design be done at the same time as the Environmental Impact Statement is being drafted?

A: As part of the new Moving Ahead for Progress in the 21st Century Act (MAP-21) policy, environmental review is completed during the Project Development Phase. The Engineering Phase is the next step, during which engineering and design is completed. The timing for the Engineering Phase is subject to funding availability and federal approvals. Currently, CTA has not secured approval and funding for the Engineering Phase.

Q: How does work on the other Red Ahead projects affect progress on the Red Line Extension?

A: Red Line Extension project is one part of the [Red Ahead Program](#) to extend and enhance the entire Red Line. The Red Ahead program consists of separate projects with their own separate sources of potential funding and timelines. These projects are mutually beneficial and are combined into the Red Ahead program to ensure that they are coordinated efficiently.

Q: What portion of the extension would be elevated?

A: The UPRR Rail Alternative would operate on an elevated structure from approximately 95th Street up to 119th Street, where it would transition to an at-grade profile and then continue at grade before terminating in the vicinity of 130th Street. The terminal station would be at-grade, whereas other stations would be elevated. The Halsted Rail Alternative would operate on an elevated structure from 95th Street to the intersection of Halsted Avenue and Vermont Avenue and all stations on this alternative would be elevated.

Q: Would this extension connect to existing Metra Electric or South Shore services?

A: There is potential for connection of the proposed Red Line Extension to the Northern Indiana Commuter Transportation District (NICTD) South Shore Commuter Rail Line in the vicinity of 130th Street, where the two lines would

be adjacent to each other. This potential connection will be explored in further detail during the engineering phase. A connection between the Red Line Extension and Metra Electric District at Kensington/115th Street station is not possible, as the proposed Red Line Extension routing crosses the Metra Electric District Line approximately one-half mile to the south of the Kensington/115th Street station.

Q: Is CTA coordinating with Metra on the Red Line Extension?

A: CTA is coordinating with Metra on our progress with the Red Line Extension project. Metra is a participating agency in the environmental review process for the Red Line Extension.

You're invited to attend a CTA open house on the **Red Line Extension Project**

Since the RLE Project open house meeting during the summer of 2011, we have been preparing a Draft Environmental Impact Statement (EIS) based on the technical analysis of impacts of the alternatives. Findings from this preliminary impact analysis of the alternatives will be discussed at the Open House. CTA welcomes your comments and feedback about the RLE Project alternatives and potential impacts, which will be incorporated into the Draft EIS.

This project is one part of CTA's Red Ahead Program, a comprehensive initiative for maintaining, modernizing, and expanding Chicago's most-traveled rail line.

When and where?

**Tuesday, May 13, 2014
5:30 to 7:30 p.m.**

Palmer Park Gymnasium
201 E. 111th Street
Chicago, IL 60628

*This location is served by:
CTA Bus #34, #111, #119;
Pace Bus #353; and Metra
Electric 111th Street (Pullman).*

*This facility is accessible to
people with disabilities.*

You're invited to attend a CTA **OPEN HOUSE**

on Red Line Extension (RLE) Project

Since the last RLE Project open house meeting during the summer of 2011, CTA has been preparing a Draft Environmental Impact Statement (EIS) to evaluate the impacts of three potential build alternatives for the project. At the open house, you will learn more about the proposed alternatives, hear about anticipated project benefits and impacts of the alternatives under consideration, and have the opportunity to provide feedback. CTA welcomes your comments about the RLE Project alternatives and potential impacts, which will be incorporated into the Draft EIS.

Learn More About the Project!

CTA encourages you to visit the [RLE webpage](#) to get more information about the project. The RLE Project is one part of the [Red Ahead](#) Program, a comprehensive initiative for maintaining, modernizing and expanding Chicago's most traveled rail line. Thank you for your continued interest.

CTA weighs two options for Red Line extension route

TUE, 04/15/2014 - 6:13PM

FRAN SPIELMAN AND ROSALIND ROSSI

@FSPIELMAN | EMAIL

The CTA has narrowed to two the routes for a long-awaited Red Line extension from 95th to 130th Street — one down the middle of busy Halsted Street, the other mostly running along existing freight tracks.

Ald. Anthony Beale (9th), whose South Side ward would be most heavily affected by the extension, was briefed on the options Tuesday. The chairman of the City Council's Transportation Committee emerged with a ringing endorsement of the alternative that steers clear of Halsted.

That option for the \$2 billion, 5-mile-plus extension generally follows freight tracks operated by the Union Pacific Railroad. A large portion of the tracks run along Eggleston — four blocks west of the existing 95th Street station — and curve eastward as they move farther and farther south.

The CTA's plan calls for four new stations: at 103rd, 111th, 115th and 130th, with a combined total of up to 2,000 "Park & Ride" spaces, the alderman said.

In addition, construction of a new, \$240 million station at the end of the current Red Line, at 95th Street, is due to begin this year and follows massive improvements to Red Line track from Cermak to 95th, completed last October.

"Halsted Street is wide open. Putting elevated tracks down the middle of the street would disrupt the integrity and cosmetics of Halsted. It would hurt existing businesses. I don't think anybody wants that," Beale said.

CTA President Forrest Claypool could not be reached for comment on Tuesday's briefing.

Union Pacific spokesman Mark Davis said Tuesday that the CTA approached the railroad about the possibility of extending the Red Line about a year ago and "we haven't heard anything back since."

However, Davis said, "If they want to approach us again, I'm sure our team would be happy to talk with them."

Davis noted that CTA trains, which are powered by an electrified third rail, cannot travel on the same tracks as diesel freight trains.

That means the option Beale favors would require the CTA to build its own tracks, either alongside the UP track or above them. Elevating the tracks could present its own set of problems, considering the hazardous materials freight trains sometimes carry. Davis did not immediately know whether any hazardous materials are transported on the portion of UP track in question.

Either way, the CTA would be required to obtain right-of-way from the railroad, Davis said. Another question is whether UP owns a wide enough right-of-way to allow another set of tracks to be built.

"From a safety standpoint, putting a commuter train next to freight lines — you need wider areas. It's a complex negotiation to make that happen," Davis said.

Mayor Rahm Emanuel campaigned on a promise to rebuild the 95th Street station and extend the Red Line South to 130th Street.

The mayor also sold aldermen on his risky, \$425 million plan to close the Red Line for five months with the argument that the line needed to be rebuilt before it could be extended.

Now that the possible routes for an extension have been narrowed from five to two, the next step is an exhaustive set of community hearings to decide which option South Side residents favor and how much parking they want at each station.

Beale called it “phase four” of seven or eight hurdles that must be cleared before construction can begin — in three or four years, at the earliest.

The biggest question is whether the CTA can persuade the federal government to bankroll the \$2 billion project.

Beale believes the chances are good and not just because of the clout Emanuel carries as a former North Side congressman who served as White House chief-of-staff under President Barack Obama.

“That’s a huge ask from the federal government. But, we’ve been talking about the Red Line extension since I was a kid. Since I’ve been chairman, I’ve made this a priority. So has the mayor. I have all the confidence in the world it’s going to happen,” Beale said.

“95th Street is not the end of the city. What about people who need access to jobs downtown and deserve the right get there in a timely manner? Now that we’ve completed the Red Line upgrade and the [\$240 million] 95th Street Station reconstruction is about to start, we can walk right into the extension that will finally complete the Red Line from one end of the city to the other.”

If federal funding falls short, Beale said the Red Line extension could be a candidate for Emanuel’s much-ballyhooed Infrastructure Trust to persuade private investors to bankroll projects Chicago can’t afford to build on its own.

That option would likely require CTA riders to pay higher fees to guarantee private investors an attractive return on their money.

“If we have to, we can look at it, but only if it’s the only way,” Beale said.

“We don’t want to put an extra fee on top [of CTA fares]. If we can get the money from the federal government, we can keep the fees down. We’re gonna

lean on the federal government for funding first. My emphasis is on the federal government — not the trust.”

The extension of the Red Line is part of the CTA’s “Red Ahead” project to extend and enhance the CTA’s most-traveled rail line. The project includes improvements on the Red Line as well as upgrades to the line it connects into at its north end — the Purple Line — all the way to the last stop, at Linden in Wilmette.

Chicago Sun-Times

CTA narrows possible routes for proposed Red Line expansion

BY FRAN SPIELMAN AND ROSALIND ROSSI Staff Reporters April 15, 2014 10:04PM

The 95th Street station is now the end of the Red Line. That station is due for a major renovation, and the CTA is looking at routes to extend the Red Line to 130th Street. | Sun-Times File Photo

The CTA has narrowed to two the routes for a long-awaited Red Line extension from 95th to 130th Street — one down the middle of busy Halsted Street, the other mostly running along existing freight tracks.

Ald. Anthony Beale (9th), whose South Side ward would be most heavily affected by the extension, was briefed on the options Tuesday. The chairman of the City Council's Transportation Committee emerged with a ringing endorsement of the alternative that steers clear of Halsted.

That option for the \$2 billion, 5-mile-plus extension generally follows freight tracks operated by the Union Pacific Railroad. A large portion of the tracks run along Eggleston Avenue until about 111th Street, then curve east.

The CTA's plan calls for four new stations: at 103rd, 111th, 115th and 130th, with a combined total of up to 2,000 "Park & Ride" spaces, the alderman said.

Construction of a new, \$240 million station at the end of the current Red Line, at 95th Street, is due to begin this year and follows massive improvements to Red Line tracks from Cermak to 95th, completed last October.

Elevated tracks "would disrupt the integrity and cosmetics of Halsted. It would hurt existing businesses. I don't think anybody wants that," Beale said.

CTA President Forrest Claypool could not be reached for comment on Tuesday's briefing.

Union Pacific “would be happy to talk” with the CTA about extending the Red Line, spokesman Mark Davis said Tuesday, but he noted CTA trains, powered by an electrified third rail, can’t use the same tracks as diesel freight trains.

That means the option Beale favors would require the CTA to build its own tracks, either alongside the UP track or above them.

Either way, the CTA would be required to obtain right-of-way from the railroad, Davis said. Another question is whether UP owns a wide enough right-of-way to allow another set of tracks to be built.

“From a safety standpoint, putting a commuter train next to freight lines — you need wider areas,” Davis said.

Mayor Rahm Emanuel campaigned on a promise to rebuild the 95th Street station and extend the Red Line South to 130th Street.

Now that the possible routes have been narrowed from five to two, the next step is an exhaustive set of community hearings to decide which option South Side residents favor and how much parking they want at each station.

The biggest question is whether the CTA can persuade the federal government to bankroll the \$2 billion project.

Beale believes the chances are good and not just because of the clout Emanuel carries as a former North Side congressman who served as White House chief of staff under President Barack Obama.

“That’s a huge ask from the federal government. But, we’ve been talking about the Red Line extension since I was a kid. Since I’ve been chairman, I’ve made this a priority. So has the mayor. I have all the confidence in the world it’s going to happen,” Beale said.

“95th Street is not the end of the city.”

If federal funding falls short, Beale said the Red Line extension could be a candidate for Emanuel’s much-ballyhooed Infrastructure Trust to persuade private investors to bankroll projects Chicago can’t afford to build on its own.

That option would likely require CTA riders to pay higher fees to guarantee private investors an attractive return on their money.

“If we have to, we can look at it, but only if it’s the only way,” Beale said.

Red Line to get North Side overhaul, while South Siders decry wait

Residents react to the news that 16 buildings could be razed to make way for an expansion for the Brown, Purple, and Red line trains at Belmont.

Residents react to the news that 16 buildings could be razed to make way for an expansion for the Brown, Purple, and Red line trains at Belmont.

By Jon HilkevitchTribune reporter

8:32 p.m. CDT, April 16, 2014

The CTA said Wednesday it is moving forward with a multibillion-dollar overhaul of the Red Line's aging north branch tracks and stations, just hours after South Siders aired complaints to the agency's board that Mayor Rahm Emanuel's promised southern extension of the same rail line was moving too slowly.

CTA officials later said they also were planning a "major announcement" for Thursday about the 5 1/2-mile extension, envisioned to run from the current 95th Street terminal to about 130th Street and feature four new stops.

Despite the strong billing, however, Thursday's disclosure will focus primarily on that project moving deeper into an ongoing environmental impact study, officials said.

It's an incremental step in a long process. Ultimately, the planned rail service enhancement would provide vital transportation links to downtown and other areas of the city from some of the poorest and transit-underserved communities in the U.S., officials have said.

That's in contrast to Wednesday's more definitive announcement that four north-branch stations — Lawrence, Argyle, Berwyn and Bryn Mawr — will be replaced and that track in that area will be upgraded to allow faster trains, starting no sooner than in 2017. That work comes with a commitment of some amount of federal money and would be the first phase of a \$4 billion-plus rehab project along the Purple and northern Red lines.

And for Emanuel, getting closer to breaking ground on the extension would likely help to shore up support among African-American voters, which Tribune polling shows has fallen since his election.

But transit officials have not even hinted when construction might begin. That's because the Red Line south extension project, estimated to cost \$2.3 billion, has no funding for construction currently.

The 59,000 residents of the Greater **Roseland area are “growing impatient” with elected** officials about the slow pace of progress on the extension, the Rev. Paul Brown, representing the Zion Temple Missionary Baptist Church and the Developing Communities Project, testified before the CTA **board Wednesday. He said “a sense of urgency” is needed.**

“I simply do not understand why the communities that seem to have your attention have succeeded while we are clearly failing,” Brown said.

The CTA last year spent \$425 million to rebuild the tracks on the Red Line south branch from Cermak-Chinatown to 95th Street, cutting up to 10 minutes each way between 95th Street and downtown. A \$240 million expansion and overhaul of the crowded 95th Street terminal begins this year. But the Red Line south extension **hasn't taken off, despite pledges** from a handful of past CTA presidents dating to the mid-1990s.

Current CTA president Forrest Claypool said Wednesday that he cannot speak about earlier decisions.

“Mayor Emanuel has been here less than three years and in that three years I think this has been on a very fast trajectory,” Claypool said. **“The federal government makes it a very extensive process ... where you are basically starting from scratch as a new start. It is very onerous and time-consuming, but we are moving that as fast as possible.”**

The CTA is counting on federal funding to finance the bulk of the extension work, but current federal transportation spending legislation expires at the end of September and many experts consider it a long shot that a new spending plan will be approved soon.

There is, however, the commitment to some as-yet-unknown level of federal funding for the **CTA's modernization of the Red Line north branch and the Purple Line. The multi-year** project will involve replacing stations, deteriorated tracks and outdated signals as well as rebuild structure on a 9.6-mile stretch from north of the Belmont station through Evanston to the Linden station in Wilmette.

The overall goals are to increase capacity on the Red and Purple lines by 20 to 50 percent, reduce travel times, alleviate overcrowded station platforms and provide access for transit riders with disabilities, officials said.

The Federal Transit Administration, which allocates money for large-scale transit projects across the **nation, recently listed the CTA's Red-Purple Modernization** project as the first project in the U.S. eligible for a new pot of money under a so-called **"core capacity"** program, which is aimed at helping cities renew heavily used transit lines. No specific dollar pledge has been made yet. The U.S. Department of Transportation has recommended spending a total of \$275 million in fiscal 2015 on all eligible core capacity projects in the U.S.

The CTA said in documents released in March that it expects to seek \$1.5 billion from the FTA to begin the Purple Line and Red Line north branch work. More funding could be sought later from different pots of federal money, officials said.

The CTA said Wednesday that it will start the ball rolling by rebuilding the four contiguous stations that date to the early 1900s, as well as conduct track and structure work on the Red Line north branch, at an estimated cost of \$1.13 billion.

"Some of this infrastructure has stood since the last time the Chicago Cubs won the World Series (in 1908)," Steele said.

The Argyle and Bryn Mawr stations were built in 1908, according to the CTA. Berwyn was built in 1916 and Lawrence in 1923. The complete redo will include the installation of elevators to make the stations accessible to disabled riders.

Officials said it is too early to know how the work will affect service.

The North Side project's total cost is \$4.7 billion, according to the FTA.

In addition to the four stations, the nearby Wilson station will also be rebuilt as part of a previously announced and already funded \$203 million project that is set to begin this fall.

Meanwhile, an extension of the Red Line south branch has been sought for decades by South Siders, and at different points in time labeled as a high priority by mayors and CTA presidents. In August 2009, the CTA board made it official by voting to extend the line.

The preferred route that the CTA identified in 2009 would operate on an elevated structure that heads south from 95th Street along the median of I-57 for nearly one-half mile until reaching a corridor owned by the Union Pacific Railroad, in the vicinity of Eggleston Avenue.

It would then turn south along the UP corridor to approximately 111th Street, where it would turn southeast. East of South Prairie Avenue, the alignment crosses over the Canadian National/Metra tracks near 119th Street, where it transitions to ground level and then continues southeast along the former Michigan Central/Indiana Harbor Belt railroad right-of-way to terminate in the vicinity of 130th Street.

The extension would include four stations near 103rd, 111th, 115th and 130th streets. Each new station would include park-and-ride lots and bus terminals to serve connecting riders, officials said.

Emanuel said the Red Line extension was his No. 1 transportation priority when he was campaigning for mayor, and CTA officials say the extension remains a top priority.

But riders like lifelong Chicago resident Phyllis Johnson, who spoke at a CTA board meeting Wednesday before the agency released information on either Red Line project, **question whether it's the case.**

“What can we do to get this ball rolling to resolve this problem?” said Johnson, a resident of the Roseland community. “Wouldn’t you agree with me that it is way beyond time to extend the CTA Red Line?”

That skepticism is common on the South Side, said Ald. Howard Brookins, 21st, when reached by the Tribune on Wednesday.

“I think a lot people think that it’s so far off that it won’t occur for another 20 years,” he said.

He said South Siders tend to feel shortchanged with it comes to public transportation, because other areas of the city have multiple CTA and Metra lines.

Tribune reporter Hal Dardick contributed.

CTA plans Red Line improvements on North, South sides

By ROSALIND ROSSI Transportation Reporter April 17, 2014 1:10AM

North and South Side riders of the CTA's busiest rail line — the Red Line — should see improvements under plans outlined Wednesday.

For North Siders, the CTA could begin work as early as 2017 on a \$1.13 billion plan to upgrade track and rehab four stations, from Lawrence to Bryn Mawr.

The stations are among the oldest in the system, officials said. Bryn Mawr was built in 1908, when the Cubs last won the World Series.

The project is contingent on funding, but the CTA hopes to bankroll it with new federal "core capacity" money that can be tapped by older transit lines.

For South Siders, President Forrest Claypool insisted Wednesday that the CTA is "putting the pedal to the metal" on a long-awaited plan to extend the south end of the Red Line from 95th Street to 130th.

One CTA user, Phyllis Johnson, told CTA board members Wednesday that the extension once promised by former Mayor Richard J. Daley after the Red Line opened in 1969 is "becoming the dream deferred." Other lines have been extended or created while the Roseland community, which would be affected by an extension, has sat by with no transit developments, Johnson said.

The layers of requirements needed to win federal money for the \$2 billion project are "onerous," Claypool said, but Mayor Rahm Emanuel is "putting this on a faster trajectory than previous administrations."

Emanuel campaigned on extending the Red Line and has emphasized the project since his election, Claypool said.

“Mayor Emanuel’s mandate to us is to modernize the Red Line, from top to bottom, from north to south, and that’s what we’re doing,” Claypool said.

The CTA’s “preferred” extension method would be to run an elevated track from the 95th Street station, along Interstate 57 to 98th Street, where the elevated tracks would run parallel with some Union Pacific freight tracks to 130th Street, Claypool said. The tracks could run to the east of UP’s right of way or to the west, CTA officials said. The CTA also had considered building inside the UP’s right of way, but UP has ruled that out, a UP spokesman said.

Although the UP route is the top option, the CTA must give federal authorities at least two more, Claypool said. They include running the rail extension down Halsted Street — something local Ald. Anthony Beale (9th) opposes — or doing a less expensive bus-rapid transit route to 130th.

Beale said Tuesday he was briefed on only two plans — the UP route and the Halsted route, leading him to believe the CTA had only two options under active consideration.

“I can see how he might have perceived it that way because that’s where the focus of the conversation was,” Claypool said. “But there’s always been a federally required third alternative, which is the BRT.”

Claypool conceded that land will have to be acquired as part of the extension project, although it’s too early to say where or how many parcels.

The next step involves publication of the final environmental impact study in 2015, Claypool said.

On the North Side, the planned improvements are part of a larger project to rejuvenate the Red Line and Purple lines, from the Belmont station to the Linden Station in Wilmette. Project estimates have ranged from \$2 billion to \$4 billion.

http://chicagoist.com/2014/04/17/cta_officially_announces_red_line_s.php#photo-1

CTA Officially Announces Red Line South Extension, Red/Purple Line Renovation

A rendering of the proposed Belmont Overpass.(*Chicago Transit Authority*)

Chicago Transit Authority formally [released details](#) of its planned renovations of the Purple Line and Red Line north branch and the long planned extension of the Red Line's south branch Thursday and let's just say we're cautiously optimistic that maybe CTA has done some solid planning.

We already know the first phase of the project, set to begin in 2017, will involve rehabbing the Lawrence, Argyle, Berwyn and Bryn Mawr Red Line stations and replacing tracks for the Red and Purple Lines at those stations to reduce slow zones. CTA has started the process of securing federal funding to extend the Red Line from its current southern endpoint at 95th Street to 130th Street, using existing freight rail tracks. That project would cost \$2.3 billion.

The aspect of the Red/Purple Line rehab we're most impressed by is a "Belmont bypass" allowing the Brown Line to continue along its route by riding above the existing Red and Purple Line rails. Currently the Brown Line has to negotiate its route by crossing those rails, resulting in 40 percent of weekday trains being delayed by up to three minutes.

In order for the bypass to be built CTA will have to buy 16 buildings between Belmont Avenue and Addison Street in order to make room for the project. The total cost of the Belmont bypass is included in the \$1.7 billion cost the first phase of Red and Purple Line rehab is expected to cost. CTA has been busy with infrastructure improvements lately. They rebuilt the Red Line's south branch last year at a cost of \$425 million, spent \$86 million renovating and rehabbing seven stations on the Red Line north branch two years ago, and work will begin later this year on extensive renovations to the 95th Street and Wilson Red Line stations. "With both the Red and Purple Modernization and Red Line Extension projects, we'll replace outdated infrastructure with a modern, efficient rail, and build more than five miles of new track," CTA President Forrest Claypool said. "Together these improvements will offer CTA customers faster, more reliable service, and increasing access to quality rail transportation for thousands of future riders."

CTA Announces Plans For Red Line Extension and Rehab

Plans to extend the Red Line past 95th Street, rebuild oldest North Side stations

By [Colleen Connolly](#)

Thursday, Apr 17, 2014 | Updated 5:04 PM CDT

The CTA is planning to overhaul tracks on the North Side's Red, Brown and Purple lines, and expand Red Line service on the far South Side. Charlie Wojciechowski has details.

Red Line riders have something to look forward to in the coming years.

Chicago Transit Authority officials announced Thursday plans for rehabbing five North Side stations and building a long-awaited South Side extension. The projects are part of the first phase of the city's Red and Purple Modernization program.

The stations at Wilson, Lawrence, Argyle, Berwyn and Bryn Mawr were specified for the rehabilitation, which could begin as early as 2017. The five stations are among the oldest, having been built between 1908 and 1923.

The CTA also announced plans to build a Red-Purple Line bypass north of Belmont to eliminate delays and speed up train service where the Red, Purple and Brown Lines intersect.

On the South Side, the CTA plans to extend tracks for 5.3 miles and add four new Red Line stations south of 95th Street. Stops would be located at 103rd, 111th, 115th and 130th Streets, and up to 2,000 "Park and Ride" spaces would be added.

No date has been set to begin the construction of the new stations, but plans for the route have been narrowed down to three options. The first option is to build tracks parallel to the Union Pacific freight tracks from 98th Street to 130th Street. The

second option is to build elevated tracks above Halsted Street. The final option is to build a bus-rapid transit route to 130th Street.

Last year, the CTA [closed nine Red Line stops](#) south of Roosevelt Road as part of the Red Line South Track Renewal Project. The \$425 construction project repaired the crumbling tracks and reduced commute times.

Far South Side Residents Endorse Red Line Extension

April 18, 2014 6:11 PM

Dorothy Tucker

(CBS) – The CTA has an ambitious proposal in the works: extending the Red Line from 95th Street south to 130th, with four **new** stops along the way.

CBS 2's Dorothy Tucker has reaction from CTA riders.

Timothy Thomas rises every morning at 5 to catch the Pace bus near 130th.

"It's not always accurate," he says of the schedule.

But the bus is the only way to **connect** to the CTA train on 95th, which gets him to his job downtown. "So, if the Red Line were extended it would be great," Thomas says.

One hundred and thirtieth would be the new last stop on the Red Line extension. New, too, would be stops at 115th, 111th and 103rd. That's where Kelia Louis now catches the bus.

"That would be very convenient," Louis says.

The extension would shave 10 to 15 minutes off Louis' commute from Chicago's South Side, and even more for suburban commuters.

http://www.nwitimes.com/news/local/illinois/chicago/southeast-chicago-residents-awaiting-proposed-red-line-extension-to-th/article_b5c42660-b95d-5eff-8b39-fd190ef09e0a.html

Southeast Chicago residents awaiting proposed Red Line extension to 130th Street

April 20, 2014 1:00 am • Gregory Tejeda Times Correspondent

CHICAGO | When Peggy Salazar, of the Slag Valley neighborhood, needs to travel to downtown, her commute is longer than that of many suburban residents who live farther away.

Her community has only one Chicago Transit Authority route that leads downtown. It's a No. 30 South Chicago bus route that works its way from the Hegewisch station on the South Shore line at Brandon and Brainard avenues north to the Red Line train line at 69th Street.

"It's a long, slow kind of route," she said of the commute that can take 1 1/2 hours to complete.

Salazar and others at Chicago's southern end were interested in the news the CTA is looking at improvements on the Red Line trains.

For now, the focus is on building a bypass meant to ease congestion on CTA train lines that service North Side neighborhoods. CTA officials said they're also submitting applications to federal agencies for more funding for an expansion of the Red Line trains south to 130th Street.

CTA President Forrest Claypool said money is to complete environmental impact studies that began in 2011 and are required before engineering studies on the extension proposal can begin.

Officials said they will begin a community outreach program this spring meant to get local views on the project, while also allowing the CTA to disseminate information to the public about when the long-desired extension would begin. An open house already is scheduled for May 13 at Palmer Park gym, 201 E. 111th St.

What they're going to find is that some people already are working to prepare area businesses and residents for the day when a CTA train route extends nearly to Chicago's far southern border at 138th Street.

Michael LaFargue, president of the West Chesterfield Community Association, said his group and several other far South Side community organizations meet regularly to discuss the extension, which they say will revitalize businesses in their area by making it easier for people to travel so far south in Chicago.

“We want any businesses located near the train stations on the extension to be ready when it takes place,” LaFargue said, adding it also would allow people to work jobs outside their home neighborhoods.

“It will provide motivation for many unemployed people to go out and get a job if we make it easier for them to get to work,” he said.

LaFargue said he and other activists will be watching closely as CTA and City Hall officials act on the project.

“We’re hoping this doesn’t get bogged down by politics, because this is a very important project,” he said.

Currently, the Red Line goes south down the middle of the Dan Ryan Expressway as far as 95th Street. In 2009, the CTA’s governing board approved the concept of an extension to add stations in the Roseland neighborhood at 103rd Street, 111th Street, 116th Street and Michigan Avenue, and a final station at 130th Street near the Bishop Ford Freeway in between the Hegewisch neighborhood and the Altgeld Gardens public housing complex.

CTA officials do have an alternate route in mind that would go south along Interstate 57, then become an elevated train on Halsted Street ultimately winding up at 127th Street in Blue Island, if negotiations with the Union Pacific Railroad are unsuccessful in getting access needed to make the 130th Street extension.

But CTA officials say the route to 130th Street is the “locally preferred” route that community officials have expressed support for.

Cheryl Johnson, an Altgeld Gardens resident and head of the People for Community Recovery group, said she and her neighbors are “confident” the day will come when the extension will be built.

“Chicago is a big city that stretches so far south,” Johnson said. “It isn’t right that such a large part of it doesn’t have train access.”

She also said that with plans to build extensive parking lots around a 130th Street station to accommodate commuters, it might be possible for people from nearby suburbs such as Calumet City and Dolton to also begin using CTA trains on a regular basis.

“This would help revitalize the entire area,” Johnson said. Agreeing was Peggy Salazar, executive director of the Hegewisch-based Southeast Environmental Task Force, who said people from other parts of Chicago often have trouble getting to the 10th Ward.

“When we try to bring in interns, it is hard for them to get here if they don’t happen to drive,” she said. “If they extend the trains and put in a 130th Street bus, it would really help improve the connection between Hegewisch and the rest of Chicago.”

Multi-billion boost to Red Line

CTA PLANS TO EXPAND RED LINE TO 130TH STREET.

Posted Apr 21, 2014 by [Felicia Woron](#)

Chicago Mayor Rahm Emanuel and the Chicago Transit Authority (CTA) recently announced plans to begin renovations of the Red and Purple Lines in 2017. The CTA hopes to begin an extension of the Red Line further south after these renovations are completed.

The agency plans to replace parts of tracks on the Red and Purple Lines as well as build at least five miles of new track as an extension of the Red Line. The Red Line currently runs from 95th Street to the Uptown neighborhood, remaining parallel for much of its length to the Purple Line, which runs from the Loop to Wilmette, a suburb north of Evanston.

In a \$1.7 billion project, what CTA President Forrest Claypool described in a CTA press release as “outdated infrastructure” will be replaced with “modern, efficient rail.” Most Red and Purple Line tracks are nearly 100 years old, and a significant amount of time and money is currently spent on repairs, hindering service greatly, according to the press release. These tracks will be replaced and five stations originally built between 1908 and 1923—Wilson, Lawrence, Argyle, Berwyn, and Bryn Mawr—will be completely rebuilt, with new elevators to improve accessibility.

According to the press release, in a spot north of the Belmont station in the Lakeview neighborhood where the Red, Purple, and Brown Lines all intersect, delays of up to three minutes often occur because trains on the Red and Purple Lines must wait for Brown Line trains to cross. In order to remedy this, a bypass will be built, allowing the Brown Line to cross over the Red and Purple Lines. According to an article in *Chicagoist*, the CTA will have to buy 16 buildings between Belmont Avenue and Addison Street in order for this bypass to be built, which is included in the \$1.7 billion cost of the first phase of the project.

The second phase is a \$2.3 billion endeavor in which the Red Line will be extended from 95th Street through the Roseland community south to 130th Street, a low-income area that largely depends on public transit but lacks the infrastructure that is available in other areas. The project is expected to shorten the commute from 130th Street to downtown by 20 minutes, allowing better access to education and jobs downtown, according to the CTA press release.

http://www.progressiverailroading.com/passenger_rail/news/CTA-unveils-first-phase-of-modernization-project-Red-Line-extension-environmental-steps--40170

Rail News: Passenger Rail

CTA unveils first phase of modernization project, Red Line extension environmental steps

Chicago Transit Authority (CTA) officials late last week announced the first phase of the Red and Purple modernization program to rebuild the northern section of the Red Line and the parallel Purple Line.

They also announced the beginning of the next step in a federal process to secure funding for the Red Line extension project, which would extend the Red Line south from 95th Street to 130th Street, according to a CTA press release.

The CTA's Red Line, which runs 24/7 along 23 miles of tracks, is Chicago's busiest rail line with about 75 million annual rides.

The first phase of the Red and Purple modernization improvements will include two main components: station and track modernization from Wilson to Bryn Mawr, which entails rebuilding the Wilson, Lawrence, Argyle, Berwyn and Bryn Mawr stations and rebuilding all track, support structures, bridges and viaducts for the Red and Purple lines between Lawrence and Bryn Mawr; and construction of a Red-Purple bypass north of the Belmont Station.

The first phase of the Red and Purple modernization is estimated to cost \$1.7 billion.

The 5.3-mile Red Line extension project will extend south from the 95th Street Terminal through the greater Roseland community. Plans include construction of four new stations near 103rd Street, 111th Street, Michigan Avenue/116th Street and 130th Street, all with bus and parking facilities.

In 2011, the CTA received funding from the Federal Transit Authority to conduct the Environmental Impact Statement for the Red Line project — a major step in the multi-step federal process to secure approval and funding of the \$2.3 billion dollar project, authority officials said.

The CTA will host the following open houses to solicit public comments on the projects: May 13 for the Red Line project; May 21 for the Lawrence-to-Bryn Mawr modernization; and May 22 for the Red-Purple bypass.

Illinois Construction and Business News

IL - CTA Announces Next Steps in Modernizing the Red Line

April 23, 2014

CTA President Forrest Claypool recently announced the first phase of its Red and Purple Modernization (RPM) program.

Mayor Rahm Emanuel and CTA President Forrest Claypool recently announced the first phase of its Red and Purple Modernization (RPM) program, which will completely rebuild the northern section of the Red Line and the parallel Purple Line, and beginning of the next step in a federal process to secure funding for the Red Line Extension plan, which would extend the Red Line south from 95th Street to 130th Street.

These are the latest steps in the ongoing modernization of the CTA under Mayor Emanuel.

“As a world-class city, Chicago has a world-class transit service to connect residents to jobs, education, culture and above all opportunity,” said Mayor Emanuel. “CTA is investing in modernizing the Red Line as part of our strategy to create a seamless, safe, and reliable transportation system for every neighborhood.”

The CTA’s Red Line, which runs 24/7 along 23 miles of tracks, is Chicago’s busiest rail line with about 75 million annual rides.

The Red and Purple Modernization program and the Red Line Extension project are the latest in a series of Red Line projects to modernize and extend the backbone of the CTA’s rail system that have been undertaken since 2011.

With a significant portion of the Red Line built more than a century ago, the improvements would address the current need to expand capacity by building new infrastructure to accommodate growing ridership. Additional Red Line modernization projects under Mayor Emanuel include:

- Successful \$425 million replacement of the Red Line South railroad in 2013, as well as station rehabilitations.
- \$86 million renewal and rehabilitation of seven far north side stations in 2012.

- \$240 million new 95th Street Terminal, work beginning in late summer.
- \$203 million Wilson station reconstruction and track and signal replacement, major construction to begin this fall.

“These projects are the next steps in our overall vision to rebuild, modernize and expand the entire Red Line,” said P President Claypool. “We’re already kicking off Red and Purple Modernization by beginning reconstruction of the Wilson station this fall and continuing progress on the South Side by starting the new 95th Street Terminal this summer, following the successful completion of the Red Line South reconstruction last year. With both the Red and Purple Modernization and Red Line Extension projects, we’ll replace outdated infrastructure with a modern, efficient rail, and build more than five miles of new track. Together these improvements will offer CTA customers faster, more reliable service, and increasing access to quality rail transportation for thousands of future riders.”

The CTA is also moving forward with its proposed Red Line Extension plan by beginning the second step of its environmental process to ultimately finish the Environmental Impact Study, which is required to begin engineering on the plan to extend the Red Line south of 95th Street to 130th Street. Both projects will include a broad community outreach process that will begin next month to solicit community feedback on both projects and provide updates on the funding process for each project.

About Red and Purple Modernization

The RPM program will proceed in phases to fully replace old, deteriorating infrastructure and stations along the entire north branch of the Red Line and the parallel Purple Line, and will pave the way for CTA to significantly increase train capacity for the next 80 years.

This section of the Red and Purple lines carries one out of every five CTA rail rides and serves customers in some of the densest, most diverse neighborhoods in Chicago. Rush-hour ridership has jumped 40 percent in the last five years alone.

Most tracks and bridges along the Red and Purple lines are nearly 100 years old. Despite rising demand, the CTA is unable to increase capacity because of the current infrastructure’s age and structural limitations. Continuing to operate a busy rail line on this outdated infrastructure results in high maintenance costs, the need for frequent repairs that disrupt service and slow travel, as well as outdated stations that can’t accommodate elevators or other necessary and modern amenities.

RPM will create a completely rebuilt rail line, resulting in faster, smoother rides, modern, fully ADA accessible stations along the entire corridor and more frequent train service to alleviate overcrowding.

The first phase of the RPM improvements will include two main components:

- **Station and track modernization, Wilson to Bryn Mawr:** Completely rebuilding the Wilson, Lawrence, Argyle, Berwyn, and Bryn Mawr stations and rebuilding all tracks, support structures, bridges and viaducts for the Red and Purple lines between Lawrence and Bryn Mawr. Replacement of the Wilson station and surrounding infrastructure begins this fall. These stations were built originally between 1908 and 1923 and the elevated support structures date back to the 1920s. The Bryn Mawr station was last updated 40 years ago, in 1974; the remaining three stations received interim station renewal work in 2012. Reconstruction of these stations will include adding elevators at each to make them accessible to customers with disabilities. The project also includes rebuilding the tracks, signals and support structures, which will significantly improve train speeds and service reliability on the slow zone-plagued stretch. (The Wilson station project is already funded from state, federal and local sources, and is currently proceeding through a separate Environmental Assessment process.)
- **Construction of a Red-Purple bypass.** Construction of a bypass north of the Belmont station to eliminate delays and speed up train service where the Red, Purple and Brown lines currently all intersect. The current configuration requires trains on three of four tracks to stop and wait for Brown Line trains to cross, which results in more than 40 percent of weekday trains being delayed by as much as three minutes. About 150,000 rides travel through this intersection each weekday, all of which are slowed down because trains must stop and wait for signal clearance. The structure's original 1907 design makes it difficult, under present day and service demands, to provide reliable service and makes adding service extremely challenging.

“Modernizing Red Line rail service and stations strengthens our neighborhoods by making transit more reliable and ultimately generating new economic development near revitalized stations,” said Ald. Harry Osterman. “We’re pleased that Mayor Emanuel and the CTA recognize the importance of safe, reliable transit in neighborhoods near the Red Line, including Andersonville, Edgewater and Uptown, and look forward to working closely with the CTA on this exciting program.”

Future phases of RPM will bring the same level of infrastructure and station improvements to the remaining sections of the Red and Purple lines, from north of Belmont station to Linden station in Wilmette.

Estimated cost for the first phase of RPM is \$1.7 billion.

In November 2013, the CTA became the first transit system accepted into the Federal Transit Administration’s (FTA) new Core Capacity Program that provides funding to transit systems to add capacity on existing infrastructure for future ridership growth. The RPM project is eligible for 2014 Core Capacity federal funding approved by Congress earlier this year.

[About RLE](#)

The 5.3-mile Red Line Extension project will extend south from the 95th Street Terminal through the greater Roseland community. Plans include construction of four new stations near 103rd Street, 111th Street, Michigan Avenue/116th Street and 130th Street, all with bus and parking facilities.

The RLE project will provide rapid transit rail access to a low income, transit-dependent Far South Side area that does not have direct CTA rail service. An extended Red Line will provide up to a 20-minute time savings to downtown by providing one-seat service, as opposed to the current bus-rail trip from 130th Street. It will also improve access to jobs and education, and foster economic development.

In 2011, the CTA received funding from the FTA to conduct the Environmental Impact Statement (EIS) for the RLE project—a major, important step in the multi-step federal process to secure approval and funding of the \$2.3 billion dollar project.

Public Input and Next Steps

The CTA will meet with community groups and host public open houses to share details and seek input on the proposed RPM and RLE projects. Members of the public can submit formal comments directly to the CTA or at public open houses where CTA and representatives will provide additional information on RPM and RLE project plans. For each project, CTA is seeking community input on the location, design, and social, economic, and environmental effects of the proposed improvements.

The Lawrence to Bryn Mawr Modernization Open House will be held Wednesday, May 21, at Truman Community College, 1145 W. Wilson Ave. from 5:30 p.m. to 7:30 p.m.

The Red-Purple Bypass Open House will be held Thursday, May 22, at the 19th District Police Station, 850 W. Addison St., from 5:30 p.m. to 7:30 p.m.

The RLE Open House will be held Tuesday, May 13, at Palmer Park Gymnasium, 201 E. 111th St., between 5:30 p.m. and 7:30 p.m.

Comments for either project can also be submitted by email or postal mail to:

RPM@transitchicago.com

RedExtension@transitchicago.com

Chicago Transit Authority Strategic Planning, 10th floor Attn: RPM Project or RLE Project 567 W. Lake Street Chicago, IL. 60661-1465

Following public input, the CTA will deliver draft environmental studies for both RPM Phase One and RLE to the FTA as part of the process to request federal funding. Timing for construction

starts on each project is dependent upon the receipt of funding for each project. By the beginning of May, the CTA will release a request for Letters of Interest and Qualifications (LIQ) for Preliminary Engineering (PE) services for Phase One of RPM.

For more information about the Red Purple Modernization and Red Line Extension projects, visit transitchicago.com.

RED LINE EXTENSION PROJECT MOVING FORWARD

The CTA is moving forward with its plan to build a \$2.3 billion extension to the south end of the Red Line.

By [Leah Hope](#)

Wednesday, May 14, 2014

CHICAGO (WLS) --

The Chicago Transit Authority is moving forward with its largest expansion project in decades. The CTA is planning a \$2.3 billion extension to the south end of the Red Line.

Currently, 95th Street is the end of the line. CTA Red Line riders that go farther south rely on buses.

"It's a two and half trip for me, two buses and one 'L' train, each way from the doctor probably four or five times a month," said John Schellenbach, CTA rider.

A five-mile Red Line extension would be welcomed news to riders Eyewitness News spoke with on Wednesday.

"Out that way it's kinda hard catching the buses, you know, sometimes they're late. And just for the Red Line to go further, I think that would lessen traffic conditions also," said Sandra Cotton, CTA rider.

On Tuesday night, [CTA held an open house](#) to offer more information and get feedback. The agency is just starting the process to make the extension a reality. There are five possibilities currently, from adding new rail lines to a bus rapid transit line extended south to 130th Street.

"Our impact on natural habitats, historic properties, neighborhoods, up and down the list of concerns when you talk about churches, schools, homes," said Steve Mayberry, CTA spokesman.

A local community organization advocates for the extension to help residents in the area and the city as a whole.

"This has been something the community has desperately needed. Transit brings about business, better job opportunities, economic development," said Tiffany Hightower, Developing Communities Project.

While many support the idea of extending the Red Line, the project is still a few years out. The CTA plans to submit an environmental impact statement next year on one of those possibilities.

<http://www.chicagonow.com/cta-tattler/2014/05/nearly-100-buildings-would-be-razed-to-build-preferred-red-line-south-extension/>

Nearly 100 buildings would be razed to build preferred Red Line south extension

By **Kevin O'Neil**, Wednesday at 6:58 pm

Almost 100 residential buildings could be torn down if the "locally preferred alternative" for the the Red Line south extension were to be built. That's what the [CTA revealed](#) at a community meeting Tuesday night.

More than 250 total land parcels would have to be acquired for the "preferred" extension alternative. From the [CTA website](#):

The proposed UPRR Rail Alternative would extend the heavy rail transit line from the existing Red Line 95th Street Terminal to 130th Street. The UPRR Rail Alternative would operate on an elevated structure heading south from 95th Street along the I-57 Expressway for nearly one-half mile until reaching the UPRR corridor in the vicinity of Eggleston Avenue. The alignment would then turn south along the UPRR corridor to approximately 111th Street where it would turn southeast. East of South Prairie Avenue, the alignment would cross over the Canadian National/Metra Electric tracks near 119th Street, where it would transition to an at-grade profile and then continue southeast along the Northern Indiana Commuter Transportation District Chicago South Shore & South Ben Railroad (NICTD/CSS & SBRR) right-of-way using a portion of the Indiana Harbor Belt (IHB) alignment to terminate at 130th Street.

The Locally Preferred Alternative would include the following features:

- Transportation improvements that are already in the Chicago Metropolitan Agency for Planning Fiscal Year 2010-2015 Transportation Improvement Program as described in the No Build Alternative
- 5.3-mile heavy rail transit line extension from 95th Street Terminal to 130th Street
- Four new stations at 103rd Street, 111th Street, Michigan Avenue, and 130th Street

- New park & ride and bus terminal facilities at each station
- Bus transit service from the south to the new stations for faster travel to downtown Chicago
- New yard and shop at 120th Street

The [Sun-Times reported](#) on the impact of other alternatives:

If an elevated were built west of the UP tracks, up to 195 parcels would need to be purchased, 30 of them residential.

Another alternative, which would run the extension down the center of Halsted Street, would require seizing 110 parcels, including 17 residential ones.

A final option, involving a bus “rapid transit” system with dedicated bus lanes, would require seizing only 52 parcels, including one residential one.

In comparison, the CTA seized 40 parcels before a project to expand capacity on the Brown Line, completed in 2009.

No estimate of the maximum number of people displaced by each alternative was available.

There were lots of North Siders unhappy about just 16 buildings that would have to be razed if the [Belmont Flyover](#) is built. And yet I haven't heard the same cries on the Far South Side about the nearly 100 buildings with targets on their roofs. Maybe word hasn't gotten out yet.

CTA Could Consume 259 Properties For Red Line Extension

Wednesday, May 14, 2014, by [AJ LaTrace](#)

[photo by Flickr user [vxla](#)]

Last night at an open house, the CTA laid out its complete **\$2.3 billion** plan to extend the Red Line south to 130th Street, and revealed that in order for the ambitious expansion to happen, the transit agency would need to acquire **259 properties** along the path. The Red Line currently ends at 95th Street, and the extension would add **5.3 miles** of new track to the busy transit line. In addition to shortening commute times for South Side residents going to the Loop, the city believes that the extension would connect the neighborhoods to much needed jobs, green space, educational institutions and medical facilities. Of the 259 properties needed to complete the project, **95 contain residential buildings**. The city has been ambitious with [transit updates and expansions](#) lately, however, the Red Line extension would be the CTA's biggest since the Blue Line was extended to O'Hare in the early 80s.

Whistleblower off-base on CTA budget, Claypool says

BY ROSALIND ROSSI AND FRAN SPIELMAN Staff Reporters May 14, 2014 6:04PM

Updated: May 15, 2014 2:21AM

A former CTA employee who says he was axed for blowing the whistle on what he called unrealistic budget projections “has no clue what he’s talking about,” CTA President Forrest Claypool said Wednesday.

And the fact that, through March, the CTA’s 2013 budget is coming in at \$3.8 million less than projected is no big deal, Claypool told reporters after the CTA’s monthly meeting.

“We have another eight, nine months to deal with a two-tenths-of-one-percent variance, which is a rounding error in a budget of this size,” Claypool said.

The CTA will adjust expenses throughout the year to make sure the agency ends the year in balance, Claypool said. Some of the variance was blamed on a brutally cold and snowy January and February that left first quarter fare revenues \$3 million under projections.

Claypool’s comments came about a week after former CTA employee Casey Loop filed a whistleblower lawsuit against the transit agency, charging he was told he was being laid off less than three months after he tipped off the RTA that the CTA’s 2013 budget had been packed with what he considered unrealistic and even “astonishing” projections.

They included a \$56 million labor “credit” based on an assumption that 347 vacancies would remain vacant for an entire year, Loop said. Normally, budgets assume vacancies will not be filled for about three months, allowing for a 25 percent savings, said Loop.

However, Claypool said Wednesday the 2013 budget assumed a “reasonable” percent of the agency’s 11,000 total positions would be vacant during the year.

“Every public budget has a reasonable allowance to reflect the fact that there are savings and salvage from the fact that all those positions aren’t filled throughout the year,” Claypool said. “The CTA is no different than the city of Chicago, Cook County, the Park District.”

Claypool said Loop “just didn’t understand” and “has no clue what he’s talking about.”

Loop’s suit states he was hired in February 2012 as a CTA budget project consultant; given a raise in July 2012; promoted in June 2013 to manager of performance analysis and then told in September 2013 that he was being laid off. However, Claypool insisted Loop did not get the June promotion.

“He was not promoted,” Claypool said. “He volunteered to do some budget work, so that’s not a promotion.”

Loop’s attorney, Betty Tsamis, said Wednesday that Loop “came forward in good faith because he believes in open and transparent government.” She added: “We stand behind our pleadings.”

Claypool also told reporters the possibility that the CTA would have to acquire 259 parcels of land, including 95 residential buildings, to extend the Red Line from 95th to 130th Street was “a normal occurrence for any major extension.” Such purchases are not unusual when a transit agency must create a “brand new railroad” in an urban area, Claypool said.

Up to 259 parcels would need to be seized under one of several alternatives being considered. That particular option would place an elevated track mostly east of existing Union Pacific tracks.

Far South Side Ald. Anthony Beale (9th), chairman of the City Council’s Transportation Committee, said Wednesday he’s concerned about the number of residential and business parcels that must be seized to make way for the Red Line extension.

But the alderman said he doesn’t “want to alarm anyone” until the CTA makes a final decision on the precise route.

“At that point, we’ll make sure people are well-compensated, well-protected and not taken advantage of,” Beale said.

As for whether it’s worth displacing hundreds to improve transportation for tens of thousands, Beale said: “We have to do what’s in the best interest of the community.

That is, making sure this 40-year-old promise is kept to run the Red Line to the end of the city. If that means displacement, we can get over that hurdle.”

In other business, Claypool revealed that CTA bus drivers were expected to receive a bulletin Wednesday, reminding them to announce priority seating rules if a disabled rider is unable to find a seat. Priority seating is reserved first for the disabled, then seniors, then riders with strollers.

His comments came after Ray Yung, a disabled rider with crutches, complained that female riders with strollers have refused to give up their priority seats to him.

CTA officials also revealed that the No. 10 bus to the Museum of Science and Industry could be cancelled if its ridership does not increase. The CTA agreed Wednesday to increase the museum’s contribution for that service from \$39.28 an hour to as high as \$47 an hour over the next two years. However, the bus averages 30 riders an hour; the system average is 50 riders an hour. It needs 106 riders an hour to break even, CTA Chief Planning Officer Carole Morey said.

Museum officials said they are investing \$75,000 this year on an aggressive marketing campaign to try to boost ridership.

Chicago Sun-Times

CTA: Hundreds of parcels might be needed for Red Line expansion

BY ROSALIND ROSSI Transportation Reporter May 13, 2014 9:58PM

Updated: May 14, 2014 2:18AM

As many as 259 parcels of land — including 95 with residential buildings — could be seized as part of a Chicago Transit Authority plan to extend the Red Line to 130th Street, officials revealed Tuesday.

The \$2.3 billion, 5.3-mile project would be the biggest CTA extension in 30-some years — since the Blue Line was extended to O'Hare, CTA officials said.

About 200 Chicagoans showed up Tuesday night at the Palmer Park Gym, 201 E. 111th St., to view and discuss about two dozen posterboards outlining the project.

"There was a high level of interest," said CTA spokesman Steve Mayberry. "Folks wanted as much information as they could get."

One board in particular outlined what may be the most controversial numbers associated with the project — how many parcels would have to be seized to extend the Red Line to 130th Street from its current endpoint at 95th Street.

The CTA in 2009 selected a "preferred" route down the middle of I-57 to 98th St., and then alongside existing Union Pacific tracks to 130th.

Under that "preferred" route, if an elevated were built east of the UP tracks, a maximum of 259 parcels would need to be purchased, 95 of them residential, the posterboard indicated.

If an elevated were built west of the UP tracks, up to 195 parcels would need to be purchased, 30 of them residential.

Another alternative, which would run the extension down the center of Halsted Street, would require seizing 110 parcels, including 17 residential ones.

A final option, involving a bus “rapid transit” system with dedicated bus lanes, would require seizing only 52 parcels, including one residential one.

In comparison, the CTA seized 40 parcels before a project to expand capacity on the Brown Line, completed in 2009.

No estimate of the maximum number of people displaced by each alternative was available.

CTA Red Line project manager Carole Morey said all alternatives are “on equal footing” and further engineering analysis could reduce some displacements. The community will be asked for input at public hearings after an environmental assessment of each option is completed in 2015, she said.

At that time, Morey said, some citizens may want to endorse alternatives that displace fewer people.

“I think it’s too early to reach any conclusions,” Morey said. “We really need to hear from the community and hear their concerns.”

The extension would run through such impoverished neighborhoods as Roseland and Englewood, and, it is hoped, give businesses there a boost, Mayberry said. It also would trim 20 minutes from the commute of residents near 130th, who would need only to hop a Red line train to get downtown instead of riding a bus to 95th Street and boarding the Red Line there, Mayberry said.

By Tracy Swartz | REDEYE

You thought winter was a long season? CTA construction season can seem to last forever.

The agency is midway through projects to improve parts of the Blue and Orange line tracks, which means shuttle buses replace train service in those areas on some weekends. Meanwhile, the CTA is overhauling the Harrison Red Line stop in Printers Row, affecting Red Line service and access to that stop since last month.

The Clark/Division stop in Old Town has been undergoing a monthlong renovation that will include a new mezzanine this year. Also, a new Green Line stop at Cermak Road is underway.

And let's not forget about the projects on the horizon—the agency is scheduled to begin turning the Wilson Red Line station into a transfer point for the Purple Line

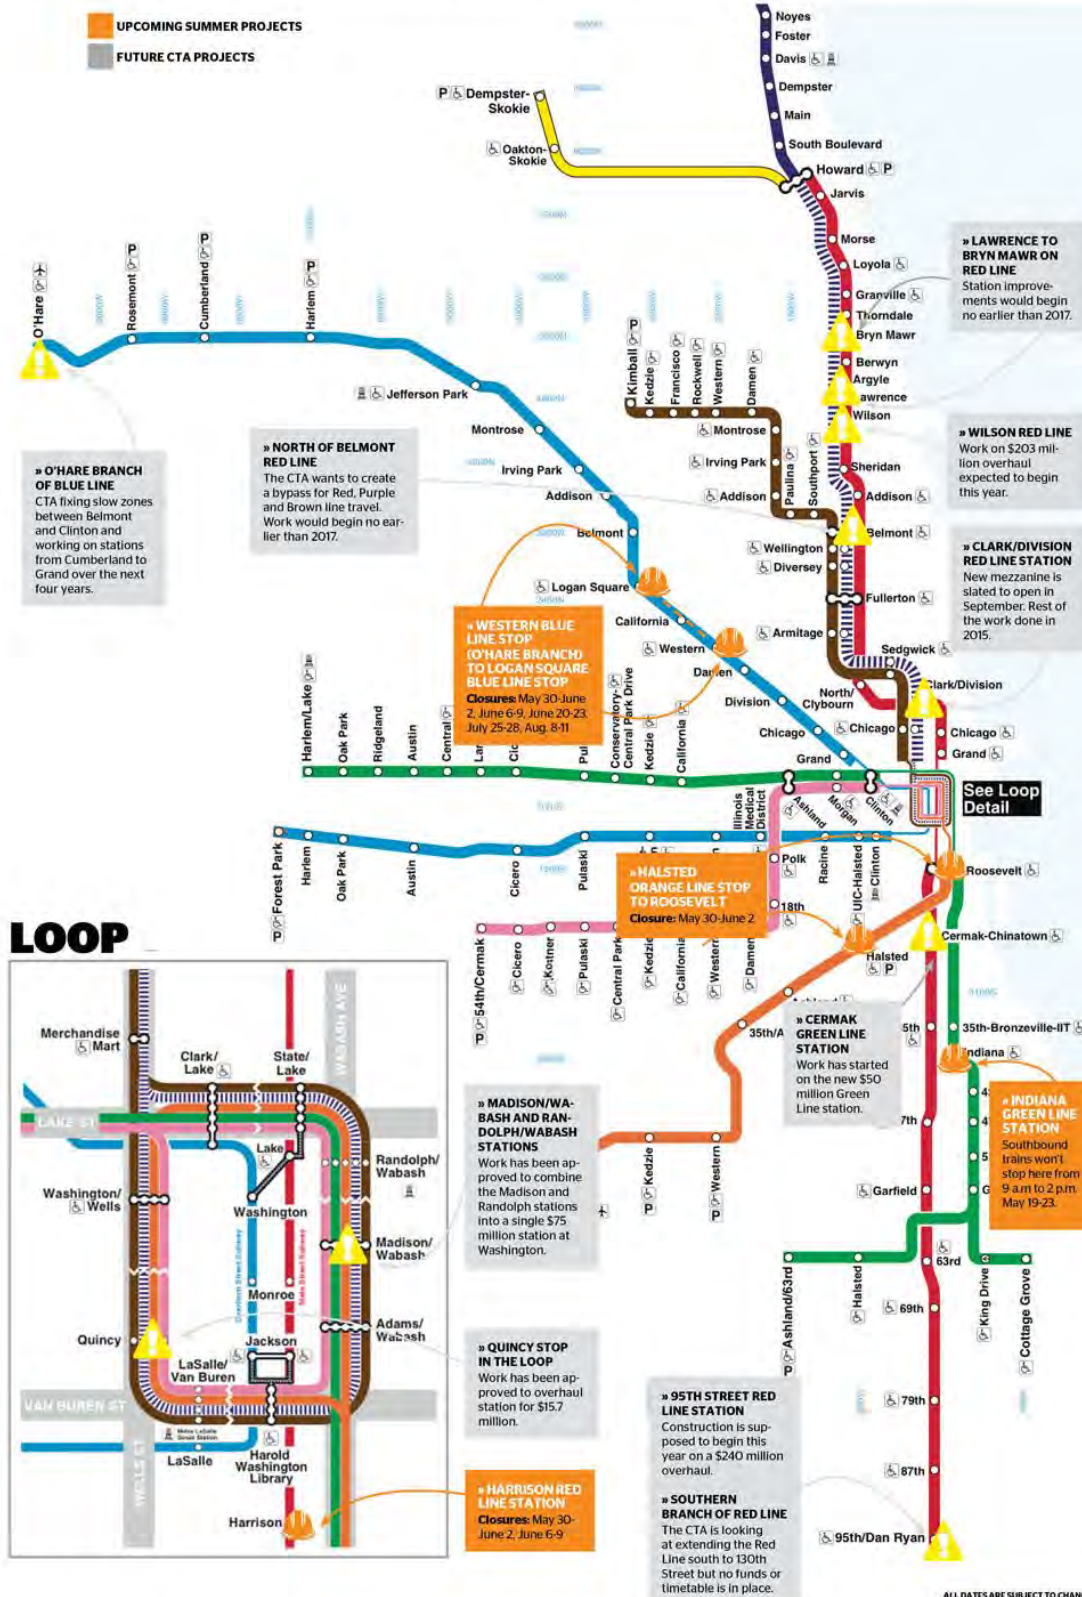

Express. Additionally, there are plans to overhaul the Quincy Loop station and the 95th Street Red Line stop and combine the Madison/Wabash and Randolph/Wabash stations into a superstation in the Loop.

Future projects that don't have timetables include overhauling Red Line stations from Lawrence to Bryn Mawr on the North Side and creating a bypass north of the Belmont stop in Lakeview to ease Red, Brown and Purple line train traffic there.

The CTA is holding a hearing about the Lawrence to Bryn Mawr modernization project 5:30-7:30 p.m. Wednesday at Truman College, 1145 W. Wilson Ave. A meeting about the Red-Purple Bypass project will be held 5:30 to 7:30 p.m. Thursday at the 19th District Police Department, 850 W. Addison St.

RedEye mapped all current and future rail construction projects below.

April 17th, 2014 Aldermanic Briefing Meeting Notes

MEETING NOTES

RE: Aldermanic Briefing – Red Line Extension Draft EIS

MEETING DATE: Thursday, April 17, 2014 - 10:00 AM

LOCATION: City Hall (406A)

ATTENDEES:

<i>Name</i>	<i>Initials</i>	<i>Organization</i>
April Branch	AB	Alderman Beale's Office
Brian Sleet	BS	Alderman Sawyer's Office
Carole Morey	CM	CTA
Eva-Dina Delgado	ED	CTA
Gerald Nichols	GN	CTA
Ald. Howard Brookins	HB	21 st Ward Alderman
Jeff Wilson	JW	CTA
Lamar Brown	LB	Alderwoman Harris' Office
Loren Harris	LH	Alderwoman Harris' Office
Sonali Tandon	ST	CTA

PREPARED BY: Sonali Tandon

ISSUE DATE:

- ED kicked off the meeting and thanked everyone for attending.
- CM gave a presentation about CTA's Red Line Extension (RLE) project and discussed:
 - the Red Ahead program and different projects that are part of it. She mentioned recent CTA board action on the 95th Street Terminal Project.
 - that CTA is pursuing New Starts federal funds for RLE and the project will have to compete with other New Starts projects in the country. Red and Purple Modernization Project, which is also part of the Read Ahead Program is pursuing Core Capacity federal funds.
 - RLE project history, previous public involvement, and project benefits
 - the Environmental Impact Statement (EIS) process and different project alternatives for RLE
 - HB commented that although Union Pacific Railroad (UPRR) Alternative was the Locally Preferred (LPA) Alternative, it doesn't seem that is where people are and the Halsted Alternative would capture more of Chicago. He also mentioned that attendees that supported the UPRR alternative in previous RLE meetings were from Roseland. He asked if CTA had analyzed population density along different alternatives.
 - potential project impacts and mitigations including park impacts and potential displacements for each alternative

- BS asked if CTA would provide grants to residents for new windows, if there are noise impacts. CM mentioned that as part of the EIS, CTA is doing detailed noise modeling to identify impacts. Mitigation measures would accordingly be identified.
 - topic areas where minimal impacts are likely to occur
 - project funding and project development process
- BS asked about Park & Ride at 95th Street Terminal. He also requested a map of proposed RLE stops in relation to Metra stops. He also mentioned that Metra stops were not in good condition and difficult locations.
- ED mentioned that CTA will be conducting small community meetings and an Open House meeting.
- RLE collaterals and flyers in English and Spanish were handed out to the attendees and the meeting was adjourned.

Mr. Matt Fuller
Environmental Programs Engineer
3250 Executive Park Drive
Springfield, IL 62703

Re: CTA Red Line Extension (RLE) Project Environmental Review Process Update

Dear Mr. Fuller:

The Federal Transit Administration (FTA) as lead agency, in cooperation with the Chicago Transit Authority (CTA) as a joint lead agency, has been working to prepare an Environmental Impact Statement (EIS) for the proposed Red Line Extension (RLE) project. The proposed project would extend the Red Line from the existing 95th Street Terminal to the vicinity of 130th Street, subject to the availability of funding.

CTA will be hosting an open house on May 13, 2014 from 5:30 p.m. to 7:30 p.m. at Palmer Park, 201 E. 111th Street, Chicago, IL 60628 to update the community on results of the environmental analysis to date and project progress. Your agency is cordially invited to attend this open house meeting. CTA continues to receive feedback on the project and potential impacts, which will be addressed in the Draft EIS. The meeting format will be an open exchange of information between the attendees and the CTA staff. There will be no formal presentation or testimony.

CTA previously held agency and public scoping meetings in September 2009, and hosted a public open house in August 2011. Since this time, CTA has been preparing the Draft EIS based on analysis of the impacts identified for each of the project alternatives. The Draft EIS is expected to be published for public review in spring 2015. The Draft EIS will document potential benefits and impacts of the Locally Preferred Alternative. This first alternative includes three possibilities: an option running along the existing freight rail tracks of the Union Pacific Railroad (UPRR) right-of-way (ROW Option), in addition to an East Option and a West Option adjacent to the UPRR tracks. The Draft EIS will also describe other build alternatives that are under consideration, including a rail alternative along Halsted Street, and a bus rapid transit (BRT) alternative along Michigan Avenue, in addition to the No Build Alternative.

In developing the Draft EIS over the last year, CTA has reached out to a number of agencies, including FHWA, regarding input on the impact assessment methodologies and the draft technical analyses in each agency's area of expertise. As the project moves forward and the Draft

EIS is further developed CTA will continue to coordinate with you on the project developments and submit a pre-draft and pre-final environmental document for your review.

Your agency has previously agreed to be a cooperating agency for this project. At this time, we would like to reconfirm your involvement as a cooperating agency and your contact information. Please respond to confirm the single point-of-contact within your organization for future coordination efforts by emailing Sonali Tandon, CTA Project Manager, at STandon@transitchicago.com with the contact's name, title, and email address. FTA and CTA will use this contact information to provide future updates about the project.

Additional information about the project is available at: transitchicago.com/RedEIS.

If you have questions regarding this process, please contact either:

Dr. Ernest Moniz
Secretary
Department of Energy
1000 Independence Ave. SW
Washington, DC 20585

Re: CTA Red Line Extension (RLE) Project Environmental Review Process Update

Dear Dr. Ernest Moniz:

The Federal Transit Administration (FTA) as lead agency, in cooperation with the Chicago Transit Authority (CTA) as a joint lead agency, has been working to prepare an Environmental Impact Statement (EIS) for the proposed Red Line Extension (RLE) project. The proposed project would extend the Red Line from the existing 95th Street Terminal to the vicinity of 130th Street, subject to the availability of funding.

CTA will be hosting an open house on May 13, 2014 from 5:30 p.m. to 7:30 p.m. at Palmer Park, 201 E. 111th Street, Chicago, IL 60628 to update the community on results of the environmental analysis to date and project progress. Your agency is cordially invited to attend this open house meeting. CTA continues to receive feedback on the project and potential impacts, which will be addressed in the Draft EIS. The meeting format will be an open exchange of information between the attendees and the CTA staff. There will be no formal presentation or testimony.

CTA previously held agency and public scoping meetings in September 2009, and hosted a public open house in August 2011. Since this time, CTA has been preparing the Draft EIS based on analysis of the impacts identified for each of the project alternatives. The Draft EIS is expected to be published for public review in spring 2015. The Draft EIS will document potential benefits and impacts of the Locally Preferred Alternative. This first alternative includes three possibilities: an option running along the existing freight rail tracks of the Union Pacific Railroad (UPRR) right-of-way (ROW Option), in addition to an East Option and a West Option adjacent to the UPRR tracks. The Draft EIS will also describe other build alternatives that are under consideration, including a rail alternative along Halsted Street, and a bus rapid transit (BRT) alternative along Michigan Avenue, in addition to the No Build Alternative.

In developing the Draft EIS over the last year, CTA has reached out to a number of participating agencies regarding input on the impact assessment methodologies and the draft technical analyses in each agency's area of expertise. As the project moves forward and the Draft EIS is

further developed, as a participating agency, you may be asked to review and comment on sections of the document. This will be your opportunity to communicate any concerns of your agency on the adequacy of the document, the alternatives considered, the anticipated impacts and proposed mitigation.

Your agency has previously agreed to be a participating agency for this project. At this time, we would like to reconfirm your involvement as a participating agency and your contact information. If you are not the right contact within your organization, or would like to designate another person for future coordination efforts, please email Sonali Tandon, CTA Project Manager, at STandon@transitchicago.com with the contact's name, title, and email address. FTA and CTA will use this contact information to provide future updates about the project.

Additional information about the project is available at: transitchicago.com/RedEIS.

This first alternative includes three possibilities: an option running along the existing freight rail tracks of the Union Pacific Railroad (UPRR) right-of-way (ROW Option), in addition to an East Option and a West Option adjacent to the UPRR tracks. The Draft EIS will also describe other build alternatives that are under consideration, including a rail alternative along Halsted Street, and a bus rapid transit (BRT) alternative along Michigan Avenue, in addition to the No Build Alternative.

In developing the Draft EIS over the last year, CTA has reached out to a number of participating agencies regarding input on the impact assessment methodologies and the draft technical

analyses in each agency's area of expertise. As the project moves forward and the Draft EIS is further developed, as a participating agency, you may be asked to review and comment on sections of the document. This will be your opportunity to communicate any concerns of your agency on the adequacy of the document, the alternatives considered, the anticipated impacts and proposed mitigation.

Your agency has previously agreed to be a participating agency for this project. At this time, we would like to reconfirm your involvement as a participating agency and your contact information. If you are not the right contact within your organization, or would like to designate another person for future coordination efforts, please email Sonali Tandon, CTA Project Manager, at STandon@transitchicago.com with the contact's name, title, and email address. FTA and CTA will use this contact information to provide future updates about the project.

Re: CTA Red Line Extension (RLE) Project Environmental Review Process Update

Dear Mr. Fred Goodine:

The Federal Transit Administration (FTA) as lead agency, in cooperation with the Chicago Transit Authority (CTA) as a joint lead agency, has been working to prepare an Environmental Impact Statement (EIS) for the proposed Red Line Extension (RLE) project. The proposed project would extend the Red Line from the existing 95th Street Terminal to the vicinity of 130th Street, subject to the availability of funding.

CTA will be hosting an open house on May 13, 2014 from 5:30 p.m. to 7:30 p.m. at Palmer Park, 201 E. 111th Street, Chicago, IL 60628 to update the community on results of the environmental analysis to date and project progress. Your agency is cordially invited to attend this open house meeting. CTA continues to receive feedback on the project and potential impacts, which will be addressed in the Draft EIS. The meeting format will be an open exchange of information between the attendees and the CTA staff. There will be no formal presentation or testimony.

CTA previously held agency and public scoping meetings in September 2009, and hosted a public open house in August 2011. Since this time, CTA has been preparing the Draft EIS based on analysis of the impacts identified for each of the project alternatives. The Draft EIS is expected to be published for public review in spring 2015. The Draft EIS will document potential benefits and impacts of the Locally Preferred Alternative. This first alternative includes three possibilities: an option running along the existing freight rail tracks of the Union Pacific Railroad (UPRR) right-of-way (ROW Option), in addition to an East Option and a West Option adjacent to the UPRR tracks. The Draft EIS will also describe other build alternatives that are under consideration, including a rail alternative along Halsted Street, and a bus rapid transit (BRT) alternative along Michigan Avenue, in addition to the No Build Alternative.

In developing the Draft EIS over the last year, CTA has reached out to a number of participating agencies regarding input on the impact assessment methodologies and the draft technical

analyses in each agency's area of expertise. As the project moves forward and the Draft EIS is further developed, as a participating agency, you may be asked to review and comment on sections of the document. Re: CTA Red Line Extension (RLE) Project Environmental Review Process Update

Dear Mr. Homer Bear, Jr.:

The Federal Transit Administration (FTA) as lead agency, in cooperation with the Chicago Transit Authority (CTA) as a joint lead agency, has been working to prepare an Environmental Impact Statement (EIS) for the proposed Red Line Extension (RLE) project. The proposed project would extend the Red Line from the existing 95th Street Terminal to the vicinity of 130th Street, subject to the availability of funding.

CTA will be hosting an open house on May 13, 2014 from 5:30 p.m. to 7:30 p.m. at Palmer Park, 201 E. 111th Street, Chicago, IL 60628 to update the community on results of the environmental analysis to date and project progress. Your agency is cordially invited to attend this open house meeting. CTA continues to receive feedback on the project and potential impacts, which will be addressed in the Draft EIS. The meeting format will be an open exchange of information between the attendees and the CTA staff. There will be no formal presentation or testimony.

CTA previously held agency and public scoping meetings in September 2009, and hosted a public open house in August 2011. Since this time, CTA has been preparing the Draft EIS based on analysis of the impacts identified for each of the project alternatives. The Draft EIS is expected to be published for public review in spring 2015. The Draft EIS will document potential benefits and impacts of the Locally Preferred Alternative. This first alternative includes three possibilities: an option running along the existing freight rail tracks of the Union Pacific Railroad (UPRR) right-of-way (ROW Option), in addition to an East Option and a West Option adjacent to the UPRR tracks. The Draft EIS will also describe other build alternatives that are under consideration, including a rail alternative along Halsted Street, and a bus rapid transit (BRT) alternative along Michigan Avenue, in addition to the No Build Alternative.

In developing the Draft EIS over the last year, CTA has reached out to a number of participating agencies regarding input on the impact assessment methodologies and the draft technical

analyses in each agency's area of expertise. As the project moves forward and the Draft EIS is further developed, as a participating agency, you may be asked to review and comment on sections of the document. This will be your opportunity to communicate any concerns of your agency on the adequacy of the document, the alternatives considered, the anticipated impacts and proposed mitigation.

Your agency has previously agreed to be a participating agency for this project. At this time, we would like to reconfirm your involvement as a participating agency and your contact information. If you are not the right contact within your organization, or would like to designate another person for future coordination efforts, please email Sonali Tandon, CTA Project Manager, at STandon@transitchicago.com with the contact's name, title, and email address. FTA and CTA will use this contact information to provide future updates about the project.

Additional information about the project is available at: transitchicago.com/RedEIS.

Chicago, IL 60611

Re: CTA Red Line Extension (RLE) Project Environmental Review Process Update

Dear Mr. Rejman:

The Federal Transit Administration (FTA) as lead agency, in cooperation with the Chicago Transit Authority (CTA) as a joint lead agency, has been working to prepare an Environmental Impact Statement (EIS) for the proposed Red Line Extension (RLE) project. The proposed project would extend the Red Line from the existing 95th Street Terminal to the vicinity of 130th Street, subject to the availability of funding.

CTA will be hosting an open house on May 13, 2014 from 5:30 p.m. to 7:30 p.m. at Palmer Park, 201 E. 111th Street, Chicago, IL 60628 to update the community on results of the environmental analysis to date and project progress. Your agency is cordially invited to attend this open house meeting. CTA continues to receive feedback on the project and potential impacts, which will be addressed in the Draft EIS. The meeting format will be an open exchange of information between the attendees and the CTA staff. There will be no formal presentation or testimony.

CTA previously held agency and public scoping meetings in September 2009, and hosted a public open house in August 2011. Since this time, CTA has been preparing the Draft EIS based on analysis of the impacts identified for each of the project alternatives. The Draft EIS is expected to be published for public review in spring 2015. The Draft EIS will document potential benefits and impacts of the Locally Preferred Alternative. This first alternative includes three possibilities: an option running along the existing freight rail tracks of the Union Pacific Railroad (UPRR) right-of-way (ROW Option), in addition to an East Option and a West Option adjacent to the UPRR tracks. The Draft EIS will also describe other build alternatives that are under consideration, including a rail alternative along Halsted Street, and a bus rapid transit (BRT) alternative along Michigan Avenue, in addition to the No Build Alternative.

In developing the Draft EIS over the last year, CTA has reached out to a number of participating agencies regarding input on the impact assessment methodologies and the draft technical analyses in each agency's area of expertise. As the project moves forward and the Draft EIS is further developed, as a participating agency, you may be asked to review and comment on sections of the document. This will be your opportunity to communicate any concerns of your

agency on the adequacy of the document, the alternatives considered, the anticipated impacts and proposed mitigation.

Your agency has previously agreed to be a participating agency for this project. At this time, we would like to reconfirm your involvement as a participating agency and your contact information. If you are not the right contact within your organization or would like to designate another person for future coordination efforts, please email me at standon@transitchicago.com with the contact's name, title, and email address. FTA and CTA will use this contact information to provide future updates about the project.

Additional information about the project is available at: transitchicago.com/RedEIS.

If you have any questions, please do not hesitate to contact me. Thank you for your participation on this project.

The proposed project would extend the Red Line from the existing 95th Street Terminal to the vicinity of 130th Street, subject to the availability of funding.

CTA will be hosting an open house on May 13, 2014 from 5:30 p.m. to 7:30 p.m. at Palmer Park, 201 E. 111th Street, Chicago, IL 60628 to update the community on results of the environmental analysis to date and project progress. Your agency is cordially invited to attend this open house meeting. CTA continues to receive feedback on the project and potential impacts, which will be addressed in the Draft EIS. The meeting format will be an open exchange of information between the attendees and the CTA staff. There will be no formal presentation or testimony.

CTA previously held agency and public scoping meetings in September 2009, and hosted a public open house in August 2011. Since this time, CTA has been preparing the Draft EIS based on analysis of the impacts identified for each of the project alternatives. The Draft EIS is expected to be published for public review in spring 2015. The Draft EIS will document potential benefits and impacts of the Locally Preferred Alternative. This first alternative includes three possibilities: an option running along the existing freight rail tracks of the Union Pacific Railroad (UPRR) right-of-way (ROW Option), in addition to an East Option and a West Option adjacent to the UPRR tracks. The Draft EIS will also describe other build alternatives that are under consideration, including a rail alternative along Halsted Street, and a bus rapid transit (BRT) alternative along Michigan Avenue, in addition to the No Build Alternative.

In developing the Draft EIS over the last year, CTA has reached out to a number of participating agencies regarding input on the impact assessment methodologies and the draft technical analyses in each agency's area of expertise. As the project moves forward and the Draft EIS is further developed, as a participating agency, you may be asked to review and comment on

sections of the document. This will be your opportunity to communicate any concerns of your agency on the adequacy of the document, the alternatives considered, the anticipated impacts and proposed mitigation.

Your agency has previously agreed to be a participating agency for this project. At this time, we would like to reconfirm your involvement as a participating agency and your contact information. If you are not the right contact within your organization or would like to designate another person for future coordination efforts, please email me at standon@transitchicago.com with the contact's name, title, and email address. FTA and CTA will use this contact information to provide future updates about the project.

Additional information about the project is available at: transitchicago.com/RedEIS.

If you have any questions, please do not hesitate to contact me. Thank you for your participation on this project.

Sincerely,

A handwritten signature in black ink, appearing to read "Sonali", with a horizontal line underneath.

Re: CTA Red Line Extension (RLE) Project Environmental Review Process Update

Dear Ms. Snorden:

The Federal Transit Administration (FTA) as lead agency, in cooperation with the Chicago Transit Authority (CTA) as a joint lead agency, has been working to prepare an Environmental Impact Statement (EIS) for the proposed Red Line Extension (RLE) project. The proposed project would extend the Red Line from the existing 95th Street Terminal to the vicinity of 130th Street, subject to the availability of funding.

CTA will be hosting an open house on May 13, 2014 from 5:30 p.m. to 7:30 p.m. at Palmer Park, 201 E. 111th Street, Chicago, IL 60628 to update the community on results of the environmental analysis to date and project progress. Your agency is cordially invited to attend this open house meeting. CTA continues to receive feedback on the project and potential impacts, which will be addressed in the Draft EIS. The meeting format will be an open exchange of information between the attendees and the CTA staff. There will be no formal presentation or testimony.

CTA previously held agency and public scoping meetings in September 2009, and hosted a public open house in August 2011. Since this time, CTA has been preparing the Draft EIS based on analysis of the impacts identified for each of the project alternatives. The Draft EIS is expected to be published for public review in spring 2015. The Draft EIS will document potential benefits and impacts of the Locally Preferred Alternative. This first alternative includes three possibilities: an option running along the existing freight rail tracks of the Union Pacific Railroad (UPRR) right-of-way (ROW Option), in addition to an East Option and a West Option adjacent to the UPRR tracks. The Draft EIS will also describe other build alternatives that are under consideration, including a rail alternative along Halsted Street, and a bus rapid transit (BRT) alternative along Michigan Avenue, in addition to the No Build Alternative.

In developing the Draft EIS over the last year, CTA has reached out to a number of participating agencies regarding input on the impact assessment methodologies and the draft technical analyses in each agency's area of expertise. As the project moves forward and the Draft EIS is further developed, as a participating agency, you may be asked to review and comment on

sections of the document. This will be your opportunity to communicate any concerns of your agency on the adequacy of the document, the alternatives considered, the anticipated impacts and proposed mitigation.

The proposed project would extend the Red Line from the existing 95th Street Terminal to the vicinity of 130th Street, subject to the availability of funding.

CTA will be hosting an open house on May 13, 2014 from 5:30 p.m. to 7:30 p.m. at Palmer Park, 201 E. 111th Street, Chicago, IL 60628 to update the community on results of the environmental analysis to date and project progress. Your agency is cordially invited to attend this open house meeting. CTA continues to receive feedback on the project and potential impacts, which will be addressed in the Draft EIS. The meeting format will be an open exchange of information between the attendees and the CTA staff. There will be no formal presentation or testimony.

CTA previously held agency and public scoping meetings in September 2009, and hosted a public open house in August 2011. Since this time, CTA has been preparing the Draft EIS based on analysis of the impacts identified for each of the project alternatives. The Draft EIS is expected to be published for public review in spring 2015. The Draft EIS will document potential benefits and impacts of the Locally Preferred Alternative. This first alternative includes three possibilities: an option running along the existing freight rail tracks of the Union Pacific Railroad (UPRR) right-of-way (ROW Option), in addition to an East Option and a West Option adjacent to the UPRR tracks. The Draft EIS will also describe other build alternatives that are under consideration, including a rail alternative along Halsted Street, and a bus rapid transit (BRT) alternative along Michigan Avenue, in addition to the No Build Alternative.

In developing the Draft EIS over the last year, CTA has reached out to a number of participating agencies regarding input on the impact assessment methodologies and the draft technical analyses in each agency's area of expertise. As the project moves forward and the Draft EIS is further developed, as a participating agency, you may be asked to review and comment on

sections of the document. This will be your opportunity to communicate any concerns of your agency on the adequacy of the document, the alternatives considered, the anticipated impacts and proposed mitigation.

Your agency has previously agreed to be a participating agency for this project. At this time, we would like to reconfirm your involvement as a participating agency and your contact information. If you are not the right contact within your organization or would like to designate another person for future coordination efforts, please email me at standon@transitchicago.com with the contact's name, title, and email address. FTA and CTA will use this contact information to provide future updates about the project.

Additional information about the project is available at: transitchicago.com/RedEIS.

If you have any questions, please do not hesitate to contact me. Thank you for your participation on this project.

Sincerely,

Dear Mr. Arkell,

On April 17, 2014, we received a letter from the Regional Administrator, Federal Transit Administration, inviting the Transportation Security Administration (TSA) to attend an open house on May 13, 2014 to receive an update on results of the environmental analysis to date and progress in regards to the red line extension project.

TSA will not be able to participate in this open house, however, we do maintain a compelling interest in all areas related to security and security related risk reduction activities in the design, development, construction and eventual operation of the project. I will serve as your point-of-contact and appreciate the opportunity to partner with you going forward.

Sincerely yours,
Chris

Appendix D

Community Group Meeting Materials and Meeting Notes

RED AHEAD

Red Line Extension

• CTA plans to extend the Red Line 5.3 miles south from 95th Street to 130th Street

• CTA needs public input to move forward on the environmental analysis

RLE and the Red Ahead Program

Red Ahead is a comprehensive initiative for maintaining, modernizing, and expanding Chicago's most traveled rail line.

- **Red Line Extension (RLE)**
- Red North Station Interim Improvements (completed 2012)
- Red Line South (Dan Ryan) Reconstruction Project (completed 2013)
- Wilson Station Reconstruction Project (starting 2014)
- 95th Street Terminal Improvement Project (starting 2014)
- Red Purple Modernization (RPM)

INTERNAL DRAFT: Prepared by Strategic Planning and Policy

3

CTA is continuing the public processes on two critical components of the Red Ahead Program in 2014

Red Line Extension (RLE)

- Pursuing New Starts federal funds
- New Starts projects expand rail service into an area that is not within the current transit footprint, therefore entail a relatively longer environmental and planning process
- CTA must compete with other New Starts projects from across the country that are already in line for funding
- Multiple alternatives and their impacts are being evaluated

Red and Purple Modernization (RPM)

- Pursuing Core Capacity federal funds
- Core Capacity projects are intended to increase capacity of existing rail lines within the current transit footprint, therefore entail a relatively shorter environmental and planning process
- RPM is the first and only Core Capacity project in the FTA's Project Development phase and is recommended for funding in the proposed FY2015 federal budget
- Phase One includes two main projects and a single alternative is proposed for each of these projects

INTERNAL DRAFT: Prepared by Strategic Planning and Policy

4

Project Overview

- The end of the line for the CTA's Red Line South is currently the 95th/Dan Ryan Terminal.
- Later this year construction will begin on the 95th Street Terminal Improvement Project, which will expand and greatly improve the 95th/Dan Ryan Terminal.
- With the estimated \$2.3B Red Line Extension (RLE) Project, CTA is proposing to extend service from south of 95th/Dan Ryan Terminal to the vicinity of 130th Street.

INTERNAL DRAFT: Prepared by Strategic Planning and Policy

5

Project History and Public Involvement

Alternatives Analysis (2006-2009)

- Project alternatives were presented at six public meetings
- Locally Preferred Alternative adopted by the CTA Board in 2009

Environmental Scoping (2009)

- Community members and public agencies assessed the range of project actions, alternatives and potential environmental impacts

Early Technical Work & Open House (2011)

Draft Environmental Impact Statement (2012 – present)

- Under preparation by CTA and the Federal Transit Administration (FTA)
- Public feedback on the preliminary impact of the alternatives is necessary to complete the Draft EIS

INTERNAL DRAFT: Prepared by Strategic Planning and Policy

6

RLE Means a Better Served Far South Side

The Red Line Extension project will:

- Serve a low-income, transit dependent area of the City that does not have direct CTA rail service
- Faster commute - provide a 20-minute time savings to downtown by providing one-seat service, as opposed to the current bus-rail trip from 130th.
- Include four new stations, a new rail yard, and bus and parking facilities at all stations.

Community & Economic Development Benefits

- **Increased transit access to affordable housing**
- **Encourages community investment and economic development**
- **Direct construction jobs created**
Estimate: 2,600 – 4,100
- **Increased access to jobs**

Newly accessible jobs within an hour commute of the proposed 111th Street station would increase by 56% (CMAP, 2012)

Environmental Impact Statement (EIS)

To acquire future federal funding, an EIS study is required by the National Environmental Policy Act (NEPA)

The EIS allows the public to fully understand the potential environmental impacts and provide input before final decisions are made

The EIS includes:

- A description and comparison of alternatives
- An explanation of the existing environmental setting
- An analysis of potential positive and negative environmental impacts of construction and operation of each alternative
- Proposed mitigation measures to reduce or eliminate potential negative impacts

INTERNAL DRAFT: Prepared by Strategic Planning and Policy

9

Project Alternatives

Union Pacific Railroad (UPRR) Rail Alternative

- East Option
- Right-of-Way (ROW) Option
- West Option

Halsted Rail Alternative

Bus Rapid Transit (BRT) Alternative

No Build Alternative

Based on the environmental analysis and public feedback during the Draft EIS process, a single alternative will be designated in the Final EIS

INTERNAL DRAFT: Prepared by Strategic Planning and Policy

10

UPRR Rail Alternative

Chicago Transit Board Adopted Alternative

5.3-mile extension along the UPRR tracks

Three options

- East Option
- ROW Option (contingent upon the relocation of UPRR, significant cost and delay TBD)
- West Option

Four stations (103rd, 111th, Michigan, 130th)

- Park & ride facilities (up to 3,700 total parking spaces)
- Bus facilities

Elevated structure from 95th Street Terminal to 119th Street, then at-grade (ground level) tracks from 119th Street to 130th Street

120th Street Yard and Shop

INTERNAL DRAFT: Prepared by Strategic Planning and Policy

11

Anticipated Project Impacts

Feedback required from the public on:

- Parks
- Property displacements
- Visual
- Noise
- Community character
- Wetlands
- Historic properties

INTERNAL DRAFT: Prepared by Strategic Planning and Policy

12

Parks

Parklands Affected by UPRR Rail Alternative Options			
Parkland	East Option	ROW Option	West Option
Wendell Smith Park	0.4 acres	0.2 acres	0.2 acres
Fernwood Parkway	-	-	1.9 acres
Block Park	0.8 acres	-	-
Total	1.2 acres	0.2 acres	2.1 acres

Mitigation Strategies

Coordination with Chicago Park District is ongoing to identify mitigation including improvements to other parklands or replacement nearby if there are any displacements

INTERNAL DRAFT: Prepared by Strategic Planning and Policy

13

Property Displacements

Construction of the project would require the acquisition of private property

	UPRR			Halsted	BRT
	East Option	ROW Option	West Option		
Affected Parcels without Building Displacements	149	112	144	72	49
Affected Parcels with Building Displacements	110	22	51	38	3
<i>(Residential Building Displacements)</i>	<i>(95)</i>	<i>(17)</i>	<i>(30)</i>	<i>(17)</i>	<i>(1)</i>
Total Affected Parcels	259	134	195	110	52

Impacts presented are

- based on Conceptual Engineering and represent maximum impacts on all alternatives
- for the purposes of comparing alternatives and will be confirmed in the Final EIS following more detailed conceptual design of the single NEPA preferred alternative

INTERNAL DRAFT: Prepared by Strategic Planning and Policy

14

Property Displacements

All major transit construction projects have impacts:

- The Brown Line Expansion had 40 building displacements
- The RPM project (Phase 1) may displace 19 buildings

Mitigation Strategies

Property owners would be paid not less than fair market value for their land and buildings and may be eligible for compensation equal to the original purchase price of the property. They would also be assisted in relocating their businesses or dwellings, per the Federal Uniform Act on relocation assistance and property acquisition.

When a single option is chosen, CTA will work with the community and property owners (including the UPRR) to minimize property impacts.

INTERNAL DRAFT: Prepared by Strategic Planning and Policy

15

Visualizations

UPRR Rail Alternative

Note that appearance of project elements (such as parking structures, beams, columns, etc.) in visualizations is intended to show scale of project elements. Actual construction appearance may differ based on design decisions for colors, textures, finishes, and choice of specific design features.

Existing

UPRR West Option

UPRR East Option

Visualization

103rd Street Station

117th and Prairie Ave

INTERNAL DRAFT: Prepared by Strategic Planning and Policy

16

Visualizations Halsted Rail Alternative

Note that appearance of project elements (such as parking structures, beams, columns, etc.) in visualizations is intended to show scale of project elements. Actual construction appearance may differ based on design decisions for colors, textures, finishes, and choice of specific design features.

Existing

Visualization

INTERNAL DRAFT: Prepared by Strategic Planning and Policy

17

Visual Impacts

Mitigation Strategies

- Provide new landscaping or other urban design amenities
- New structures would reflect the character of neighborhoods or communities to the extent feasible
- Careful placement of exterior lighting adjacent to residential communities
- Construction best management practices including maintaining vegetation and debris-free construction areas

INTERNAL DRAFT: Prepared by Strategic Planning and Policy

18

Noise

Mitigation Strategies

- Continuous welded rail
Fewer joints mean a smoother and quieter ride
- Closed deck structure
Limits noise beneath the elevated tracks
- Noise barriers
Absorb railway noise

Open versus Closed Deck

Jointed versus Welded Rail

Noise Barriers

Moderate noise impacts would remain along the Halsted Rail Alternative after mitigation.

INTERNAL DRAFT: Prepared by Strategic Planning and Policy

19

Temporary Construction Impacts

Mitigation Strategies

- Notices of noise-generating activities would be posted
- Road closures would be announced
- Special advertising for affected businesses
- Limited idling of construction vehicles
- Alternative parking provisions

INTERNAL DRAFT: Prepared by Strategic Planning and Policy

20

Where Minimal Impacts Would Occur

- Land use
- Safety & security
- Environmental justice
- Energy
- Transportation
- Water resources
- Biological resources
- Hazardous materials
- Air quality

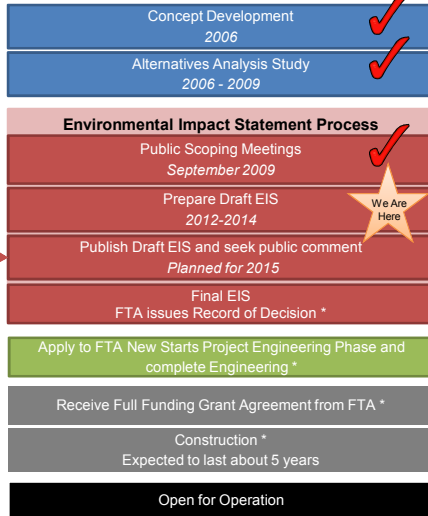

Project Funding

- CTA will pursue a wide range of local, state and federal (New Starts) sources with the help and support of the community.
- The New Starts process is very competitive and funds are limited.

Project Development Process

Next Step

RLE added to
CMAP GO TO 2040
Regional Plan

* Dependent on funding and approvals

Meeting Notes

Date: Tuesday, April 29, 2014

Meeting: CTA with Chicago Neighborhood Initiatives and Greater Roseland Chamber of Commerce

Meeting Purpose: CTA to share RLE Project updates

Present:

Andrea D. Reed, Greater Roseland Chamber of Commerce
Anthony Beckham, Office of Congresswoman Robin Kelly
Jason Swan, Chicago Neighborhood Initiatives
David Doig, Chicago Neighborhood Initiatives
Carole Morey, Chicago Transit Authority
Gerald Nichols, Chicago Transit Authority
Sonali Tandon, Chicago Transit Authority
Melissa Williams (note taker), CWC Transit Group

Time: 10:03 am to 10:52 am

Location: Chicago Neighborhood Initiatives, 1000 E. 111th St., Chicago, IL

Presentation Highlights

CTA staff delivered a presentation about the proposed Red Line Extension (RLE) Project that would extend the Red Line from the existing 95th Street Terminal to the vicinity of 130th Street. Representatives from the CTA discussed:

- **Project Overview and Benefits**
The RLE Project would mean a better served far south side, by providing direct CTA rail service and reducing commute times from the project area. The project would include four new stations, a new rail yard, and bus and parking facilities at all stations. The project would encourage economic development and benefit the community by adding construction jobs and increasing access to jobs.
- **CTA is preparing an Environmental Impact Statement (EIS)**
CTA has been evaluating the project alternatives and is preparing a Draft EIS, which will analyze the potential positive and negative environmental impacts of construction and operation of each alternative and will propose mitigation measures to minimize potential negative impacts.

- **RLE Project Alternatives and Potential Impacts**
CTA is evaluating three options for the Locally Preferred Alternative along the Union Pacific Railroad (UPRR) tracks including an option within the existing freight right-of-way (ROW Option), an East Option, and a West Option. CTA is also evaluating a rail alternative along Halsted Street, a bus rapid transit (BRT) alternative along Michigan Avenue, and the No Build Alternative. Potential project impacts include impacts to parks, property displacements, visual impacts, noise impacts, community character, wetlands, and historic properties.
- **Funding and Next Steps**
The CTA will pursue a wide range of local, state and federal (New Starts) sources with the help and support of the community. Once the CTA completes the Draft EIS, a public hearing will be held to share the findings of the Draft EIS.

Questions and Comments from Meeting Participants

- **Anthony Beckham: An article in the Chicago Sun-Times stated that CTA will receive \$2B in funding for this project. How accurate is that statement?**
Carole Morey: The cost of the project has been estimated at approximately \$2.3B. The cost depends on the actual route that will be selected. That estimate is based on the Locally Preferred Alternative which is the UPRR Rail Alternative.
- **Anthony Beckham: Will CTA seek funds from the TIGER grant?**
Carole Morey: In order for CTA to become eligible for a full funding grant agreement from Federal Transit Administration (FTA), the NEPA process and preliminary engineering have to be completed and local funding has to be committed.
- **Jason Swan: Regarding the UPRR Alternative, it appears that the only viable route is the West Option? Is it possible to acquire part of a particular alternative?**
Carole Morey: No, a specific option will have to be selected.
- **David Doig: What are the alternative options?**
Carole Morey: The four alternatives are UPRR Rail Alternative, Halsted Rail Alternative, BRT Alternative, and No Build Alternative.
- **David Doig: What main streets are near the East Option?**
Sonali Tandon: The East Option is between Wentworth and the Union Pacific railroad.
- **Anthony Beckham: With the line coming from the 130th Street area, has there been any communication with the Altgeld Gardens community?**
Gerald Nichols: Yes, a meeting was held with the community group. Another meeting is scheduled for the near future.

- Jason Swan: Will there be employment opportunities for the community during construction phase? One issue that will be posed is that most of the jobs are union. The people from the area are not part of the union.**
 Gerald Nichols: Yes. CTA will make sure that jobs are available to those in the community as it did for the Red Line South project. It is important for the community to be involved with the process because these concerns can be expressed to the unions.
- Anthony Beckham: What other community groups have been engaged in this process?**
 Gerald Nichols: Developing Communities Project has been involved. CTA will be meeting with the group tomorrow.
- Jason Swan: What church organizations if any have been engaged in this process?**
 Gerald Nichols: CTA is working on engaging the various community churches. It is CTA's understanding that Developing Communities Project has over 130 churches within its organization.
- Jason Swan: What is the project construction process? Will the City be the general contractor and have subcontractors bidding on the various scopes?**
 Gerald Nichols: No. There will be a bidding process to select the general contractor. The project bidding process will be similar to that of the Red Line South project.
- Anthony Beckham: What is the target date for construction?**
 Carole Morey: It is a challenge to put a date in place because there are other items that have to be completed before securing a funding grant agreement from FTA.

Jason Swan and Anthony Beckham: CTA should have renderings for all alternative routes displaying before and after visuals. The drawings should also show bus routes and current and potential businesses.

Jason Swan: CNI is available to help galvanize community support. It has extensive involvement with the community in building of the local Walmart in the Pullman community.

Follow Up

CTA will keep communication lines open and consider issues discussed during this meeting in the upcoming Draft EIS.

Meeting Notes

Date: Wednesday, April 30, 2014

Meeting: CTA with Developing Communities Projects (DCP)

Meeting Purpose: CTA to share RLE Project updates

Present:

Renett Arrington, I Have A Voice
Phyllis Johnson, 95th St. POD
Godfrey Lawson, Roseland Chamber of Commerce
Lillie Muhammad, Medical POD
Fred Jackson, 130th POD
Rev. Paul Brown, 103rd POD
Rev. J. Leon Thorn, 95th St. POD
Michael LaFargue, West Chesterfield Community Association (WCCA)
Mariann McGill, TCA Health Inc.
Cherneecia Muhammad, 95th St. POD
Tiffany D. Hightower, DCP
Katherine Thornton, DCP
Deborah L. Truss, DCP
Rev. Rayford Grady, DCP
Michael McLaughlin, Chicago Transit Authority
Gerald Nichols, Chicago Transit Authority
Sonali Tandon, Chicago Transit Authority
Melissa Williams (note taker), CWC Transit Group

Time: 11:23 am to 1:32 pm

Location: Developing Communities Project, 212 E. 95th Street, Chicago, IL

Presentation Highlights

CTA staff delivered a presentation about the proposed Red Line Extension (RLE) Project that would extend the Red Line from the existing 95th Street Terminal to the vicinity of 130th Street. Representatives from the CTA discussed:

- **Project Overview and Benefits**

The RLE Project would mean a better served far south side, by providing direct CTA rail service and reducing commute times from the project area. The project would include four new stations, a new rail yard, and bus and parking facilities at

all stations. The project would encourage economic development and benefit the community by adding construction jobs and increasing access to jobs.

- **CTA is preparing an Environmental Impact Statement (EIS)**
CTA has been evaluating the project alternatives and is preparing a Draft EIS, which will analyze the potential positive and negative environmental impacts of construction and operation of each alternative and will propose mitigation measures to minimize potential negative impacts.
- **RLE Project Alternatives and Potential Impacts**
CTA is evaluating three options for the Locally Preferred Alternative along the Union Pacific Railroad (UPRR) tracks including an option within the existing freight right-of-way (ROW Option), an East Option, and a West Option. CTA is also evaluating a rail alternative along Halsted Street, a bus rapid transit (BRT) alternative along Michigan Avenue, and the No Build Alternative. Potential project impacts include impacts to parks, property displacements, visual impacts, noise impacts, community character, wetlands, and historic properties.
- **Funding and Next Steps**
The CTA will pursue a wide range of local, state and federal (New Starts) sources with the help and support of the community. Once the CTA completes the EIS, a public hearing will be held to share the findings of the EIS.

Questions and Comments from Developing Communities Project (DCP)

- **Rev. J. Leon Thorn: Where will the proposed rail yard will be located?**
Michael McLaughlin: The yard and maintenance facility will be located at the south end around 120th Street to 127th Street. It is not a residential area and currently has industrial, railroad, and MWRD properties.
- **Phyllis Johnson: What is CMAP? What is the website address?**
Michael McLaughlin: CMAP is the acronym for the Chicago Metropolitan Agency for Planning (CMAP). In short, the agency integrates planning and land use for the seven counties. The website is www.cmap.illinois.gov
Sonali Tandon: RLE is the only fiscally constrained extension project in the CMAP 2040 regional plan.
- **Rev. Paul Brown: Is there a time limit on the completion and submission of the EIS? What is CTA's estimated timeframe?**
Michael McLaughlin: Once CTA enters into the Project Development stage by submitting a letter to FTA, it has two years to complete the EIS. As of now, there is no time limit because the letter has not been submitted to FTA; the Draft EIS has to be completed first. The estimated timeframe is about 3 years to complete the Draft and Final EIS.
Sonali Tandon: CTA plans to publish the Draft EIS next year. It typically takes 2 years to complete the final EIS with preliminary engineering.

- **Rev. Paul Brown: This project can not move forward until 3 to 5 years from now because the EIS has to be completed?**

Michael McLaughlin: CTA is working to complete the Draft EIS and has biweekly coordination calls with Federal Transit Administration (FTA) on the project. EIS is FTA's document and requires coordinating with them. Once the environmental work and preliminary engineering (which involves 30% design) is finished, the Final EIS can be completed.

- **Phyllis Johnson: Why does 30% of design have to be completed in order to create the document?**

Michael McLaughlin: You need to complete about 30% design to complete the Final EIS as some of the information is needed for the Final EIS.

- **Lillie Muhammad: Please clarify the purpose of this meeting.**

Michael McLaughlin: The purpose of this meeting is two-fold. First, CTA wants to inform the group of items that will be discussed at the public meeting. Secondly, information and feedback from these types of meetings help inform the EIS. CTA has met and will meet with other groups to get feedback.

- **Michael LaFargue: Is money available and budgeted for costs related to the 30% design phase and the creation of the EIS?**

Deborah L. Truss: Is this cost separate from the estimated project cost of \$2.3B?

Michael McLaughlin: The \$2.3B is inclusive of soft costs that include engineering and consultant costs. A budget is being put in place for the extensive cost relative to the preliminary engineering. CTA will seek funding for this process.

Sonali Tandon: There is prior funding available that will be used for costs associated with drafting the EIS which is planned to be published next year.

- **Deborah L. Truss: Is this project shown on CTA's budget?**

Michael McLaughlin: DCP has raised this concern previously. The budget writers are taking it into consideration. As of today, the budget does not show projects that are in the planning process. That does not mean that the budget structure cannot be changed.

Rev. Paul Brown: Please understand our concern. If these items are not shown, there is a great possibility that this project will be lost over the time period it will take to complete the EIS. The community feels that this project has been set aside while other projects in other communities are constantly being reported on in the newspapers as being completed. If this project is shown as a line item in the budget, it will not get lost. The community does not want to wait another 50 years before this project is done.

Deborah L. Truss: CTA will display good faith if the project is shown as a line item even if the amount is \$0.

Fred Jackson: The project is not as transparent as it should be. The project should be shown as a line item in the budget.

- **Deborah L. Truss: Will the Metra - South Shore or Metra Electric tracks be used for the extension?**

Michael McLaughlin: The Metra tracks will not be used but will be near the RLE tracks. CTA trains are different from those of Metra.

- **Lillie Muhammad: What parks would be affected? With the replacement of parks, has there been consideration as to where they will be relocated?**

Michael McLaughlin: Wendell Smith Park, Fernwood Parkway, and Block Park would be affected depending on the alternative and option selected. Parks could be replaced if there are vacant parcels. The West Option will affect Fernwood Parkway and the East Option would impact Wendell Smith Park and Block Park.

Sonali Tandon: A park would be replaced only if the entire park is affected. If only a small portion would be affected, other mitigation methods will be considered.

- **Rev. Paul Brown: Residents are concerned about displacements and how displacements would affect them as property owners, residents, and those who are leasing. Is there a process in place that assesses fair value and assist them with moving to an area that is conducive to their living?**

Michael McLaughlin: When the NEPA preferred alternative route has been chosen and the affected parcels have been identified, property owners, renters, and business owners will be assisted in relocating. The Federal Uniform Relocation Act will be followed. If the property value has decreased, the fair value or purchase price could be granted.

- **Godfrey Lawson: Will future potential property value such as the Obama Library or the Chicago port system in the Altgeld Gardens area be factored into assessing property values relative to eminent domain?**

Rev. Paul Brown: Will the mitigation strategies, relocation process, and means of assessing fair value be itemized in the Draft EIS?

Michael McLaughlin: The Federal Uniform Relocation Act has to be followed for assessing fair value. This information is not included in the Draft EIS. Pamphlets will be made available at the public meeting regarding the Federal Uniform Relocation Act.

Mike Lafarge: Land development and business development coordinators should look into the Uniform Act and do research because there is such a concern for those who are upside down with their mortgage. Also, a challenge has been posed to home owners who have paid their house off 10 to 20 year ago and now would have to relocate to something comparable.

- **Deborah L. Truss: Are there drawings available that show the proposed alternative routes with enough detail to display elevations and properties that would be affected?**

Michael McLaughlin: Additional information, maps and visuals will be displayed during the public meeting

- **Rev. Paul Brown: How will the public meeting be set up? Will information be gathered through a survey where tabulations can be made? Will there be mailings?**

Sonali Tandon: There will be no mailings. Information similar to what is being presented today but with more detail will be available at the public meeting. CTA staff will be available to answer specific questions and talk one-on-one.

Additional maps and visuals will be available.

Deborah L Truss: The PODS which are part of DCP should be the focus group for this project. The group should review the maps prior to being made available to the public. The PODS/DCP can help better prepare CTA for a town hall forum.

- **Lillie Muhammad: Has a strategy been put into place as to how the public will be addressed? Especially those who are affected by this transformation.**

Michael McLaughlin: Feedback is welcome as the strategy is being formulated. Once the NEPA preferred alternative route is chosen, the affected parcels will be identified. Notification will then be released to affected persons. Relocation options and rights will be explained.

- **Rev. Paul Brown: Will the community have input in choosing the alternative route? What method has been put in place to evaluate the community's opinions?**

Sonali Tandon: There will be comment cards at the open houses on which community can provide their feedback on alternatives. Results are documented and will be included in the EIS. Once the Draft EIS is published, there will be a formal hearing. A court reporter will be present at that hearing to record public comments. The route will be chosen based on public feedback and technical environmental analysis.

Michael LaFargue: A real survey is a cost but can be beneficial. A questionnaire type of survey that can be documented needs to be done and analyzed by a real statistician.

- **Rev. J. Leon Thorn: Has the Halsted Street Route been eliminated?**

Michael McLaughlin: The statement was misconstrued. The Halsted route has not been eliminated. The board chose the UPRR Rail Alternative as a Locally Preferred Alternative based on public opinion from 2006.

- **Rev. J. Leon Thorn: What is the durability of the system? The community does not want a system that has to be replaced every 20 years.**

Michael McLaughlin: There are maintenance measures that are put into place so that the structure would not have to be replaced in a short period of time.

- **Deborah L Truss: Is there a benchmark system similar to Chicago's that is used to determine the longevity of this type of structure?**

Michael McLaughlin: Philadelphia, Boston, and New York are similar in the category of wear and tear in usage.

- **Tiffany D. Hightower: Is there a budget for maintenance and upgrades?**
 Michael McLaughlin: FTA requires a budget for projected maintenance and upgrades in the financial analysis. FTA must be confident in CTA maintaining the structure. FTA considers this type of project as an investment and do not want to waste federal dollars.
- **Rev. J. Leon Thorn: What is the estimated number of people that will be serviced?**
 Michael McLaughlin: That information is being gathered and will be provided at the public meeting.
- **Deborah L Truss: Will the Project Development Process and Next Steps slides be placed on CTA's website?**
 Sonali Tandon: This information will be placed on the website after the public meeting.
- **Fred Jackson: When will the plan be put in place?**
 Michael McLaughlin: It all depends on the local funding. This group's assistance is needed in securing the local match. Once funding is in place, the sooner the project will begin.
- **Rev. Paul Brown: The local PODS are being tapped into by the county commissioner, aldermen, congressmen, and state senators regarding local community projects. The more CTA communicates with these groups, the more information can be relayed to officials.**
 Michael McLaughlin: On April 17th, public officials were briefed about the project. There are more meetings scheduled in the future. CTA will continue communication regarding the project and its efforts.
- **Phyllis Johnson: What is the process in determining historic properties and community characteristics?**
 Michael McLaughlin: Properties that are eligible to be listed on the National Register of Historic Places are deemed historic properties. Community characteristics are addressed by the composition of homes and businesses in the area.
- **Phyllis Johnson: What consideration is taken from the Department of Planning regarding building and developing areas around the alternate routes?**
 Michael McLaughlin: It is a challenge considering options for building and developing areas when the NEPA preferred alternative route has not been chosen.
- **Rev. J. Leon Thorn: Have Park and Ride facilities been addressed?**
 Michael McLaughlin: All four proposed stations will have park and ride facilities with up to 3,700 total parking spaces. The public will decide if they want them.

- **Rev. Paul Brown: The community feels as if there is no sense of urgency with the RLE but other lines are coming up in other communities.**

Michael McLaughlin: Previous projects that have been completed did not require an EIS.

Sonali Tandon: This is the first EIS that CTA is preparing.

- **Deborah L Truss: Has FTA given CTA a timeline to finish the EIS? How will businesses be assessed through eminent domain? Especially, strip malls.**

Michael McLaughlin: CTA will work with the businesses in helping them find a suitable relocation. CTA will also work with the City of Chicago Planning Department for relocation of any strip malls.

- **Tiffany D. Hightower: DCP will support CTA in its efforts if it provides clarity, transparency, and integrity throughout the process. DCP is requesting:**

1. Hardcopy of the report that has all of the public comments
2. FAQ from CTA regarding this project
3. Updated timeline which may include “contingent upon funding”
4. A comparison document of completed projects in Chicago which lists things that are needed to get the project completed
5. A comparison of other mega projects in the USA noting timelines and requirements

Deborah L Truss: CTA should use the HUD HOME Investment Partnerships Program FAQ as a guideline for creating its own FAQ.

Michael McLaughlin: DCP should submit a listing of all of its meetings to CTA.

Follow Up

CTA will keep communication lines open and consider issues discussed during this meeting in the upcoming Draft EIS.

Date: Tuesday, May 6, 2014

Meeting: CTA with Golden Gate Homeowners Association, People for Community Recovery, and Altgeld Local Advisory Council

Meeting Purpose: CTA to share RLE Project updates

Present:

Gwenda Hoskins, People for Community Recovery
Georgia Curtis, People for Community Recovery
Marguerite Jacobs, People for Community Recovery
Naomi Allen, Altgeld Local Advisory Council
Sharon Davis, Altgeld Local Advisory Council
Doris Martin, Golden Gate Homeowners Association
Cheryl Johnson, People for Community Recovery
Deloris Lucas, Golden Gate Homeowners Association
Regina Scott
Christian Strachan, People for Community Recovery
Kevin O'Malley, Chicago Transit Authority
Gerald Nichols, Chicago Transit Authority
Sonali Tandon, Chicago Transit Authority
Melissa Williams (note taker), CWC Transit Group

Time: 12:41 pm to 1:50 pm

Location: Chicago Youth Center, 951 East 132nd Place, Chicago, IL

Presentation Highlights

CTA staff delivered a presentation about the proposed Red Line Extension (RLE) Project that would extend the Red Line from the existing 95th Street Terminal to the vicinity of 130th Street. Representatives from the CTA discussed:

- **Project Overview and Benefits**

The RLE Project would mean a better served far south side, by providing direct CTA rail service and reducing commute times from the project area. The project would include four new stations, a new rail yard, and bus and parking facilities at all stations. The project would encourage economic development and benefit the community by adding construction jobs and increasing access to jobs.

- **CTA is preparing an Environmental Impact Statement (EIS)**
CTA has been evaluating the project alternatives and is preparing a Draft EIS, which will analyze the potential positive and negative environmental impacts of construction and operation of each alternative and will propose mitigation measures to minimize potential negative impacts.
- **RLE Project Alternatives and Potential Impacts**
CTA is evaluating three options for the Locally Preferred Alternative along the Union Pacific Railroad (UPRR) tracks including an option within the existing freight right-of-way (ROW Option), an East Option, and a West Option. CTA is also evaluating a rail alternative along Halsted Street, a Bus Rapid Transit (BRT) Alternative along Michigan Avenue, and the No Build Alternative. Potential project impacts include impacts to parks, property displacements, visual impacts, noise impacts, community character, wetlands, and historic properties.
- **Funding and Next Steps**
The CTA will pursue a wide range of local, state and federal (New Starts) sources with the help and support of the community. Once the CTA completes the Draft EIS, a public hearing will be held to share the findings of the Draft EIS.

Questions and Comments from Meeting Participants

- **Deloris Lucas: What are the names of the streets associated with the 130th Street Station options?**
Sonali Tandon: South Station Option - Ellis Avenue; West Station Option - MWRD property.
Doris Martin: It would be best if the station could be placed in a location where bus routes wouldn't be disturbed, preferably on the side of Altgeld Gardens.
- **Marguerite Jacobs: Have any of the alternatives changed since previous discussions?**
Sonali Tandon: No, the alternative routes are the same.
- **Marguerite Jacobs: What is the low cost alternative?**
Sonali Tandon: The Bus Rapid Transit Alternative is the low cost alternative.
- **Georgia Curtis: What parks would be affected if the West Option is selected?**
Sonali Tandon: Fernwood Parkway and Wendell Smith Park would be affected. Only the jogging area of Wendell Smith Park would be affected.
- **Deloris Curtis: Where are the affected parks located?**
Sonali Tandon: Block Park is located near the Roseland pumping station; Fernwood Parkway is located between 103rd and 99th Street, next to Eggleston Avenue; Wendell Smith Park is located just south of I-57.
- **Marguerite Jacobs: Will parking be available?**
Sonali Tandon: Yes, parking would be available at the four designated stations.

- **Gwenda Hoskins: How many homes will be affected along the East Option? A visual should be provided.**
 Sonali Tandon: Approximately 95 residential buildings would be displaced by the East Option.
- **Marguerite Jacobs: Are the homes that will be affected vacant? Will newly built structures be affected? Will CTA pay homeowners for their property?**
 Sonali Tandon: Approximately 95 residential buildings would be displaced by the East Options, which includes vacant homes. The number of vacant homes is not available. CTA is required to follow the Federal Relocation Act - homeowners will be compensated for their property.
 Doris Martin: Most of the buildings along this route are abandoned. There do not appear to be any newly built structures along this path.
- **Cheryl Johnson: Will the project be completed before 2016?**
 Sonali Tandon: The Final EIS and Preliminary Engineering have to be completed and funding has to be secured in order for construction to begin.
- **Cheryl Johnson: Could this project have both public and private funding?**
 Sonali Tandon: That is an option at this time.
- **Christian Strachan: How many people would ride between 130th and 95th Street?**
 Sonali Tandon: There will be approximately 13 million rides annually, both ways, on the new segment.
- **Marguerite Jacobs: Will bus and train fares increase?**
 Gerald Nichols: CTA does not use fares to fund capital projects; this is a capital project.
- **Christian Strachan: How is CTA coordinating with bus routes to avoid long waiting periods?**
 Kevin O'Malley: Logistics will be planned once the route is selected. CTA is too early in the process to work out those details.
- **Cheryl Johnson: What is CTA's preferred route?**
 Sonali Tandon: Based on the community feedback, the CTA Board adopted the UPRR Alternative as the Locally Preferred Alternative.
- **Cheryl Johnson: What can constituents do to voice their opinions? With which political officials have CTA spoken?**
 Gerald Nichols: CTA has briefed Aldermen from the 6th, 8th, 9th, 21st and 34th wards. CTA has also spoken to congressmen. We need the people to come to the public meeting to express their concerns. Comment cards will be available.

Follow Up

CTA will keep communication lines open and consider issues discussed during this meeting in the upcoming Draft EIS.

Presentation Highlights

CTA staff delivered a presentation about the proposed Red Line Extension (RLE) Project that would extend the Red Line from the existing 95th Street Terminal to the vicinity of 130th Street. Representatives from the CTA discussed:

- **Project Overview and Benefits**

The RLE Project would mean a better served far south side, by providing direct CTA rail service and reducing commute times from the project area. The project would include four new stations, a new rail yard, and bus and parking facilities at all stations. The project would encourage economic development and benefit the community by adding construction jobs and increasing access to jobs.

- **CTA is preparing an Environmental Impact Statement (EIS)**
CTA has been evaluating the project alternatives and is preparing a Draft EIS, which will analyze the potential positive and negative environmental impacts of construction and operation of each alternative and will propose mitigation measures to minimize potential negative impacts.
- **RLE Project Alternatives and Potential Impacts**
CTA is evaluating three options for the Locally Preferred Alternative along the Union Pacific Railroad (UPRR) tracks including an option within the existing freight right-of-way (ROW Option), an East Option, and a West Option. CTA is also evaluating a rail alternative along Halsted Street, a bus rapid transit (BRT) alternative along Michigan Avenue, and the No Build Alternative. Potential project impacts include impacts to parks, property displacements, visual impacts, noise impacts, community character, wetlands, and historic properties.
- **Funding and Next Steps**
The CTA will pursue a wide range of local, state and federal (New Starts) sources with the help and support of the community. Once the CTA completes the Draft EIS, a public hearing will be held to share the findings of the Draft EIS.

Questions and Comments from Meeting Participants

- **Arnold Pugh: Would the structure along Halsted Street be elevated?**
Sonali Tandon: Yes. The tracks would be positioned on elevated structures. Columns would be placed to avoid interfering with traffic lanes.
- **Godfrey Lawson: What types of businesses are located near the proposed Halsted Street structure that would be affected?**
Arnold Pugh: This route is a positive for business because they would have exposure to more visitors.
- **Vernetta Rucker: Where would parking be located for the surrounding businesses?**
Sonali Tandon: Street parking would remain available between the columns.
- **Arnold Pugh: Moving forward it would be beneficial to have the addresses of the affected parks.**
Sonali Tandon: Yes, that will be included in the Draft EIS.
- **Godfrey Lawson: There are plans for economic development on the south side of Chicago. Relative to eminent domain, would future value be considered when acquiring property to build the RLE?**
Sonali Tandon: CTA is required to follow the Federal Relocation Act when compensating property owners.
Janet Poole: Property owners might not be at an advantage with fair market value. Owners might be able to yield more from selling the property on their own.

Arnold Pugh: Property owners are concerned that they would not receive the same value in property and community once they have been relocated.

- **Nancy Wimberly: Does the CTA have a list of all addresses of homes and businesses that would be affected? Regarding CTA's Relocation Consultant, Melody Carvajal: What is her job description? What is her salary? What are her credentials? Why isn't her voicemail box set-up?**

Sonali Tandon: The CTA does not have a relocation consultant for this project because it is still early in the process.

Nancy Wimberly: CTA should engage someone now to help the community with relocating. Owners need to prepare themselves for losing their homes.

Sonali Tandon: There are four alternatives that have been presented and one must be selected. Once the preferred alternative has been selected, CTA would contact the property owners to discuss next steps. CTA is trying to be judicious in its communication with the community.

- **Gloria Cosey: When would the route be selected?**

Sonali Tandon: The Draft EIS is expected to be published in 2015. CTA will then prepare the Final EIS on a single route. The Final EIS is expected to take two years from start to completion.

Nancy Wimberly: CTA should engage someone now to help the community with relocating. Owners need to prepare themselves for losing their homes.

- **Nancy Wimberly: CTA should release names of all contractors with contract amounts and the demographics of the workforce.**

Gerald Nichols: This information isn't available for the RLE because construction has not started.

Godfrey Lawson: This organization will be contacting the black contractors now so that they can be in alignment when the time comes.

- **Janet Poole: Will contractors that have only held \$500,000 contracts be afforded opportunities to bid on a \$1M+ contract?**

Gerald Nichols: Yes, CTA engages small contractors in working on its projects.

- **Angela Ware: How far in advance will the RFP be released?**

Gerald Nichols: Contractors will have ample amount of time to bid. Contractors can go online now and see a listing of all jobs that are available now. It is called JOC.

Follow Up

CTA will keep communication lines open and consider issues discussed during this meeting in the upcoming Draft EIS.

Meeting: CTA with Chicago Park District and Friends of the Parks

Meeting Purpose: CTA to share RLE Project Updates and Parks Impacts

Present:

Erika Sellke, Chicago Park District
Cassandra Francis, Friends of the Parks
Sylvia Jones, Friends of the Parks
Sonali Tandon, Chicago Transit Authority
Virginia Jackson, CWC Transit Group
Jenifer Palmer, CWC Transit Group

Time: 1:00 pm to 2:00 pm

Location: CTA Headquarters, 567 West Lake Street, 10th Floor, Chicago, IL

Presentation Highlights

CTA staff delivered a presentation about the proposed Red Line Extension (RLE) Project that would extend the Red Line from the existing 95th Street Terminal to the vicinity of 130th Street. Representatives from the CTA discussed:

- **Project Overview and Benefits**
The RLE Project would mean a better served far south side, by providing direct CTA rail service and reducing commute times from the project area. The project would include four new stations, a new rail yard, and bus and parking facilities at all stations. The project would encourage economic development and benefit the community by adding construction jobs and increasing access to jobs.
- **CTA is preparing an Environmental Impact Statement (EIS)**
CTA has been evaluating the project alternatives and is preparing a Draft EIS, which will analyze the potential positive and negative environmental impacts of construction and operation of each alternative and will propose mitigation measures to minimize potential negative impacts.
- **CTA is preparing an Environmental Impact Statement (EIS)**
CTA has been evaluating the project alternatives and has begun to prepare a Draft EIS which will analyze the potential positive and negative environmental

impacts of construction and operation of each alternative and will propose mitigation measures to reduce or eliminated potential negative impacts. Once the CTA completes the Draft EIS, a public hearing will be held to share the findings of the Draft EIS.

- **Parks Impacts**

CTA has been analyzing the potential impacts of the project from a number of different perspectives, including potential for displacements, noise and vibration, effects on historic properties and others, and will mainly discuss findings with respect to parks in the meeting. Based on the analysis, the No Build, BRT, and Halsted Rail Alternative have no associated potential park impacts. All UPRR Rail Alternative options would impact Wendell Smith Park due to the overlap with the park and elevated structure/vertical clearances. There would be temporary occupancy of a small portion of the park during construction, but the area underneath the elevated structure would remain open after construction. Depending upon the UPRR Alternative option selected, the acreage impacted varies.

In addition to potential temporary impacts to Wendell Smith Park from all UPRR Alternative options, the UPRR Alternative East Option would impact Block Park. The affected area includes an isolated portion of the park's open space and a communications tower, which is in an area of the park that does not currently serve a recreational use. The key recreational features of the park, walking trails and benches, are on the other side of Harvard Avenue in the eastern half of the park. While there would be some temporary construction impacts, no permanent incorporation is needed as the area underneath the elevated track structure would remain open after construction.

In addition to potential temporary impacts to Wendell Smith Park from all UPRR Alternative options, the UPRR Alternative West Option would impact Fernwood Parkway. The West Option alignment would run through two of the four parcels that make up Fernwood Parkway between 101st and 103rd Streets and would affect about 1.9 acres of the park. Temporary closure of the section of the park overlapped by the elevated structure would be necessary during construction. Public use of the park could resume after construction, as long as the area underneath the elevated structure is reopened. However, much of the park between 101st and 103rd Streets would be permanently overlapped and shaded by the structure. Concrete aerial supports would be placed permanently in the park space. The West Option would result in a permanent incorporation of the park space and if this option is selected, CTA would work with the Chicago Park District on appropriate mitigation. Some options have already been discussed with the City, including creating replacement park space nearby and/or adding enhanced recreational features to improve Fernwood Parkway's functionality as a park. The end result would potentially be a net benefit for park users.

Questions and Comments from Meeting Participants

- Discussion followed regarding appropriated funds for project development and Sylvia Jones noted that it was her understanding that \$1.5 Billion was to be appropriated in 2009 for the Red Line Extension. CTA stated that funding for the EIS planning study had been received and was used to fund this portion of the project. Once the Final EIS is submitted and a Record of Decision is determined by the Federal Transit Administration (FTA), the project would become eligible under the federally competitive New Starts grant funding. Local and state funding would be needed to secure federal funding.
- Sylvia Jones asked about the future parking fee for the proposed park and ride facility. This has not yet been determined by CTA and would be dependent upon the alternative and option selected to move forward. As the project advances, CTA will further evaluate the size and scale needed for the park and ride facilities.
- CTA asked about any areas of community concern with regard to the potential for park impacts of proposed alternatives. Discussion followed regarding specific parks in the surrounding community. Sylvia Jones asked about impacts to Princeton Park and Trinity Church. Based on review of study area mapping, these facilities are located near 95th Street, east of Eggleston. CTA noted that these areas are outside of the proposed alternatives alignments and study area. Similarly, CTA was asked whether the study reviewed potential impacts to Kensington Park. CTA noted that this had been reviewed but was outside of the area of potential effect.
- Sylvia Jones noted that Carver Park in Altgeld Gardens is a good example park in the area.
- Cassandra Francis asked that Major Taylor Bike Trail be added to the park impacts mapping, as appropriate. Major Taylor Bike Trail is not impacted by the project, but should be shown for reference purposes.
- Discussion followed regarding potential impacts from all UPRR Alternative options on Wendell Smith Park. It is understood that this is not a permanent incorporation and that only a small portion of parkland is affected. However, Ms. Francis noted that leaving the area of overlap between the park and elevated structure afterwards does change the nature of the park use.
- Cassandra Francis had concerns about impacts to parks from the UPRR Alternative options and noted that replacement of parks should be considered as part of the mitigation efforts for Block Park as well as Fernwood Parkway. CTA explained that the portion of Block Park that would be impacted is not used for recreational activity currently and does not contain any amenities. If the UPRR West Option is selected and Fernwood Parkway is impacted, CTA would work with the Chicago Park Department on appropriate mitigation, including creating replacement park area nearby and other amenities.

- Ms. Francis noted that she would like to work with Erika Sellke at the Chicago Park Department to conduct a field visit of the potentially impacted parks and determine ways to enhance compact, integrated park areas within the project study area.

Follow Up

CTA Government and Community Relations staff will provide Ms. Jones with a copy of the Section 106 (Historic) Effects Report.

Friends of the Parks and Chicago Park Department staff will further coordinate a field visit to discuss the potential impacts on parks and appropriate mitigation. CTA offered to coordinate and be part of these field visits if desired.

Friends of the Parks will look for other properties in the area that could be used for parkland mitigation.

Meeting Notes

Date: Tuesday, May 13, 2014

Meeting: CTA with Roseland Manor

Meeting Purpose: CTA to share RLE Project updates

Present:

Idamae McKinney, Roseland Manor
Blythe Wood
Frank Thomas, Roseland Manor
Diane Elem
Roberta Walker
Paula Evans, Roseland Manor, All Saints
Frankie A. Parker
Dorothy White
L. Williams
Roberta Harmon
Gerald Nichols, Chicago Transit Authority
Sonali Tandon, Chicago Transit Authority
Tammi Davis (note taker), CWC Transit Group

Time: 10:35 am to 11:15 am

Location: Roseland Manor, 11717 S. State Street, Chicago

Presentation Highlights

CTA staff delivered a presentation about the proposed Red Line Extension (RLE) Project that would extend the Red Line from the existing 95th Street Terminal to the vicinity of 130th Street. Representatives from the CTA discussed:

- **Project Overview and Benefits**
The RLE Project would mean a better served far south side, by providing direct CTA rail service and reducing commute times from the project area. The project would include four new stations, a new rail yard, and bus and parking facilities at all stations. The project would encourage economic development and benefit the community by adding construction jobs and increasing access to jobs.
- **CTA is preparing an Environmental Impact Statement (EIS)**
CTA has been evaluating the project alternatives and is preparing a Draft EIS, which will analyze the potential positive and negative environmental

impacts of construction and operation of each alternative and will propose mitigation measures to minimize potential negative impacts.

- **RLE Project Alternatives and Potential Impacts**

CTA is evaluating three options for the Locally Preferred Alternative along the Union Pacific Railroad (UPRR) tracks including an option within the existing freight right-of-way (ROW Option), an East Option, and a West Option. CTA is also evaluating a rail alternative along Halsted Street, a bus rapid transit (BRT) alternative along Michigan Avenue, and the No Build Alternative. Potential project impacts include impacts to parks, property displacements, visual impacts, noise impacts, community character, wetlands, and historic properties.

- **Funding and Next Steps**

The CTA will pursue a wide range of local, state and federal (New Starts) sources with the help and support of the community. Once the CTA completes the Draft EIS, a public hearing will be held to share the findings of the Draft EIS.

Questions and Comments from Meeting Participants

- **How will the best option be determined?**

Sonali Tandon: CTA is hosting a public Open House in Pullman Park tonight. Based upon the Environmental Analysis and public feedback, CTA will be designating a single alternative in the next step. Your feedback is very important at this point.

- **Are all the alternative options possible at this point?**

Sonali Tandon: Yes. They are all possible alternatives. The community has shown preference for the option along the Union Pacific Railroad tracks in the past. We are studying all of them currently.

- **Are they going to take a poll? How are they going to determine which option is best?**

Sonali Tandon: We are doing outreach and getting comments from the public. We'll review those comments from the public. We'll also look at the environmental analysis and impacts of the project. Then, we'll decide on the best alternative based on our analysis and the feedback that we get during this outreach.

- **What is the first stop after 95th Street?**

Sonali Tandon: 103rd Street is the first stop after 95th Street.

- **There are high schools and houses that have been here for 50 years. What's going to happen?**

Sonali Tandon: The Union Pacific Railroad tracks are there. We are looking at several options where we can either go to the east or west of the

Union Pacific tracks. We are required to be 50 feet away from the UP tracks for safety considerations which would require some displacements.

- **Mr. Williams: You have been doing this for five years. People are saying that the government does not have the money. How is the community going to get this focused?**

Sonali Tandon: CTA is currently in the planning phase. We will be pursuing federal and local money for this project. This is a huge project. We estimate the cost to be \$2.3 billion. A project of this scale requires intensive planning and time.

- **Mr. Williams: For the money that was just spent on the Red Line, was that used for rehabilitation?**

Sonali Tandon: That was a very crucial project for CTA because we needed to fix what we already had first before extending. If we build an extension but don't fix the really slow Red Line, then the extension won't work that well.

- **Mr. Williams: How will you get the funding?**

Sonali Tandon: CTA will be working with the New Starts Program of the federal government that funds such projects. It is very competitive. Different projects from the nation apply for the funding. CTA will be submitting its application for that funding. It only funds up to 50 percent of the project costs. The rest has to come from local and state sources. We will be working with local aldermen and state officials to acquire that funding so that we can apply for federal funding to get the rest of the match.

- **Why won't they extend the line? It would create more jobs.**

Sonali Tandon: We need to acquire the right-of-way which is why we have all these impacts. We are required to do this study and to identify those impacts. Projects of this scale take time. I understand your concern that it's been on the table for a while.

- **Ms. Harmon: What about the historical value and background of the buildings?**

Sonali Tandon: As part of the environmental document, we are required to look at historic buildings and if there are any effects on the historic buildings. We are working with the Federal Transit Authority, State Historic Preservation Officer, and local community organizations that specifically work on historic buildings to identify the risk effects. We look at the proposed alignment to see if there are any historic buildings that have already been identified or if there are buildings that could be historic. There is specific guidance on that from the federal government on what could be historic. We then look at the projects effects on those resources. There will be more information at tonight's Open House on historic buildings specifically and historians will be there if you have additional questions.

- **Where is tonight's meeting?**
Sonali Tandon: The meeting is at Pullman Park. Most of the information provided will be similar to what we presented today. There will be some additional information given and an opportunity to talk one-on-one with CTA staff. If you have more specific questions, we'll have comment cards there for you to provide your feedback.
- **Mr. Thomas: Do you have the land already checked out that you are trying to use?**
No, we don't have the land currently because we can't go on the railroad right-of-way. We need to acquire properties for the right-of-way.
- **Mr. Thomas: You need permission to do it, right?**
Sonali Tandon: We need to complete this environmental document first. Then we'll have permission to acquire that land. South of 119th street, there are some old railroad tracks that we may be able to use.
- **Mr. Thomas: You can tie into those railroad tracks?**
Sonali Tandon: Exactly.

Follow Up

CTA will keep communication lines open and consider issues discussed during this meeting in the upcoming Draft EIS.

Meeting: CTA with Far South Community Development Corp.

Meeting Purpose: CTA to share RLE Project updates

Present:

Abraham Lacy, Far South Community Development Corp.
Leroy Chalmers, Far South Community Development Corp.
Eric Thompson, Pullman Bank & Trust
Tina Sanders, Phalanx Family Services
Nikiesha Emery, Far South Community Development Corp.
Gerald Nichols, Chicago Transit Authority
Sonali Tandon, Chicago Transit Authority
Tammi Davis (note taker), CWC Transit Group

Time: 10:08 am to 11:00 am

Location: Kroc Center, 1250 West 119th Street, Chicago

Presentation Highlights

CTA staff delivered a presentation about the proposed Red Line Extension (RLE) Project that would extend the Red Line from the existing 95th Street Terminal to the vicinity of 130th Street. Representatives from the CTA discussed:

- **Project Overview and Benefits**

The RLE Project would mean a better served far south side, by providing direct CTA rail service and reducing commute times from the project area. The project would include four new stations, a new rail yard, and bus and parking facilities at all stations. The project would encourage economic development and benefit the community by adding construction jobs and increasing access to jobs.

- **CTA is preparing an Environmental Impact Statement (EIS)**

CTA has been evaluating the project alternatives and is preparing a Draft EIS, which will analyze the potential positive and negative environmental impacts of construction and operation of each alternative and will propose mitigation measures to minimize potential negative impacts.

- **RLE Project Alternatives and Potential Impacts**
CTA is evaluating three options for the Locally Preferred Alternative along the Union Pacific Railroad (UPRR) tracks including an option within the existing freight right-of-way (ROW Option), an East Option, and a West Option. CTA is also evaluating a rail alternative along Halsted Street, a bus rapid transit (BRT) alternative along Michigan Avenue, and the No Build Alternative. Potential project impacts include impacts to parks, property displacements, visual impacts, noise impacts, community character, wetlands, and historic properties.
- **Funding and Next Steps**
The CTA will pursue a wide range of local, state and federal (New Starts) sources with the help and support of the community. Once the CTA completes the EIS, a public hearing will be held to share the findings of the EIS.

Questions and Comments from Meeting Participants

- **Leroy Jones: How lengthy is the environmental process?**
Sonali Tandon: We started the environmental analysis in 2012 and are preparing a Draft EIS. We hope to publish it next year. After the Draft EIS is published, we'll have a public hearing to get public feedback and comments. We currently have several alternatives that we are analyzing in the Draft EIS. The Final EIS will present a single alternative with additional engineering, which could take two years for a project of this scale.
- **Abraham Lacy: Relative to the Union Pacific Railroad Alternatives, are all of these alternatives going to be elevated? What conversations have happened relative to proximity to freight trains?**
Sonali Tandon: The elevated structure, rather than at-grade, is proposed in the median of Halsted Street due to safety implications. For the Union Pacific Railroad, we are looking at an elevated structure from 99th to 119th Street. It would be at-grade (ground) level after that. There are also existing unused tracks that we can potentially use. We have had conversations with UPRR. They would like a 50-foot separation from the tracks because of safety reasons.
- **Abraham Lacy: Would you have to build a new track?**
Sonali Tandon: We would have to acquire right-of-way and would not be able to use the existing UPRR right-of-way. Acquiring right-of-way means taking some property either east or west of the UPRR tracks. The yellow line shown on the presentation is based on the CDOT study that looked at moving UPRR out of this corridor into a separate area. The ROW Option does not look very feasible at this point because of the significant costs and time delays.

- Abraham Lacy: Regarding Halsted, you mentioned that it wouldn't be at grade level because of safety concerns.**
 Sonali Tandon: Yes, because of the third (electrified) rail being at street level.
- Abraham Lacy: I've seen it by the Orange Line, on the other side like on the West side, where you have it at grade level, which is a different type of safety precaution.**
 Sonali Tandon: We always get community concerns on the Yellow Line as there is a safety hazard there. We are not looking at building at grade even though it would be cheaper. There are other technologies like light rail. But the concern with that is that if you have a different type of service then it would not be connected to the Red Line. So people would still need to transfer, which defeats the purpose of the project.
- Leroy Jones: Where is the proposed yard?**
 Sonali Tandon: With the UPRR Alternative, the yard would be north of 130th Street at the MWRD property. With the Halsted Alternative, we are proposing for the yard to be just south of 119th Street. There is a shopping mall there that would be impacted.
- Abraham Lacy: At 119th Street, you have intermodal opportunities because it connects to the Metra. It's close to shopping and is a busy corridor.**
 Sonali Tandon: We are here to get your feedback and comments. Most of the comments we've gotten are for the UPRR. There has not been a strong preference from the community for Halsted.
- Leroy Jones: Most people think that the option is going to be elevated on Halsted. I think that that's what turned a lot of people off because they don't want any type of structure in their neighborhood. I think that if something was presented at grade level to them, then they may say "ok." It might even attract businesses to the area.**
 Sonali Tandon: This would be a modern structure. We have some visuals but they are not the final designs. They are just there to help us see what it could look like.
- Leroy Jones: What were some of the things that people brought up as to why they preferred the UPRR Alternative as opposed to Halsted?**
 Sonali Tandon: Some people felt that it would be more connected to the community and could connect to Altgeld Gardens, which is the public housing development in that area.
- Abraham Lacy: Are the impacts only for the Union Pacific Railroad Alternative?**
 Sonali Tandon: No, there are impacts for all alternatives. We are coordinating with the State Historic Preservation Officer and community organizations that concentrate on historic buildings. There are historic

properties along Halsted that would be impacted and historic buildings along UPRR that might be impacted. That has been a big concern that has come out of this EIS process. Currently, we have identified four historic properties which would be impacted but they would not be displaced. I encourage you to go to our website for more information.

- **Abraham Lacy: During conversations with the community, what were some of the comments regarding noise, especially around 103rd Street?**
Sonali Tandon: That could definitely be a concern and was brought up at the Open House yesterday. We haven't analyzed those comments yet. We have heard concerns about the noise in the past. With the mitigation strategies, our analysis shows that there would not be noise impacts along the UPRR Alternative because of the existing train line. Someone from Green Street did express a concern about the noise at the Open House. Green Street has been identified as a Historic District.
- **Leroy Jones: I understand that there was a recommendation for the CTA and the RTA to coordinate their efforts. Is that something that you're looking at or is the CTA going after the funds by themselves?**
Sonali Tandon: We are coordinated at every level with RTA. For this project, we will apply for federal funds. To apply for federal funds, we will be in a very good position if we are able to identify local funds. The federal government will not even look at our application if we do not have a local funds match. That local match will essentially come from state resources.
- **Leroy Jones: Are bonds being considered for the additional funding?**
Sonali Tandon: CTA and RTA already have bonds to meet state of good repair needs. We'll be looking at all potential sources. The cost is \$2.3 billion and we need at least half of that. One additional point, we have done ridership analysis and modeling for this. The modeling shows that it will be mostly existing bus riders that will benefit from and use the new rail line.
- **Abraham Lacy: What will be the outreach regarding construction jobs for local contractors participating in this project? And is there a certain type of certification that they are supposed to have?**
Gerald Nichols: We'll do the same thing that we did on the Red Line Reconstruction project. The Chicago Urban League was the filtering house for getting young folks in that neighborhood employed on that project. We'll try to filter all of the young folks or individuals from the community to actually work on the project. We'll provide training beforehand as well. A lot of that is going on at the Urban League right now.
- **Abraham Lacy: Are some of the dollars earmarked to go to business in the community and not some large construction firm in the suburbs?**
Gerald Nichols: Whoever the contractor is, we'll work with the community to ensure that. We set up meet and greets for local businesses with either the prime or subcontractors.

- Abraham Lacy: But is there a percentage that will be set aside for construction**
 Gerald Nichols: Yes, we don't call it a set aside but we do have goals just like on Red Line South. Like on the station work, the contractor said he would bid 40%. On the track work, it was 28%. They exceeded that number.
- Abraham Lacy: Was that a local contractor?**
 Gerald Nichols: That was with DBEs. Yes.
- Abraham Lacy: Were the DBEs from local communities or statewide?**
 Gerald Nichols: That was with African-American firms.
- Abraham Lacy: Not just African-American firms but this impacts the East Side as well. Just want to make sure that minority interests are involved.**
 Gerald Nichols: Yes.
- Abraham Lacy: Are you coordinating your efforts with other prospective projects as well? For instance, a developer is trying to open a store at 115th and Michigan. Are you coordinating with developers in that area?**
 Sonali Tandon: We are working with the City. You mentioned 115th & Michigan; an Aldi's was trying to come there.
- Abraham Lacy: Yes. Aldi's is there. They moved across the street. So another developer is trying to put a store there.**
 Sonali Tandon: We coordinate with the City of Chicago and whatever plans they have will be shared with us for that project.
- Abraham Lacy: You work with DCP right? UIC?**
 Gerald Nichols: Yes. They had a separate project with UIC years back. They did something with the Chicago Metropolitan Agency for Planning. Last year, CMAP prepared this video which we showed in our open house yesterday. They are one of the many community organizations with whom we work.
- Abraham Lacy: I think that 111th and 103rd are going to be heavily impacted. I think the DCP is counting on those stations being at 111th and 103rd. What did the coordination look like on your end as far as keeping up to date with them?**
 Gerald Nichols: We're at the table. They consider themselves a partner with us.
- Abraham Lacy: I read the article that Ald. Beale put out about Halsted that was in the Sun-Times where it said that it was not going to happen having an elevated track on Halsted, which is understandable. I think it would obscure the business corridor. But I think that if there was a visual showing more of a grade level to show people the potential impact, and then it**

would help financially and with attracting new business to the corridor. I think that should be shown as an alternative as opposed to it just being an elevated track in the middle of a community.

- **Leroy Jones: Why would we not consider light rail assuming that at some point the CTA will eventually have to move to light rail?**
Sonali Tandon: Light rail is not compatible with the rail system that we have now.
- **Abraham Lacy: What impact will there be on the Metra stations?**
Sonali Tandon: Metra is a participating agency on this project, which means that we coordinate with them in every step of the process. Metra's market is a different market. People who take CTA are still taking the bus to the CTA and not taking Metra from existing different Metra stations. They want frequent service and access to CTA. It's a different market that Metra is trying to serve than what CTA serves. There is a lot of coordination with Metra and Pace. We had Metra and Pace representatives at our meeting yesterday.
- **Abraham Lacy: Regarding the safety aspect and security, we noticed that at a couple of CTA and Metra stations that they are poorly lit. Has it been discussed as to the level of security and coordination with local police departments to enforce a safer environment, especially with people getting off late from work?**
Sonali Tandon: In this planning process, we look at safety and security and how that can be improved. It will be a section in the Draft EIS, which will be published next year, as well as in the Final EIS. When we get to the Final EIS, we'll solidify the mitigations, which include additional lighting and cameras. Those are the kind of elements that we are analyzing and proposing for the project in this planning phase. As it moves along to the engineering and future phases, those recommendations will get solidified. So, again, all the feedback that we get from the community is very helpful and insightful because the more you speak, the more it will count.
- **Abraham Lacy: When it comes to the nearby stops, there are abandoned buildings near the right-of-way. The last thing residents want to see coming off a stop is an abandoned house. Are you looking at the surrounding radius? What does that radius look like?**
Sonali Tandon: We anticipate with the urban design and landscaping features that it will be an attractive stop. It will encourage more community activity and more interest for people to move in rather than move out. We have seen increased development and growth along the Brown Line.
- **Abraham Lacy: How many permanent jobs would be created?**
Sonali Tandon: We haven't looked at the operations jobs, but there will be some once the project is complete.
Gerald Nichols: On the Dan Ryan/Red Line, about 775 CTA jobs were created. That doesn't include the construction jobs.

- Leroy Jones: How long will the actual construction project take?**
 Sonali Tandon: We are planning to publish the draft document in 2015. The final document can take up to two years after that. Everything is dependent upon federal funding and approval. If everything goes great, it may take about five years to build it. Before that, we will have the engineering phase, acquiring the right-of-way, which will take about two to three years prior to the five years.
- Leroy Jones: So, we're looking at about eight years?**
 Sonali Tandon: Yes.
 Gerald Nichols: That's about average for a brand new railroad being built whether the project is here, Baltimore, or New York. That's about average.
- Eric Thompson: Does CTA have some type of barometer on how the state feels about the project?**
 Gerald Nichols: The state funded the entire Red Line South Project. The entire \$425 million was State money.
- Eric Thompson: How long did it take to get the money from the state?**
 Gerald Nichols: I don't know.
- Tina Sanders: What percentage is the state bringing to the table for this project?**
 Sonali Tandon: The maximum that that federal government would provide is 50%, but typically they provide 30%. The other 70% - 50% would be needed from local resources.
- Eric Thompson: Has there been any indication as to what the state or the city is willing to give as far as financial commitments?**
 Gerald Nichols: This project has to be done, so we'll find the money. It's the only line that doesn't extend to the city limits.
- Abraham Lacy: Is this coordinated with Olive Harvey and the Mayor's Transportation & Logistics Center, which is opening in the fall of this year?**
 Sonali Tandon: We were not aware of it. Do you have any contact information on it?
- Leroy Jones: I have it.**
- Abraham Lacy: The Mayor is definitely pushing that.**
 Sonali Tandon: Ok. Thanks.

Follow Up

CTA will keep communication lines open and consider issues discussed during this meeting in the upcoming Draft EIS.

Meeting Notes

Date: Thursday, May 15, 2014

Meeting: CTA with Agape Community Center

Meeting Purpose: CTA to share RLE Project updates

Present:

Benjamin Sutton, Resident
Brad Harry, Agape Community Center
Tonya Easter, Agape Community Center
Marc Henkel, Agape Community Center
Linda Cotton, Agape Community Center
Laverne Horne, BNCO & Roseland Neighborhood Community Organization
Marcus Kellum, Resident
Gerald Nichols, Chicago Transit Authority
Sonali Tandon, Chicago Transit Authority
Tammi Davis (note taker), CWC Transit Group

Time: 10:45 am to 11:37 am

Location: Agape Community Center, 342 West 111th Street, Chicago

Presentation Highlights

CTA staff delivered a presentation about the proposed Red Line Extension (RLE) Project that would extend the Red Line from the existing 95th Street Terminal to the vicinity of 130th Street. Representatives from the CTA discussed:

- **Project Overview and Benefits**
The RLE Project would mean a better served far south side, by providing direct CTA rail service and reducing commute times from the project area. The project would include four new stations, a new rail yard, and bus and parking facilities at all stations. The project would encourage economic development and benefit the community by adding construction jobs and increasing access to jobs.
- **CTA is preparing an Environmental Impact Statement (EIS)**
CTA has been evaluating the project alternatives and is preparing a Draft EIS, which will analyze the potential positive and negative environmental impacts of construction and operation of each alternative and will propose mitigation measures to minimize potential negative impacts.

- **RLE Project Alternatives and Potential Impacts**
CTA is evaluating three options for the Locally Preferred Alternative along the Union Pacific Railroad (UPRR) tracks including an option within the existing freight right-of-way (ROW Option), an East Option, and a West Option. CTA is also evaluating a rail alternative along Halsted Street, a bus rapid transit (BRT) alternative along Michigan Avenue, and the No Build Alternative. Potential project impacts include impacts to parks, property displacements, visual impacts, noise impacts, community character, wetlands, and historic properties.
- **Funding and Next Steps**
The CTA will pursue a wide range of local, state and federal (New Starts) sources with the help and support of the community. Once the CTA completes the Draft EIS, a public hearing will be held to share the findings of the Draft EIS.

Questions and Comments from Meeting Participants

- **Marc Henkel: There was an open house meeting on Tuesday. Is this similar to that meeting or is this completely different? How does this compare to the Tuesday meeting?**
Sonali Tandon: This is a preview of what we presented at that meeting. We don't have all the boards that we shared at the meeting; all the boards are available online. Today we'll provide the big picture of what was shared. We asked people in the community to provide feedback. Today, we are also here to get your feedback. You can also provide your feedback later by mail or email.
- **Linda Cotton: Why wouldn't CTA use the UPRR tracks?**
Sonali Tandon: The CTA doesn't have right-of-way for those tracks. Those tracks are Union Pacific Railroad tracks. It's their right-of-way. They want us to be 50 feet away from their tracks.
- **Marc Henkel: Is there a projected end date?**
Sonali Tandon: We have almost completed the analysis internally. We are here to present our findings. After this, we will be coordinating with the Federal Transit Administration because this is their project and document. We will publish the Draft EIS sometime next year.
- **Laverne Horne: And that allows you to pursue funding?**
Sonali Tandon: Yes. This whole EIS process allows us to pursue funding. But that will be just a Draft EIS. The Final EIS will be prepared on one single alternative. In this Draft EIS, we are evaluating three different alternatives. In the Final EIS there will be just one alternative. Then, we'll do additional engineering to ensure that whatever impacts we are presenting are accurate. We will also have more negotiations on mitigations with different partners.

- Laverne Horne: Regarding access to affordable housing, how will the housing be affected?**
 Sonali Tandon: This project will provide increased transit access to affordable housing and general housing stock. By bringing transit to the area, people will be able to utilize transit more.
- Marc Henkel: Will the RLE be elevated? From where to where?**
 Sonali Tandon: Yes, it will be elevated from 99th Street to 119th Street.
- Marc Henkel: Do you mean overhead?**
 Sonali Tandon: Yes, overhead. The structure will be like what's on the Orange Line. Some of our structures downtown are older, like 100 years old; this will be a more modern structure.
- Marc Henkel: Do any of these options include a subway underground?**
 Sonali Tandon: No, subway is very expensive. One example is the 2nd Avenue Subway in New York. CTA is not looking at subway options.
- Marc Henkel: I see the end of the orange line on the slide. Is the orange one of the alternatives?**
 Sonali Tandon: All of these options will continue on the same segment. It differs just where we are relative to the Union Pacific Railroad.
- Brad Harry: You say it's elevated, but it's not necessarily elevated over the existing railroad track?**
 Sonali Tandon: No, it won't be elevated over the existing railroad track. It can't be for safety reasons. We have to be 50 feet away from the existing UPRR tracks.
- Marc Henkel: Are you going to zoom in on these three options?**
 Sonali Tandon: Yes. I have another slide about the UPRR Alternative. The Halsted Alternative would be elevated and in the median of Halsted Street. We have a few visuals here and more are on our website.
- Marc Henkel: Will this extension only have four stations?**
 Sonali Tandon: Right.
- Marc Henkel: Will all the Bus Rapid Transit stops be along Michigan Avenue?**
 Sonali Tandon: Yes. Then, the BRT route will run along Michigan Avenue and then it will continue into Altgeld Gardens just like our #34 Bus Route but with BRT elements in it.
- Marc Henkel: Will there be any traffic impacts? If there's a stop at 111th Street, will traffic be stopped every time?**
 Sonali Tandon: The tracks will be elevated so traffic will not be stopped. People will be trying to access the CTA and also crossing the railroad with

freight trains passing. There could be safety concerns; to mitigate the safety concerns we could put quad-gates, which are basically two gates on each side, and a pedestrian gate to discourage crossing.

- **Brad Harry: Not Fernwood Park but Fernwood Parkway? I don't know where that is.**

Sonali Tandon: Fernwood Park is separate. There is just green land with some trees at Fernwood Parkway. It's just next to the UPRR right-of-way.

- **Brad Harry: On this slide, you're showing the East Option, Right-of-Way Option, and West Option. But, the ROW Option is not really an option because of the safety concerns. So it's going to be either East or West?**

Sonali Tandon: The ROW Option assumes that Union Pacific would no longer be in their current right-of-way and that they would move somewhere else. There was a study conducted that looked at moving them.

- **Brad Harry: They said no?**

Sonali Tandon: It would have unlimited delays and cost implications.

- **Marc Henkel: Have you thought about putting something above them?**

Sonali Tandon: No, because we would still need to be 50 feet away.

- **Linda Cotton: Would this building be a displacement?**

Sonali Tandon: What we are evaluating at this stage are not defined engineering plans; we are looking at what could be impacted. As the process proceeds, displacements will be minimized.

- **Linda Cotton: But you have identified 110 properties that could be displaced.**

Sonali Tandon: Yes.

- **Brad Harry: Trains blow horns because there aren't quad gates that come down. Ald. Carrie Austin says that we can't get money for quad gates because it's a federal thing. But we could have quad gates with this option?**

Sonali Tandon: Yes. That is one of the mitigation measures that we are looking at because we don't want people crossing freight to get to a CTA train. It would be a safety concern.

- **Brad Harry: Some of these impacts are negative and some are positive?**

Sonali Tandon: Yes. But the negatives are not adverse. There will be some impact but not to the level that it would be a concern to the community.

- **Laverne Horne: What's the difference between the type of noise that the Metra train that runs through Beverly makes and the type of noise that this track will make?**

Sonali Tandon: Our findings show that moderate impact will be defined as something people will be concerned about. Our analysis did show that the impacts would be moderate along the Union Pacific after we adopt all those mitigation measures. But in terms of the decibel noise of the Metra trains versus the decibel noise of the CTA trains, I will have to get back to you.

- **Marc Henkel: It seems to me that the CTA has less noise than the Union Pacific but more noise than the Metra. When you're on the North side or downtown and hear the "L", you can definitely know it's there.**

Sonali Tandon: These structures would be new structures and quieter than some of the structures downtown. As the trains come to the station, the speed really reduces, so there won't be much noise from the trains but will be from the station itself such as, "doors closing" type of announcements. We also have noise maps on the exhibit boards online that designate moderate and severe noise levels. They show at what distance the noise will be moderate and at what distance it will be severe.

- **Marc Henkel: Have you done anything with the safety and security?**

Sonali Tandon: We are looking at additional lighting and cameras around the stations. That has come up as a concern, so obviously it will be a part of the mitigation. We will work with the City of Chicago and the OEMC to identify who will be maintaining and monitoring those cameras as well as their exact distance. Is that a concern that you have for the station here?

- **Marc Henkel: I don't take the Red Line often. Sometimes when I go by the 95th Street Station, I see additional police officers and there are occasional incidences there. I was wondering if that's going to increase incidences here or at the other stops.**

Sonali Tandon: Our analysis didn't show that bringing the stations would increase crime, but it is definitely a concern from the community. We will be addressing it in the project design so that the design is more open and includes more lighting and cameras.

- **Marc Henkel: Will there be additional security at the different stations?**

Sonali Tandon: It is too early to say. We are still in the planning phase. As some of the things get decided and built, we'll see how the community reacts. There will obviously be security.

- **Brad Harry: You need local funding first before you get federal funding?**

Sonali Tandon: Yes. It is a very competitive process. Different states have different projects that they are funding. The federal government would want to know what local match we have. But there are other criteria including the ridership, cost of the project, how many transit-dependent

people will use it, etc. There are several different criteria that the federal government reviews, but local funding is one of the major items.

- **Brad Harry: Let's say it takes five or ten years to get the funding. How long do you have to wait before you have to do another EIS?**

Sonali Tandon: An EIS has a short shelf life. We would have to look at the EIS again. At some point, if the wait gets really long, then we'd have to redo the whole EIS. But if it's not that long, then we'd just have to redo some of the work but not all of it.

- **Marc Henkel: What's the soonest that everything will fall into place and things will start getting built - estimated?**

Sonali Tandon: It all depends on funding and approvals. We currently have funding to finish the Draft EIS. We also need funding to do the Final EIS and the engineering. If we had all the funding and approvals, then the Final EIS could take two to three years. The engineering step could take another two to three years. Then construction would take about five years. So, to clarify, the ten years that I mentioned earlier was when the construction would start and not when it would end.

- **Marc Henkel: So it could take six years before you get funding to start construction?**

Sonali Tandon: Right, to start construction.

- **Brad Harry: Construction is expected to last about five years?**

Sonali Tandon: Yes.

- **Brad Harry: Our initial concern is if you choose that East Option, our business would be one of the businesses that would be displaced. To my knowledge, we have not been contacted by CTA. I spoke with residents on the west side of the tracks that stated that they had been contacted by CTA about exploring whether or not they would be willing to sell their property.**

Sonali Tandon: We have not contacted anyone regarding that. So if someone had been contacted, then that's not from CTA. We just sent postcards to inform people about this meeting. We have not contacted anyone. We have these alternatives. We have not finalized on any of them and have not identified specific properties. The numbers that I have presented are just based on the maximum envelope.

- **Brad Harry: So even after the Final EIS, there's no guarantee that you'll get funding in time to go forward with this.**

Sonali Tandon: Acquisition will not start until we have the funding and approval from FTA. The EIS gives us approval to start that acquisition, but it doesn't mean that we will start. We'll only start when we have the funding.

- **Brad Harry: Acquisition happens when you receive full funding?**
Sonali Tandon: Yes.
- **Marc Henkel: Who's the person or entity that will determine which alternatives will be chosen?**
Sonali Tandon: It would be CTA and FTA, based on the comments we have been getting through the public comment process, and based on our analysis. There are park impacts, historic property impacts, displacements on east versus west, and also further discussions with FTA.
- **Marc Henkel: Would aldermen be involved?**
Sonali Tandon: We have been briefing aldermen and getting their feedback as well.
- **Brad Harry: We know that CTA has the Alderman's voice in their ear.**
Gerald Nichols: Some years ago, we came out this way to discuss the West Option. We've spoken with Ald. Carrie Austin. She wants to go back out to the community to see if they still want that option.
- **Marc Henkel: So with the Halsted Alternative available, they still chose the West Option?**
Gerald Nichols: Yes. We're still going to discuss all of the options to see if their minds have changed. They might want the Halsted Alternative.
- **Marc Henkel: Was there a 25 feet restriction then or was the 50 feet restriction presented at that time?**
Sonali Tandon: Previously when we presented, it was not at this level of detail. It was a single Union Pacific Railroad option. We didn't discuss East Option versus West Option. This time around, we are discussing it in greater detail with displacements and impacts.
- **Marc Henkel: You mentioned your website a couple of times. What is the exact website where we can access this?**
Sonali Tandon: transitchicago.com/redeis
- **Linda Cotton: You talked about the West Option. But even then, it sounds like if there is going to be a parking area, that it could be on the east side and that's the whole issue/area surrounding safety. So, could that be an impact and would it be an impact no matter what?**
Sonali Tandon: It could be. But we are trying to identify vacant parcels for parking locations because it's more flexible. Second, we are also looking at if it's on that side and the parking is also on that side, then people would not have to cross as much. But some people who live on the East side will have to cross if they parked there. There will be more in-depth studies on the traffic movement. We've already coordinated with CDOT, IDOT, and Cook County on the traffic studies and impacts. There will be more studies conducted.

- **Brad Harry:** If the East Option is chosen and this building is demolished for the project or if the West Option is chosen and this building is demolished for the project, it would be a great loss to this neighborhood. We've been here 35 years servicing the neighborhood and the city. I think the neighborhood would feel the loss of the Agape Community Center.
- **Marc Henkel:** Could there be something in the plan where the building can be relocated?
Sonali Tandon: In the EIS, we are also looking at community facilities that could be impacted. We would look at the potential locations for them to be relocated. We would be paying the owners the fair market value and help with relocation and costs of relocation. There are a lot of vacant parcels within the community so it should be possible to relocate them within the community.
- **Brad Harry:** Great.
Sonali Tandon: Any other comments or questions?
Gerald Nichols: You can also go online and put comments in there. We'll still take them.
- **Marc Henkel:** Is that last slide on the website?
Sonali Tandon: We have this on the website.
- **Marc Henkel:** Is the whole slideshow on the website?
Sonali Tandon: It's not exactly this slideshow. This slide is on the website. But it has additional information than what was presented today. It's called Boards. So look for Boards from the open house.

Follow Up

CTA will keep communication lines open and consider issues discussed during this meeting in the upcoming Draft EIS.

Meeting Notes

Date: Thursday, June 19, 2014

Meeting: CTA with Alderman Carrie M. Austin and 34th Ward Residents

Meeting Purpose: CTA to share RLE Project updates

Present:

Alderman Carrie M. Austin
Reverend Leonardo Gilbert
34th Ward Residents
Gerald Nichols, Chicago Transit Authority
Carole Morey, Chicago Transit Authority
Melissa Williams (note taker), CWC Transit Group

Time: 6:07 pm to 7:13 pm

Location: Sheldon Heights Church of Christ, 11325 S. Halsted Street, Chicago

Presentation Highlights

CTA staff delivered a presentation about the proposed Red Line Extension (RLE) Project that would extend the Red Line from the existing 95th Street Terminal to the vicinity of 130th Street. Representatives from the CTA discussed:

- **Project Overview and Benefits**
The RLE Project would mean a better served far south side, by providing direct CTA rail service and reducing commute times from the project area. The project would include four new stations, a new rail yard, and bus and parking facilities at all stations. The project would encourage economic development and benefit the community by adding construction jobs and increasing access to jobs.
- **CTA is preparing an Environmental Impact Statement (EIS)**
CTA has been evaluating the project alternatives and is preparing a Draft EIS, which will analyze the potential positive and negative environmental impacts of construction and operation of each alternative and will propose mitigation measures to minimize potential negative impacts.
- **RLE Project Alternatives and Potential Impacts**
CTA is evaluating three options for the Locally Preferred Alternative along the Union Pacific Railroad (UPRR) tracks including an option within the existing freight right-of-way (ROW Option), an East Option, and a West

Option. CTA is also evaluating a rail alternative along Halsted Street, a bus rapid transit (BRT) alternative along Michigan Avenue, and the No Build Alternative. Potential project impacts include impacts to parks, property displacements, visual impacts, noise impacts, community character, wetlands, and historic properties.

- **Funding and Next Steps**

The CTA will pursue a wide range of local, state and federal (New Starts) sources with the help and support of the community. Once the CTA completes the Draft EIS, a public hearing will be held to share the findings of the Draft EIS.

Questions and Comments from Meeting Participants

- **34th Ward Resident: What part of Halsted Street would be affected?**
Carole Morey: Halsted Street would be impacted from the I-57 alignment around 99th Street on Halsted Street down to Vermont Avenue.
- **34th Ward Resident: How many parcels would be affected along Halsted Street?**
Carole Morey: The Halsted Alternative would impact 38 total parcels. A total of 17 are homes and the remaining 21 would be commercial and industrial properties.
- **34th Ward Resident: How many streets with homes from east and west of Halsted Street would be affected?**
Carole Morey: The structure would be elevated; therefore only parcels that are along Halsted Street would be affected. This land would be used for parking.
- **34th Ward Resident: Would the remaining properties on Halsted Street be facing the train tracks as they do along Lake Street?**
Carole Morey: Yes.
- **34th Ward Resident: Can a portion of the Union Pacific Right-of-Way be taken?**
Carole Morey: The Union Pacific Railroad evaluated potentially relocating but based on a study they will not be relocating. Therefore, we were left with the East and West Options.
- **34th Ward Resident: Does the Union Pacific Railroad Alternative require taking more homes?**
Carole Morey: Yes, this alternative has the most displaced homes.
- **34th Ward Resident: What about the Michigan Avenue Bus Rapid Transit Alternative? Would you have to widen Michigan Avenue and take more properties?**
Carole Morey: No we would not need to widen Michigan Avenue.

- 34th Ward Resident: Is the number of affected parcels based on occupied or vacant properties?**
 Carole Morey: The count includes both occupied and vacant properties. When we go back out to survey the land we would determine how many people would be displaced since that is important.
- 34th Ward Resident: Regarding noise mitigation, would considerations be taken similar to O'Hare?**
 Carol Morey: CTA is required to meet FTA's minimal noise level. CTA would try to minimize noise by using a specific type of structure. If that does not meet the requirement, then CTA may assist residents with getting the proper home insulation.
- 34th Ward Resident: Can the community impose a quiet zone; would CTA assist the community in getting it?**
 Carol Morey: I don't know the answer to that question.
- 34th Ward Resident: Would structure be at street level? Would traffic be affected?**
 Carol Morey: The structure would be elevated. Traffic would not be affected because the train would run above the street.
- 34th Ward Resident: Would there be parking available at the stations?**
 Carole Morey: Yes there would be park and rides available at the stations totaling around 3,100 parking spot.
- 34th Ward Resident: How many homes would be affected along 111th Street because of the park and ride? The main concern is safety. There could be an increase in break-ins.**
 Carole Morey: Please place all your concerns on the comment cards. We will take it into consideration.
- 34th Ward Resident: To avoid homes and businesses being affected, why the train can't go down I-57?**
 Carole Morey: The route has to go through the community in order to have a positive economic impact.
- 34th Ward Resident: Look at how long the train has been going through Englewood with no economic impacts.**
 Carole Morey: We are noting the concern.
- 34th Ward Resident: What types of business would come into the area because of the RLE Project?**
 Alderman Austin: Small businesses are encouraged to come to the area. I would rather see a multitude of smaller businesses rather than a big box business. This would be great for us to create business.

- 34th Ward Resident: Would the Halsted Alternative and the East/West Options be the only options?**
 Carole Morey: So far they are our primary options. If you feel like there is an alternative we are not considering, I encourage you to fill out a comment card.
- 34th Ward Resident: Has CTA considered placing the line down the Bishop Ford?**
 Carole Morey: In order to have an economic impact, it has to be brought through the community.
- 34th Ward Resident: Time Frame - When would an alternative be chosen?**
 Carole Morey: Hopefully in 2015. Further engineering would have to take place.
- 34th Ward Resident: How would the alternative be chosen?**
 Carole Morey: After the FTA approves the document to be published, CTA has 30 days in which people can comment through a public hearing.
- 34th Ward Resident: Would there be permanent jobs with CTA? How many jobs overall?**
 Carole Morey: There would be 2,600 to 4,600 construction jobs and there would be permanent jobs with CTA.
 Gerald Nichols: CTA is currently hiring. Please visit www.transitchicago.com
- 34th Ward Resident: Would federal and private funding be able to cover the project?**
 Carole Morey: Federal and private funding won't cover the entire cost of the project. State funding is also needed.
- 34th Ward Resident: How would the private consumers be affected? Would bus fares increase?**
 Carole Morey: CTA does not use fares to fund capital projects; this is a capital project.

Follow Up

CTA will keep communication lines open and consider issues discussed during this meeting in the upcoming Draft EIS.

Red Line Extension

Red Line Extension: Expanding Transit Access on Chicago's Far South Side

The Chicago Transit Authority (CTA) is proposing to add major new transit service on Chicago's South Side by extending its busiest rail line, the Red Line, south from the 95th Street Terminal to the vicinity of 130th Street. The proposed 5.3-mile extension would include four new stations near 103rd Street, 111th Street, Michigan Avenue/116th Street, and 130th Street – each new station would include bus and parking facilities. CTA is evaluating the environmental impacts of three options for the Locally Preferred Alternative along the Union Pacific Railroad (UPRR) tracks including an option within the existing freight right-of-way (ROW Option), an East Option, and a West Option. A rail alternative along Halsted Street and a bus rapid transit (BRT) alternative along Michigan Avenue are also under evaluation.

Red Line Extension Alternatives

Why is the Red Line Extension Project important?

- **Expanded access and service improvements** – The Red Line Extension would improve service and transit accessibility for Far South Side neighborhoods where transit-dependent residents currently lack direct access to rail service.
- **Reduced commute times** – Between 2005 and 2010, commute times were, on average, 20 percent longer for those that currently live in the area that would be served by the Red Line Extension, than for other commuters in the Chicago region. The Red Line Extension would save the average commuter in the communities affected by this project 87 hours per year.
- **Catalyst for economic growth** – CTA estimates between 2,600 and 4,100 jobs would be created during Red Line Extension construction. In addition, new stations may serve as catalysts for neighborhood revitalization and help reverse decades of disinvestment in local business districts.
- **Enhanced livability** – The improvements would also provide linkages to affordable housing, jobs, services, and educational opportunities – enhancing livability and neighborhood vitality.

Red Line Extension: Project Update

CTA is progressing on what is a multi-step federal process to secure project approval and funding. CTA has been conducting the technical environmental analysis of the project alternatives, and is preparing a Draft Environmental Impact Statement (EIS), expected to be published in early 2015. The Draft EIS will describe each alternative, explain the existing environmental setting and community context for the proposed route, and review potential positive/negative effects of construction and operation.

Following approval of the EIS, CTA can apply to the Federal Transit Administration (FTA) for entry into the Engineering Phase of this project and pursue federal funding under the competitive federal "New Starts" program. There will be future opportunities for public input as this process progresses.

Red Ahead

The Red Line Extension is part of the CTA's Red Ahead program, a comprehensive initiative for maintaining, modernizing, and expanding Chicago's most-traveled rail line. The Red Ahead program also includes the Red Line South Reconstruction Project (completed 2013), the 95th Street Terminal Project (beginning in summer 2014), the Wilson Station Reconstruction Project (beginning in fall 2014), and the Red and Purple Modernization program (currently in planning).

Estimated Travel Time Savings

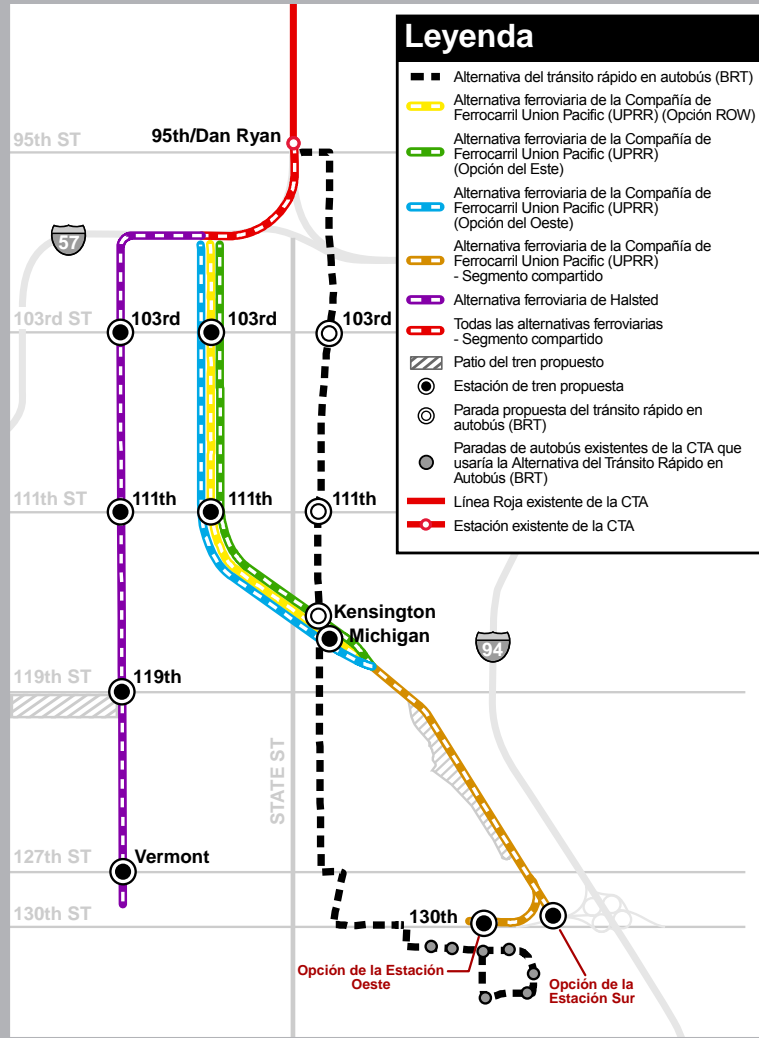

**Red Line
Extension**

Extensión de la Línea Roja: Extender el acceso al tránsito hasta el lado del sur lejano de Chicago

La Chicago Transit Authority (CTA) se propone agregar nuevo servicio mayor de tránsito al lado del sur de Chicago al extender la línea ferroviaria más transitada, la Línea Roja, hasta el sur desde la Terminal de la calle 95 Street hasta las proximidades de la calle 130. La extensión propuesta de 5.3 millas incluiría cuatro nuevas estaciones cerca de las calles 103, y 111, la avenida Michigan/calle 116, y la calle 130 – cada nueva estación incluiría instalaciones para autobuses y estacionamiento. La CTA está en vías de evaluar los efectos ambientales de tres opciones para la Alternativa Localmente Preferida a lo largo de la red ferroviaria de la Compañía de Ferrocarril Union Pacific (“UPRR”, por sus siglas en inglés), lo cual incluiría una opción dentro de la servidumbre de cargo existente (“Opción ROW”, por sus siglas en inglés), una Opción del Este, y una Opción del Oeste. Está considerándose también una alternativa ferroviaria por Halsted Street y una alternativa de tránsito rápido en autobús (“BRT”, por sus siglas en inglés) a lo largo de la avenida Michigan.

Alternativas para la extensión de la Línea Roja

¿Por qué es el Proyecto de Extensión de la Línea Roja importante?

- **Acceso ampliado y mejoras en el servicio** – La Extensión de la Línea Roja mejoraría el servicio y la accesibilidad al tránsito para los vecindarios del lado del sur lejano donde los residentes que dependen del tránsito actualmente carecen de acceso directo al servicio ferroviario.
- **Tiempos reducidos del desplazamiento al trabajo** – Entre 2005 y 2010, el tiempo del desplazamiento al trabajo eran, en promedio, 20 por ciento más largo para las personas que actualmente viven en el área a que brindaría servicio la Extensión de la Línea Roja que para los otros viajeros en la región de Chicago. La Extensión de la Línea Roja ahorraría al viajero pro medio en las comunidades a quienes beneficiaría este proyecto 87 horas por año.
- **Catalizador para el crecimiento económico** – La CTA calcula que se crearían entre 2,600 y 4,100 trabajos durante la construcción de la Extensión de la Línea Roja. Además, las nuevas estaciones pueden servir de catalizador para la revitalización de vecindarios y ayudaría a revertir décadas de desinversión en los distritos comerciales locales.
- **Habitabilidad aumentada** – Las mejoras también brindarán enlaces a la vivienda asequible, trabajos, servicios, y oportunidades educativas – con el fin de potenciar la habitabilidad y la vitalidad de los vecindarios.

Extensión de la Línea Roja: Últimas noticias sobre el Proyecto

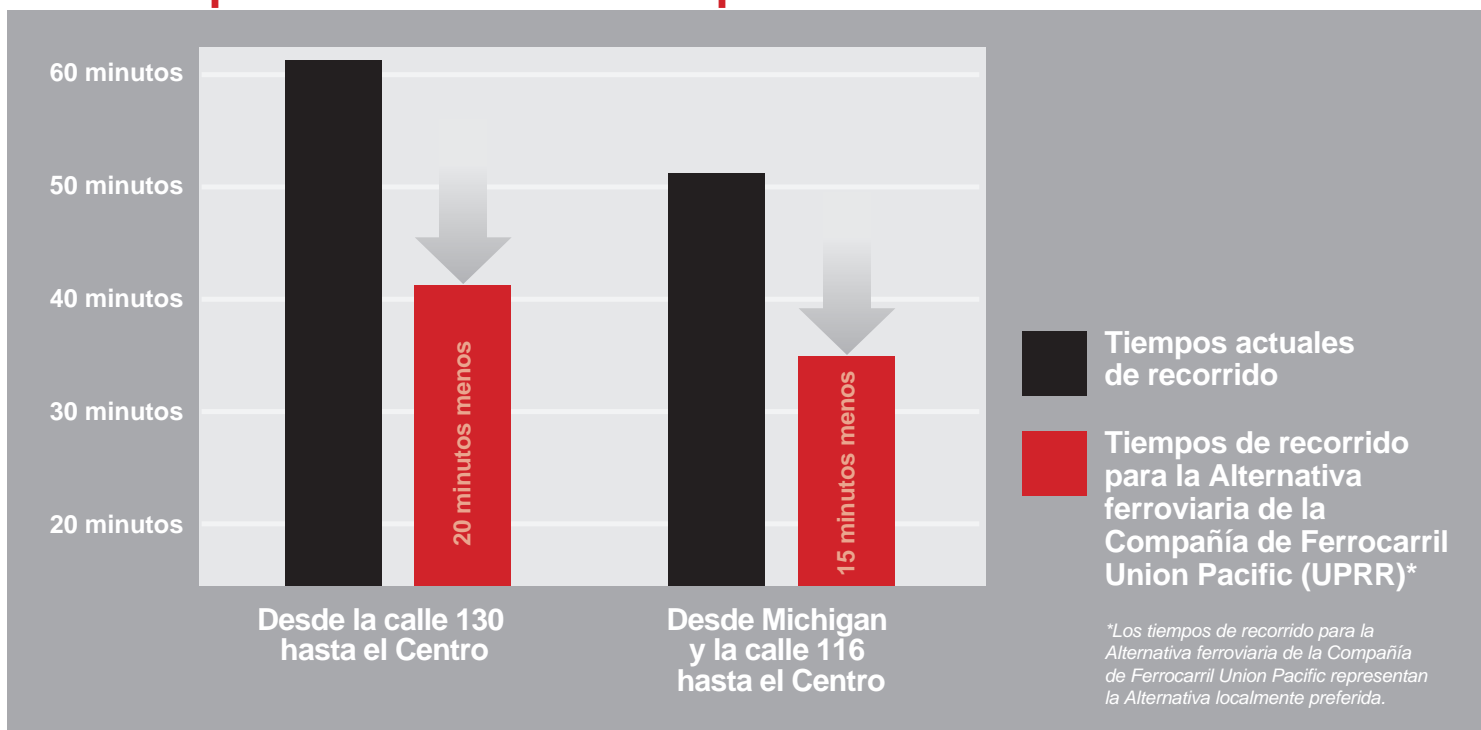

La CTA está progresando en lo que es un proceso federal de múltiples etapas para conseguir la aprobación y el financiamiento para el proyecto. La CTA está en vías de llevar un análisis ambiental técnico de las alternativas del proyecto y está elaborando una Declaración de los Efectos Ambientales en borrador ("EIS", por sus siglas en inglés), la cual se espera que sea publicada a principios del 2015. La Declaración de Efectos Ambientales (EIS) en borrador describiría cada alternativa, explicaría el marco ambiental existente y el contexto comunitario para la ruta propuesta, y repasaría los efectos positivos/negativos potenciales de las obras y las operaciones.

A partir de la aprobación de la Declaración de Efectos Ambientales (EIS), la CTA puede solicitar a la Federal Transit Administration ("FTA", por sus siglas en inglés) permiso para entrar en la Fase de Ingeniería de este proyecto y perseguiría el financiamiento federal bajo un programa federal competitivo llamado "Nuevos Comienzos". Habrá oportunidades futuras para las aportaciones por parte del público a medida que va progresando este proceso.

El Programa Red Ahead

La Extensión de la Línea Roja forma parte del Programa de Red Ahead de la CTA, una iniciativa global para el mantenimiento, la modernización y la extensión de la línea ferroviaria más transitada de Chicago. El programa de Red Ahead también incluye el Proyecto de Reconstrucción de la Línea Roja al Sur (terminado en 2013), el Proyecto de la Terminal de 95th Street (de próximo inicio en el verano de 2014), el Proyecto de Reconstrucción de la Estación de Wilson (de próximo inicio en el otoño de 2014), y el Programa de Modernización de las Líneas Roja y Púrpura (actualmente en etapa de planificación)

Ahorro aproximado de los tiempos de recorrido

Glossary of Terms

The following are definitions of terms used as part of the Environmental Impact Statement process.

Affected Environment: The physical, biological, social, and economic setting potentially affected by one or more of the alternatives under consideration.

Alternative: One of a number of specific transportation improvement proposals or options.

Bus Rapid Transit (BRT): BRT is a bus service which provides faster, more efficient, and more reliable service than an ordinary bus line. Often this is achieved by making improvements to existing street and traffic infrastructure. Typically high-capacity, uniquely-identified buses are used.

Chicago Department of Transportation (CDOT): CDOT is the City of Chicago agency responsible for transportation.

Chicago Metropolitan Agency for Planning (CMAP): The planning organization for the Chicago region. CMAP has prepared the GO TO 2040 comprehensive regional plan that provides strategies for the regional transportation network.

Chicago Transit Authority (CTA): The CTA is an independent governmental agency created by state legislation. It operates the nation's second largest public transportation system and covers the City of Chicago and 35 surrounding suburbs. CTA is the local lead agency on the RLE Project.

Core Capacity: A new federal program to fund substantial improvements to existing transit lines that are currently (or expected to be in the next five years) at or over capacity. This means that trains and/or stations are overcrowded and additional service cannot be added without the proposed improvements. To be eligible, these projects must increase passenger carrying capacity by at least 10 percent.

Cumulative Impact: The incremental environmental impact or effect of the project when added to the impacts of other separate past, present, and reasonably foreseeable future actions.

Environmental Impact Statement (EIS): An EIS is a document that evaluates the economic, social, and environmental effects of a major proposed project. The National Environmental Policy Act (NEPA) requires an EIS to be prepared when federal funds are being sought to fund all or part of a project.

Environmental Justice: Environmental Justice is the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to transportation planning and decision-making processes, per Executive Order 12898.

Federal Transit Administration (FTA): The FTA is a division of the U.S. Department of Transportation that funds transit planning and programs. FTA is the federal lead agency on the RLE Project.

Impact: An impact is a change in the condition or function of an environmental resource that occurs as a result of the proposed alternative. An impact can be adverse (negative) or beneficial (positive), permanent or temporary.

Lead Agency: The agency or agencies responsible for preparing the EIS in compliance with the NEPA. The FTA and CTA are the lead agencies for the RLE Project.

Locally Preferred Alternative (LPA): The Union Pacific Railroad (UPRR) Rail Alternative was selected by the Chicago Transit Board as the LPA in August 2009, indicating that it is the alternative that best meets the purpose and need of the project while addressing potential impacts and other potential constraints.

Mitigation: Action or measure taken to minimize, reduce, eliminate, or rectify the adverse impacts of a project, practice, action, or activity.

National Environmental Policy Act (NEPA): Requires all agencies to examine and disclose the environmental impacts of their actions, incorporate environmental information into project decisions, and use public participation in the planning and implementation of all actions.

National Register of Historic Places (NRHP): The national list of districts, sites, buildings, structures, and objects significant in American history, architecture, archaeology, engineering, or culture. It is maintained by the Secretary of the Interior under authority of Section 101(2)(1)(A) of the National Historic Preservation Act, as amended.

NEPA Preferred Alternative: The NEPA Preferred Alternative will be designated following circulation of the Draft EIS and consideration of all comments received in accordance with NEPA.

New Starts: FTA's primary grant program for funding major transit capital investments, including rapid rail, light rail, bus rapid transit, commuter rail, and ferries.

No Build Alternative: The No Build Alternative refers to an alternative under which no action would be taken (no infrastructure would be built and no new management or operational practices would be instituted).

Option: One of the several possibilities for an alternative. The UPRR Rail Alternative has three options: ROW Option, East Option, and West Option, each along the same general alignment but slightly different.

Right-of-Way (ROW): In transit usage, the corridor along a railway that is controlled by a transit or transportation agency/authority.

Scoping: An early and open process for identifying the extent, variety, and significance of issues related to a proposed action in the EIS. Scoping for RLE was held in the form of public open house meetings in 2009 and the scoping report is available on CTA's website.

Section 4(f): Section 4(f) of the Department of Transportation Act of 1966 states that no transportation project should be approved which requires the use of land from a public park, recreation area, wildlife and waterfowl refuge, or historic site unless there is no feasible or prudent alternative to the use of such land.

Section 106: Section 106 of the National Historic Preservation Act deals with project effects on historic properties. It requires consultation with parties with expertise and interest in historic resources.

State Historic Preservation Office (SHPO): The official appointed or designated, pursuant to Section 101(b)(1) of the National Historic Preservation Act, to administer the State historic preservation program. The SHPO consults with state and federal agencies during the Section 106 process review. The SHPO administers the national historic preservation program at the State level, reviews National Register nominations, and maintains file data on historic properties that have been identified but not yet nominated. Agencies seek the view of the SHPO in the identification of historic properties and the assessment of the effects of a project on historic properties.

Travel Time: The time spent traveling from a place of origin to a place of destination.

Union Pacific Railroad (UPRR): The UPRR owns and operates tracks and trains that run through the project corridor along Eggleston Avenue.

More Relocation Information

Business

A business that is relocated as a result of the project may

be entitled to benefits such as:

1. *Moving and Related Costs*
2. *Reestablishment Costs*
3. *Fixed Payment*

Statements applicable to all categories and benefits listed

Please keep in mind that there are specific benefit requirements that must be met to receive any of the funds mentioned above. Your assigned relocation agent will assist you to fully understand the payments and requirements.

No one may be displaced until adequate housing has been made available to them.

All persons required to move personal property, their home, or business must be given at least 90 days to vacate.

Your Local Transit Agency will establish an appeal process should you be aggrieved by a denial of benefits or if you feel the benefits are inadequate.

A message from the FTA and your local transit agency

It is sometimes necessary to acquire private property and displace persons and businesses in order to build a transit facility that will benefit the entire community. However, we will work with you to minimize the inevitable disruption that this causes. Please feel free to contact the agency and person listed below should you have any further questions.

Revised rules for the Uniform Act were published in the Federal Register on January 4, 2005. The rules are reprinted each year in the Code of Federal Regulations, Title 49, Part 24. All Federal, State and local government agencies, as well as others receiving Federal financial assistance for public programs and projects, that require the acquisition of real property, must comply with the policies and provisions set forth in the Uniform Act and the regulation.

For further information, please contact:

FTA | U.S. DEPARTMENT OF
TRANSPORTATION 
FEDERAL TRANSIT ADMINISTRATION

SEE THE BACK PANEL OF THIS BROCHURE FOR
INFORMATION ON CONTACTING YOUR LOCAL AGENCY.

GENERAL INFORMATION

Your local transit agency may need to purchase property from you with funding from the Federal Transit

Administration (FTA) in order to benefit the general public. To assure fair and consistent treatment of all

persons, the FTA will require your local transit agency to follow the Uniform Relocation Assistance and Real Property Policies Act of 1970, as amended. The Uniform Act is a law passed by Congress to promote uniformity and fairness when a local transit agency must acquire property or displace persons. There are two main parts of this process:

1. *Acquisition, which is the purchase of your real estate.*
2. *Relocation which offers additional benefits should you or your business be displaced.*

Acquisition of Real Property

The purchase of real estate by a transit agency begins with the appraisal of your property. An appraiser will inspect your property to determine the value. The property owner should accompany the appraiser while making this inspection. A second appraiser will then review and approve the work of the first appraiser and will recommend a value to the local transit agency.

You should then receive a written offer to purchase your property. You will have sufficient time to consider the offer or make any counter offers that you believe is fair.

If you elect to sell your property to the local transit agency, you will be paid the full amount less any encumbrances (mortgage, lien, etc.) owed on that property. Possession of vacant property may be taken the day of closing by the local transit agency; possession of occupied property will be at an agreed future date.

Relocation

Advisory Assistance will be offered to every displaced person. A Relocation Agent will visit you to explain all of the benefits and services that you may be eligible to receive.

Below is a very brief outline of the various types of financial benefits available if you or your business are required to move.

Residential Homeowner Occupants, are those that have owned and occupied their home for at least 180 days. Typical benefits include:

1. *Moving Costs*
2. *Price Differential Payment*
3. *Increased Mortgage Interest*
4. *Incidental Closing Costs*

90 day Occupant or Tenant, is either a tenant or a homeowner that has occupied their home for less than 180 days but at least 90 days. Relocation benefits include:

1. *Moving Costs*
2. *Rental Assistance Payment/Down Payment*

Appendix H

Open House Exhibit Boards

Welcome to the Red Line Extension (RLE) Open House

The purpose of this meeting is to:

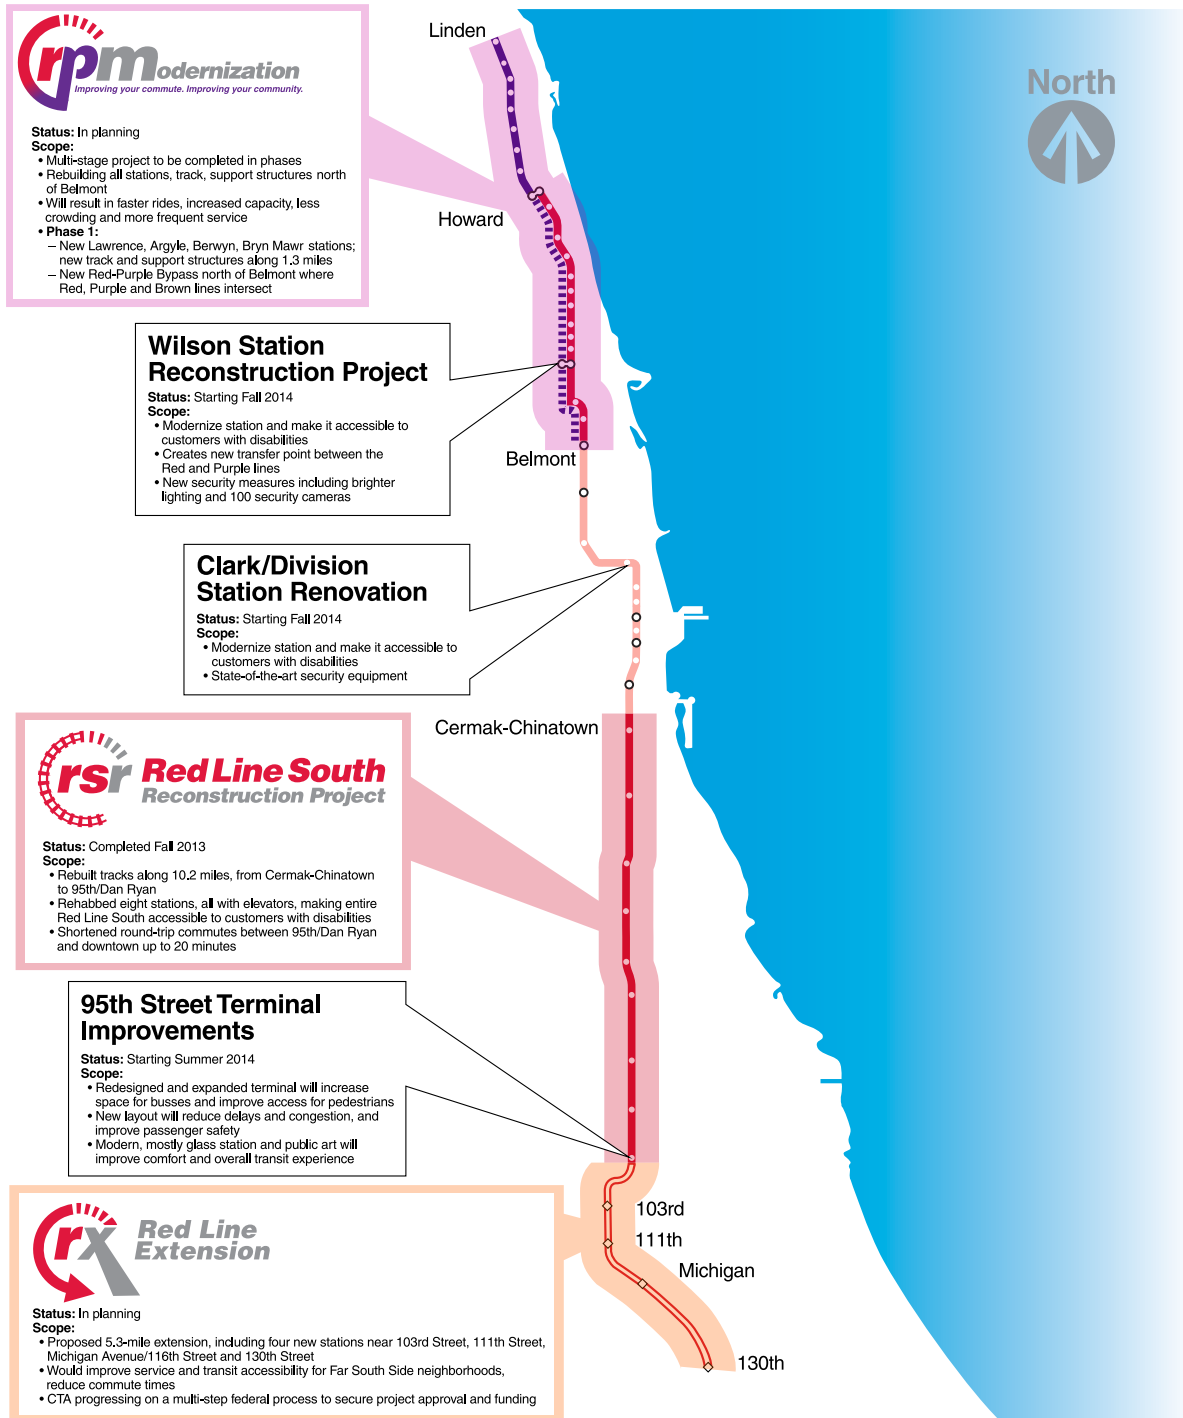

- Provide information on the RLE Project
- Share findings regarding anticipated project benefits and impacts
- Hear and gather your feedback and suggestions
- Discuss next steps and additional opportunities to be involved

If you have questions, feel free to ask the representatives stationed around the boards.

The Red Ahead Program

Improving the Red Line from End to End

What is the RLE Project?

The end of the line for the CTA's Red Line South is currently the 95th/Dan Ryan Terminal.

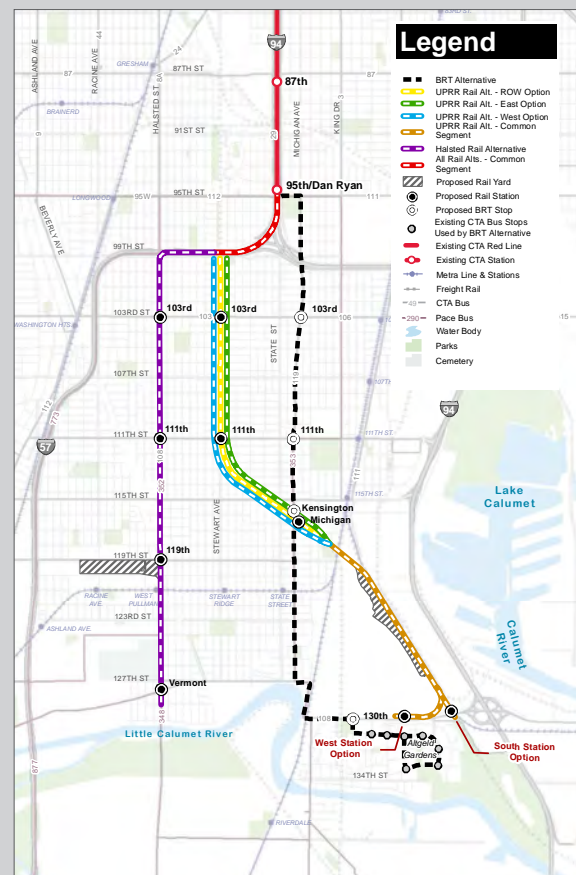

This year, construction will begin on the 95th Street Terminal Improvement Project, which will expand and greatly improve the 95th/Dan Ryan Terminal.

With the estimated \$2.3B Red Line Extension (RLE) Project, CTA is proposing to extend service from south of 95th/Dan Ryan Terminal to the vicinity of 130th Street.

RLE Means a Better Served Far South Side

The Red Line Extension Project would:

- Serve a transit dependent area of the City that does not have direct CTA rail service.
- Provide a faster commute. The RLE would offer a 20-minute time savings by providing one-seat service, as opposed to the current bus-rail trip from 130th Street to downtown.
- Include four new stations, a new rail yard, plus bus and parking facilities at all stations.

Why are we preparing an Environmental Impact Statement (EIS)?

An EIS allows the public to fully understand the potential environmental impacts and provide input before final decisions are made.

Transportation projects seeking Federal funding are required to conduct environmental analysis. An EIS is being prepared for the RLE Project by CTA and Federal Transit Administration (FTA).

Public feedback on the preliminary impacts of the alternatives is necessary to complete the Draft EIS.

The EIS includes:

- A description and comparison of alternatives
- An explanation of the existing environmental setting
- An analysis of potential positive and negative environmental impacts of construction and operation of each alternative
- Proposed mitigation measures to reduce or eliminate potential negative impacts

Project Alternatives: UPRR Rail Alternative

Chicago Transit Board Adopted Alternative

5.3-mile extension along the UPRR tracks

Three options:

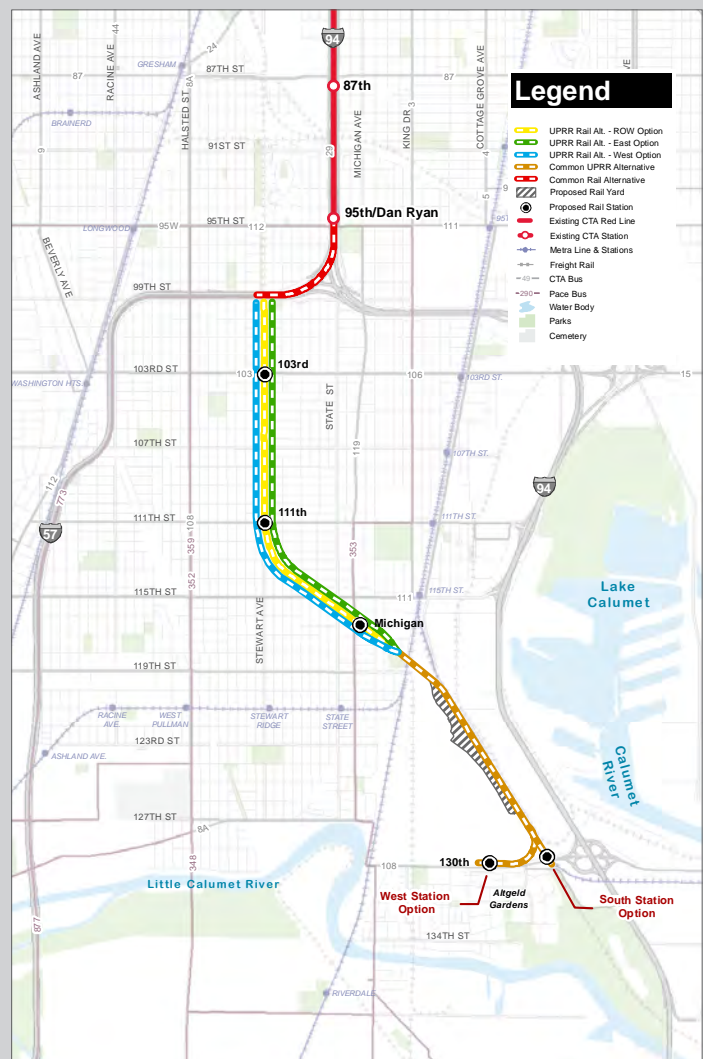

- East Option
- Right-of-Way (ROW) Option (contingent upon the relocation of UPRR, significant cost and delay TBD)
- West Option

Four stations (103rd, 111th, Michigan, 130th)

- Park & ride facilities (up to 3,700 total parking spaces)
- Bus facilities

Elevated structure from 95th Street Terminal to 119th Street, then at-grade (ground level) tracks from 119th Street to 130th Street

120th Street Yard and Shop

Project Alternatives: UPRR Rail Alternative

Visualizations

Existing - 115th Street and UPRR Tracks

ROW Option

East Option

West Option

Note that appearance of project elements (such as parking structures, beams, columns, etc.) in visualizations is intended to show scale of project elements. Actual construction appearance may differ based on design decisions for colors, textures, finishes, and choice of specific design features.

Project Alternatives: UPRR Rail Alternative

Visualizations

East Option - 103rd Street Station
103rd Street and Harvard Avenue

East Option - 111th Street Station
111th Street and UPRR Tracks

East Option - Michigan Avenue Station
115th Street and Michigan Avenue

130th Street Station - South Station Option

Note that appearance of project elements (such as parking structures, beams, columns, etc.) in visualizations is intended to show scale of project elements. Actual construction appearance may differ based on design decisions for colors, textures, finishes, and choice of specific design features.

Project Alternatives: Halsted Rail Alternative

5-mile extension above Halsted Street

Four stations (103rd, 111th, 119th, Vermont)

- Park & ride facilities (up to 3,700 total parking spaces)
- Bus facilities

Elevated structure

119th Street Yard and Shop

Project Alternatives: Halsted Rail Alternative

Visualizations

103rd Street Station
103rd Street and Emerald Avenue

111th Street Station
111th Street and Halsted Street

119th Street Station
118th Street and Halsted Street

Vermont Avenue Station
128th Street and Halsted Street

Note that appearance of project elements (such as parking structures, beams, columns, etc.) in visualizations is intended to show scale of project elements. Actual construction appearance may differ based on design decisions for colors, textures, finishes, and choice of specific design features.

Project Alternatives: BRT Alternative

5.5-mile long Bus Rapid Transit (BRT) Route along Michigan Avenue

The BRT Alternative is a “low cost” alternative. It would run along Michigan Avenue, which has one of the CTA’s busiest bus routes.

Four BRT stops

- Improved bus shelters (103rd, 111th, Kensington, and 130th)
- Park & ride facilities (up to 2,800 total parking spaces)

Bus route would continue through Altgeld Gardens making existing stops

No dedicated bus lanes; parking lanes would be removed in some locations

No Build Alternative

The No Build Alternative is used to compare the other alternatives to the current state and existing service. No new infrastructure would be built.

Potential Impacts to Parks

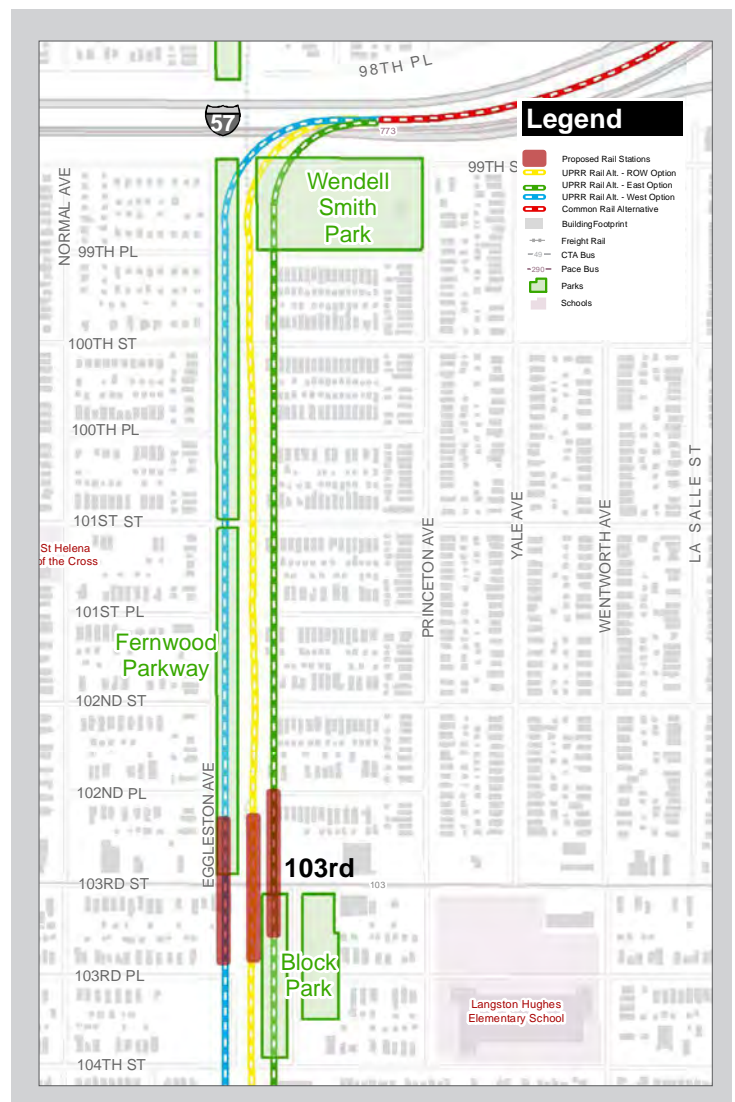

Only the UPRR Rail Alternative would impact parks.

Parklands Affected by UPRR Rail Alternative Options

Parkland	East Option	ROW Option	West Option
Wendell Smith Park	0.4 acres	0.2 acres	0.2 acres
Fernwood Parkway	-	-	1.9 acres
Block Park	0.8 acres	-	-
<i>Total</i>	<i>1.2 acres</i>	<i>0.2 acres</i>	<i>2.1 acres</i>

Preliminary Mitigation Strategies

Coordination with Chicago Park District is ongoing to identify mitigation including improvements to other parklands or replacement parklands nearby.

Potential Property Displacements

Construction of the project would require the acquisition of property.

Permanent Displacements by Alternative

	UPRR East Option	UPRR ROW Option	UPRR West Option	Halsted	BRT
Affected Parcels without Building Displacements	149	112	144	72	49
Affected Parcels with Building Displacements	110	22	51	38	3
(Residential Building Displacements)	(95)	(17)	(30)	(17)	(1)
<i>Total Affected Parcels</i>	<i>259</i>	<i>134</i>	<i>195</i>	<i>110</i>	<i>52</i>

Impacts presented are:

- Based on Conceptual Engineering and represent maximum impacts on all alternatives
- For the purposes of comparing alternatives and will be confirmed in the Final EIS following more detailed conceptual design of the single NEPA preferred alternative

All major transit construction projects have impacts:

- The Brown Line Expansion had 40 building displacements
- The RPM Program (Phase One) may displace 19 buildings

Preliminary Mitigation Strategies

Property owners would be paid not less than fair market value for their land and buildings, and may be eligible for compensation equal to the original purchase price of the property. They would also be assisted in relocating their businesses or dwellings, per the Federal Uniform Act on relocation assistance and property acquisition.

When a single alternative or option is chosen, CTA will work with the community and property owners to minimize property impacts.

Potential Noise Impacts

Noise Impacts by Alternative

	UPRR East Option	UPRR ROW Option	UPRR West Option	Halsted	BRT
Moderate and Severe Noise Impacts	None	None	None	Moderate impacts would remain after mitigation	Moderate impacts south of 120th Street
Vibration Impacts	None	None	None	None	None

Moderate Noise Impacts: The change in noise would be noticeable but might not be sufficient to cause a strong, adverse community reaction

Severe Noise Impacts: A significant percentage of the population would be highly annoyed by the change in noise

Preliminary Mitigation Strategies

Continuous welded rail

- Fewer joints mean a smoother and quieter ride

Jointed Rail versus Welded Rail

Closed deck structure

- Limits noise beneath the elevated tracks

Open Deck versus Closed Deck

Noise barriers

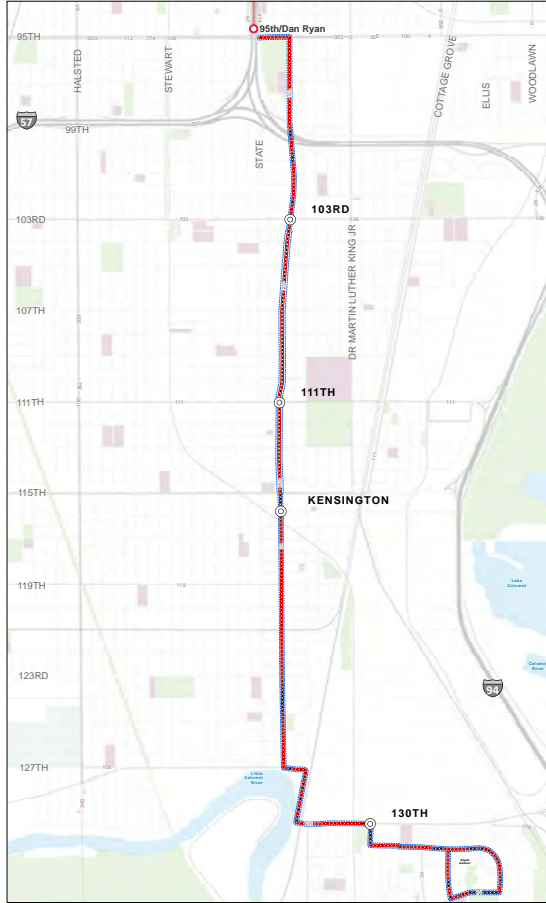

- Absorb railway noise

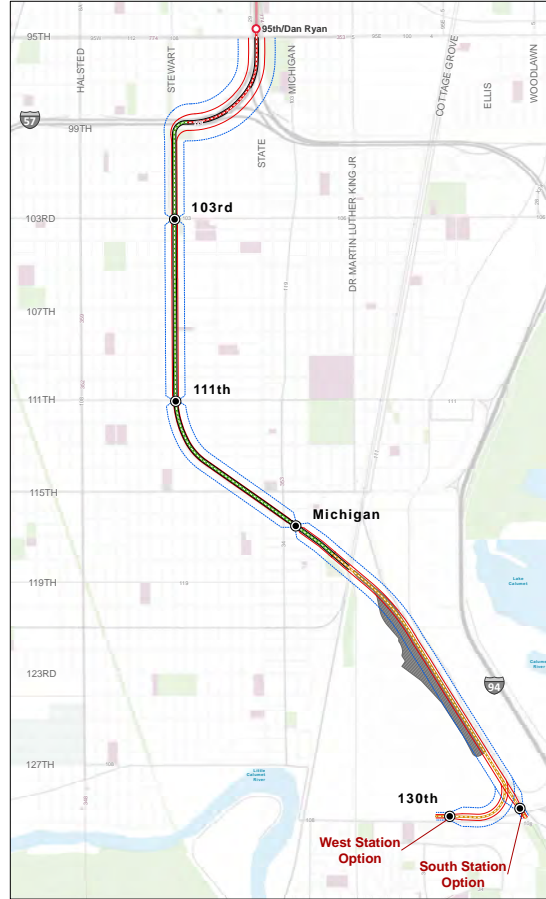

Noise Barriers

Potential Noise Impacts and Mitigations

BRT Alternative

UPRR Rail Alternative East Option

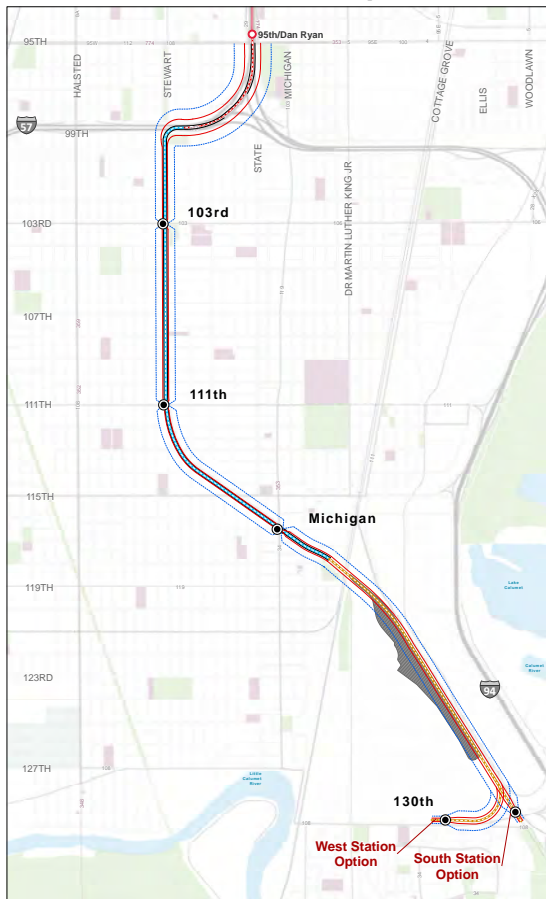

Legend

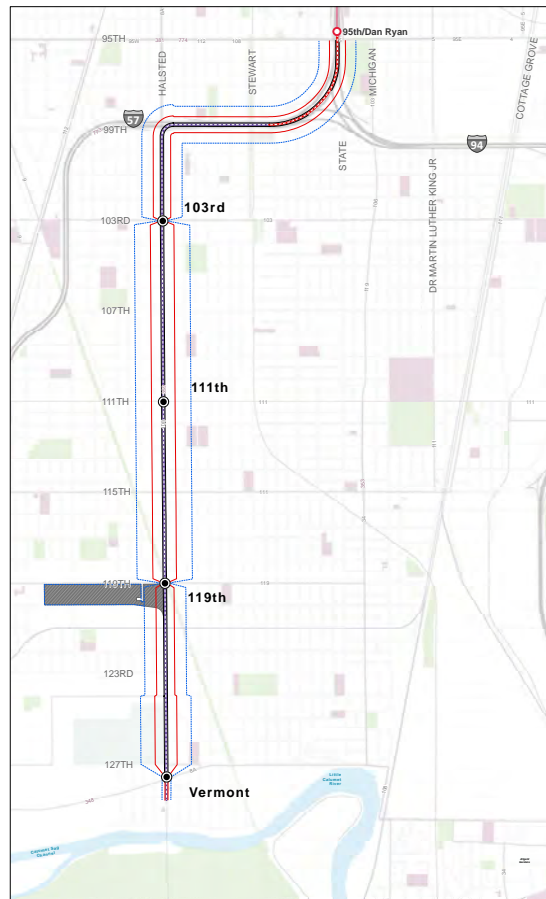

- Mitigation - Noise Barriers
- Noise Contours
- Moderate Impact
- Severe Impact
- Common Rail Alternative
- Common UPRR Alternative
- UPRR Rail Alt. - ROW
- UPRR Rail Alt. - West Option
- UPRR Rail Alt. - East Option
- Halsted Rail Alternative
- BRT Alternative
- Proposed BRT Stop
- Existing CTA Red Line
- Existing CTA Station
- Metra Line & Stations
- Freight Rail
- CTA Bus
- Pace Bus
- Water Body
- Parks
- Cemetery
- Schools

Impacts presented are based on Conceptual Engineering and represent maximum impacts. Impacts and mitigations will be confirmed in the Final EIS following more detailed design of the NEPA preferred alternative.

UPRR Rail Alternative West Option

Halsted Rail Alternative

Potential Visual and Community Impacts

Visualizations

UPRR Rail Alternative

West Option

East Option

Existing

Visualization

102nd Place and Eggleston Avenue

117th Street and Prairie Avenue

Note that appearance of project elements (such as parking structures, beams, columns, etc.) in visualizations is intended to show scale of project elements. Actual construction appearance may differ based on design decisions for colors, textures, finishes, and choice of specific design features.

Potential Visual and Community Impacts

Visualizations

Halsted Rail Alternative

Existing

Visualization

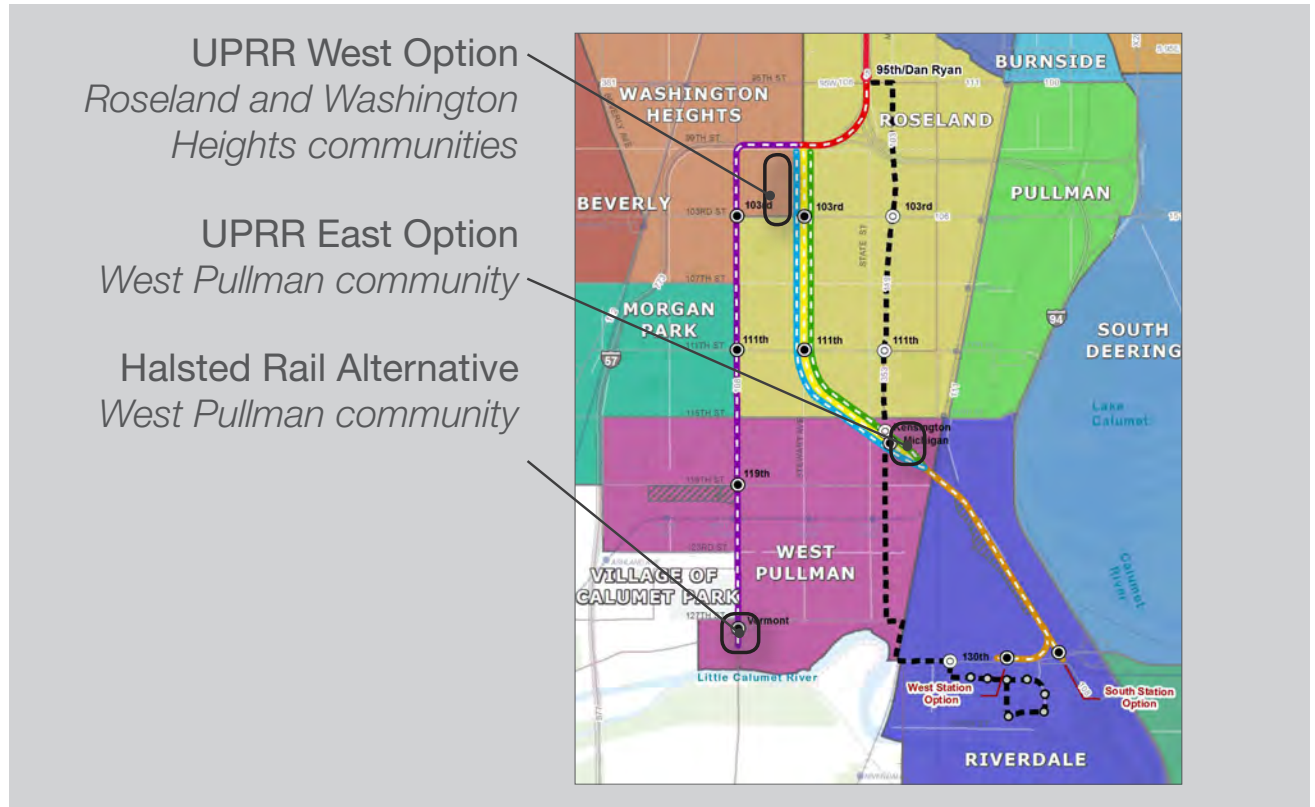

100th and Halsted Streets

Vermont Avenue and Halsted Street

Note that appearance of project elements (such as parking structures, beams, columns, etc.) in visualizations is intended to show scale of project elements. Actual construction appearance may differ based on design decisions for colors, textures, finishes, and choice of specific design features.

Potential Visual and Community Impacts

Preliminary Mitigation Strategies

- Provide new landscaping or other urban design amenities
- New structures would reflect the character of neighborhoods or communities to the extent feasible
- Careful placement of exterior lighting adjacent to residential communities
- Construction best management practices including maintaining vegetation and debris-free construction areas

Potential Effects to Historic Properties

- Historic experts evaluated a sample of 541 properties near the project alternatives
- CTA/FTA invited interested parties to help evaluate potential historic resources
- CTA/FTA identified two historic districts and 13 properties that have been recommended for inclusion on the National Register of Historic Places

Adverse Effects by Alternative

	UPRR East Option	UPRR ROW Option	UPRR West Option	Halsted	BRT
Effected Properties	0	0	0	4 adversely effected after mitigation <i>but not demolished</i>	0

Preliminary Mitigation Strategies

Consultation with the State Historic Preservation Office and other interested parties is ongoing to confirm effects and identify mitigation strategies.

An adverse effect occurs when a project alters (directly or indirectly) any of the characteristics of a historic property that qualify it for the National Register, diminishing the integrity of its location, design, setting, materials, workmanship, feeling, or association.

931 W. 120th Street (Fire Department Engine House)

12433 S. Halsted Street (S.S. Peter and Paul Church)

12540 S. Halsted Street (Cedar Park Cemetery)

10227 S. Halsted Street (Former Classic Revival Substation)

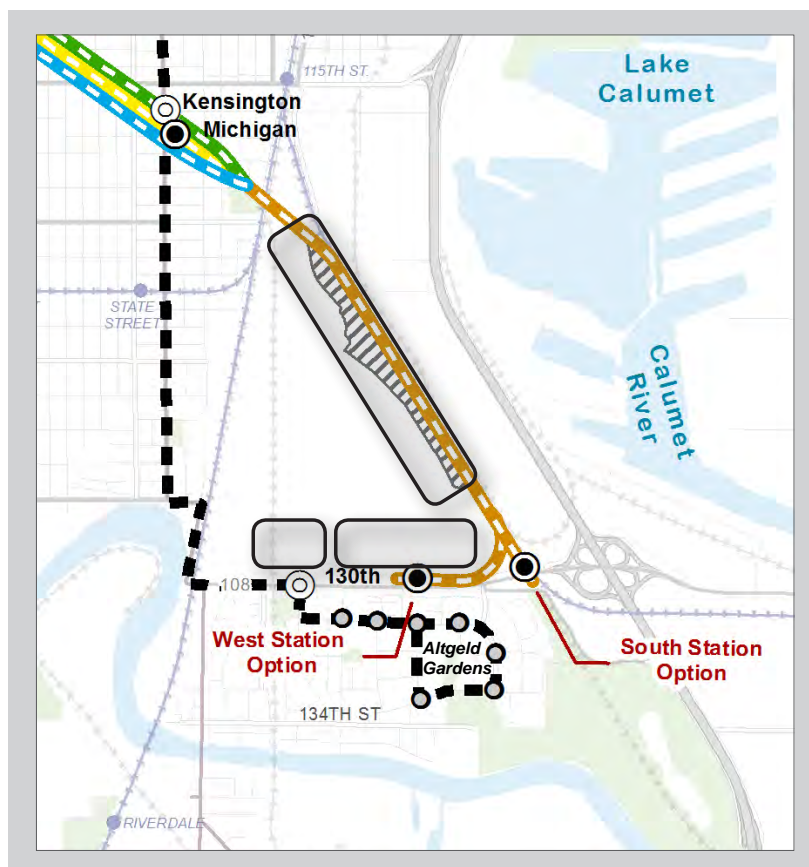

These properties will not be demolished but would have potential adverse effects due to potential visual, noise, or construction impacts.

Impacts to Wetlands

Impacts to potential wetlands could occur at the UPRR 120th Street yard and shop, the West Station Option, the South Station Option, and/or the BRT 130th Street park & ride. Impacts to wetlands have not yet been confirmed.

Preliminary Mitigation Strategies

- Replace, restore, enhance, or preserve wetlands

Temporary Construction Impacts

Preliminary Mitigation Strategies

- Notices of noise-generating activities would be posted
- Road closures would be announced
- Special advertising for affected businesses
- Limited idling of construction vehicles
- Alternative parking provisions

Minimal Impact Areas

- Land Use
- Safety & Security
- Environmental Justice
- Energy
- Transportation
- Water Resources
- Biological Resources
- Hazardous Materials
- Air Quality

RLE Project Benefits

- Increase access to affordable housing, hospitals, schools, and other community facilities
- Encourage community investment and economic development
- Create direct construction jobs
 - Rail alternative estimated to create 2,600 to 4,100 jobs
- Increase access to jobs
 - Newly accessible jobs within an hour commute of the proposed 111th Street station would increase by 56% (CMAP 2012)

Ridership Benefits

	UPRR (All Options)	Halsted	BRT	No Build
Estimated Annual Trips*	13,000,000	12,000,000	1,000,000	0

*Rides taken on the RLE (95th Street to 130th Street)

JKE IIT 96@hotmail.com
☒ Check here to also receive updates about other projects along the Red Line.

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

I have resigned myself to the fact that the Red Line Extension is years away from completion. In the INTERIM, I propose a TEMPORARY RED LINE EXTENSION via one of the following routes

- A State, 103rd Westworth, 119th, Michigan 127th, Indiana & 130th between 95th Street and FOMOCO
- B State, 127th Indiana, 130th
- BOTH: Stops would be limited to 103rd, 107th, 111th, 115th, 119th 127th; METROWATER, and FOMOCO

How do you use the following parks? (Check all that apply)

OVER →

	Baseball / Softball / Basketball	Playground	Walking / Jogging	Community Events	Other	I do not use this park
Wendell Smith Park (93rd Street / Princeton Avenue)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Fernwood Parkway (Eglington Avenue between 93rd and 103rd Street)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Block Park (103rd Street / Harvard Avenue)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Additional Comments:

- 1 Michigan Avenue is WAY TOO Narrow for a BRT of any kind
- 2 Halsted Street is MUCH BETTER SUITED for a BRT, a Subway, or an overhead system. A Light Rail should be avoided. Remember the 1950 Streetcar Crash @ 63rd & State
- 3 My proposed Halsted Street BRT should run from the GRESHAM Metro (Rock Island) Station @ 86th Vincennes and Halsted to FOMOCO via Vermont, 127th Indiana and 130th Streets, with stops @ 95th, 99th, 103rd, 107th, 111th, 115th, 119th, 123rd, 127th Vermont, Halsted Bus Terminal, State/Michigan, Metro Water Reclamation and FOMOCO

SUMMARY & SYNOPSIS

The area between 79th Street to the Southern City Corporate Limits and between Ashland and the State Line IS A TRANSIT DESERT. SOME FORM OF INTERIM RAPID TRANSIT IS NECESSARY. That interim system should be implemented most quickly at the lowest possible cost. It should also be a 24/7/365-6 alternative.

Thank you for attending this CTA Red Line Extension Project open house.

☒ Check here to also receive updates about other projects along the Red Line.

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

- The rail alternatives must be pursued. The "BRT" Line may not have a dedicated lane which means it would get stuck in traffic.
- If the UPRR Alternative is pursued, pedestrian access must be addressed ~~across~~ for 130th street. It's not pedestrian friendly at the moment.
- Parking should be minimal at best. Creating large parking lots adjacent to the sidewalk is poor planning because it is not pedestrian friendly. Areas around stations should have (cont.)

How do you use the following parks? (Check all that apply)

	Baseball / Softball / Basketball	Playground	Walking / Jogging	Community Events	Other	I do not use this park
Wendell Smith Park (99th Street / Princeton Avenue)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Fernwood Parkway (Egleston Avenue between 99th and 103rd Street)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Block Park (103rd Street / Harvard Avenue)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Additional Comments:

(cont. from last page) street-level, pedestrian-oriented retail or be mixed with housing. Parking lots would exclude the possibility for Transit Oriented Development on either rail alternative if they are large and sidewalk adjacent.

• I have seen extremely long trains on the UPRR passing through. Could pedestrian underpasses or bridges be constructed? They are long trains that block the intersections, making it impossible to pass.

Thank you for attending this CTA Red Line Extension Project open house.

☒ Check here to also receive updates about other projects along the Red Line.

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

I want to see the Red Line Extension happen. It will help residents get downtown faster and handicapped people can travel easier without having to use the paratransit system. This will also improve the economy in the Greater Rosemont/West Pullman Area. We need jobs.

How do you use the following parks? (Check all that apply)

	Baseball / Softball / Basketball	Playground	Walking / Jogging	Community Events	Other	I do not use this park
Wendell Smith Park (99th Street / Princeton Avenue)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Fernwood Parkway (Erieston Avenue between 99th and 103rd Street)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Block Park (103rd Street / Harvard Avenue)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Additional Comments:

and revitalization like communities
on the north side.

What is the target date for
this project?

Please let me know when the
next meeting will be held

Please hire the residents in our
neighborhood to complete this work.

Lastly, I would like to see the Red Line
run along the existing existing tracks.

Thank you for attending this CTA Red Line Extension Project open house.

☐ Check here to also receive updates about other projects along the Red Line.

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

I want to know about the impact on my house, if there is an additional train that goes by every 10 min 24/7. My house already shakes from the freight train, I do not want additional vibration to. distribute my house any more. How many homes will have to be remove if the train goes along side UPRR? There need to be several different meeting before the project is in final preparation.

How do you use the following parks? (Check all that apply)

	Baseball / Softball / Basketball	Playground	Walking / Jogging	Community Events	Other	I do not use this park
Wendell Smith Park (99th Street / Princeton Avenue)	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Fernwood Parkway (Eggleson Avenue between 99th and 103rd Street)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Block Park (103rd Street / Harvard Avenue)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Additional Comments:

Please take into consideration that most people who live around this new Red Line Extension are older & retired, and on a fix income. Asking these people to move, you should take into consideration the market value, offering them relocation cost and 50 portion of the closing cost. Do not be insensitive to the fact that these people lived here most all their life, and to up root them will affect them emotional. Do not make these decision based on profit but also people life. I would think going down Halsted would be a better decision, this way people won't have to move.

Thank you for attending this CTA Red Line Extension Project open house.

☒ Check here to also receive updates about other projects along the Red Line.

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

The BRT alternative is my preference as it adds to the existing service. Without knowing if there would be bus lines to support access to the proposed rail lines it is not possible for me to see how the rail lines would improve the current situation. I am saying this based on the premise that either the Halsted or Michigan Ave bus service

How do you use the following parks? (Check all that apply)

	Baseball / Softball / Basketball	Playground	Walking / Jogging	Community Events	Other	I do not use this park

Additional Comments:

would be discontinued based on whether the UPRR rail or Halsted rail is built. While all of the plans would reduce traveling times, they also reduce access to the service, as the stops would be severely reduced. Perhaps in the future you can let the public know what supportive bus service, if any, would be available.

Thank you for attending this CTA Red Line Extension Project open house.

Block Park (103rd Street / Harvard Avenue)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Additional Comments:

My main concerns are you had your house built and now paid for and now your home is going to be taken away and you won't get enough money to pay it full for a home at today's prices. We don't want to sell our property at a very low price and don't even come up or left with anything extra.

Be fair to all.
Bless you

Thank you for attending this CTA Red Line Extension Project open house.

☒ Check here to also receive updates about other projects along the Red Line.

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

- BRT IS UNACCEPTABLE
- I AM CONCERNED THAT CTA OR THEIR MGRS. of existing PARK + RIDES (ARCHER OAKVIEW, Logan Sq - BLUE)
- I AM CONCERNED THAT CTA WILL NOT TAKE THE COMMUNITIES NEEDS INTO ACCOUNT AFTER THE DIRT BUS IS COMPLETED.
- I AM CONCERNED ABOUT MITIGATING AIR POLLUTION DURING CONSTRUCTION + OPERATION (OVER)

How do you use the following parks? (Check all that apply)

	Baseball / Softball / Basketball	Playground	Walking / Jogging	Community Events	Other	I do not use this park
Wendell Smith Park (99th Street / Princeton Avenue)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Fernwood Parkway (Eggleson Avenue between 99th and 103rd Street)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/> SWIMMING POOL	<input type="checkbox"/>
Block Park (103rd Street / Harvard Avenue)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Additional Comments:

- I BELIEVE THE ~~WEST~~ WEST STATION
OPTION WILL PROVIDE CTA SERVICE
TO AN EMBARRASSINGLY UNDERSERVED (BY
CTA) COMMUNITY.

- I BELIEVE THE GREATER ECONOMIC
OPPORTUNITY FOR THE CTA, THE
CITY & THE COMMUNITY IS THE
CURRENT PREFERRED OPTION

Thank you for attending this CTA Red Line Extension Project open house.

☐ Check here to also receive updates about other projects along the Red Line.

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

• Except for the service to Altgeld, bus rapid transit does not provide much over the existing alternatives - especially without designated lanes.

• Halsted rail alternative doesn't serve underserved communities to the east (and impacts historic properties)

How do you use the following parks? (Check all that apply)

	Baseball / Softball / Basketball	Playground	Walking / Jogging	Community Events	Other	I do not use this park
Wendell Smith Park (99th Street / Princeton Avenue)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Fernwood Parkway (Eugene Avenue between 99th and 105th Street)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Block Park (103rd Street / Harvard Avenue)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Additional Comments:

* My primary concern is service to the communities East of State - Altgeld and Hegewisch. #30 needs to connect with a South or west ^{station} alternative - there are just as many people living E of Stony Island as there are in Altgeld to the west.

Overall the UPRR alternative ~~or~~ seems to provide the fastest service to the largest # of people.

I think environmental concerns could be mitigated with careful planning - there is a large amount of vacant industrial space to utilize.

Thank you for attending this CTA Red Line Extension Project open house.

☐ Check here to also receive updates about other projects along the Red Line.

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

I do not like/agree with either Station location at 130th. The two locations are very poorly planned in terms of serving the community. For better benefit to the system/community, have the CTA Station at 130th to terminate at the Ford motor plant and the surrounding industrial park. A better location would be the establishment of a major transfer point on

How do you use the following parks? (Check all that apply)

	Baseball / Softball / Basketball	Playground	Walking / Jogging	Community Events	Other	I do not use this park
Wendell Smith Park (99th Street / Princeton Avenue)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Fernwood Parkway (Loganston Avenue between 99th and 103rd Street)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

FIRST, LET ME START BY STATING I FEEL LIKE
I WAS INVITED TO THE PARTY AFTER ITS STARTED.

① PROPERTY VALUES: CONCERNED W/ HOW THIS WILL EFFECT
THE RE SALE VALUE.

② SENIOR RESIDENCE! THE PROPOSED ELEVATED RAIL
LINE ALONG EGGLESTON HAS THE POTENTIAL TO DISPLACE
SENIOR RESIDENCE. NOT ONLY THAT BUT YOU WOULD BE
CHANGING THE ENVIRONMENT, INCREASING CAR AND
PEDESTRIAN TRAFFIC.

How do you use the following parks? (Check all that apply)

	Baseball / Softball / Basketball	Playground	Walking / Jogging	Community Events	Other	I do not use this park
Wendell Smith Park (59th Street / Princeton Avenue)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Fernwood Parkway (Eggleson Avenue between 98th and 103rd Street)	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Block Park (103rd Street / Harvard Avenue)	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Additional Comments:

2 CONT.; IF FORCED TO SALE WILL I GET COMPENSATED.
AND FAIR MARKET VALUE, WHO DETERMINES THAT.
IS THAT BASED ON TODAY'S COST.

③ ENVIRONMENT

④ INCREASED CRIME?

Thank you for attending this CTA Red Line Extension Project open house.

☒ Check here to also receive updates about other projects along the Red Line.

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

It appears to me that your concern is not for the residents. Your primary focus seems to be what can bring the most money for those who will invest in this project. I find that government has little or no concern for the people, even though they say they do. I will be praying that God will do what is best for the population at large and that greed will not dictate your decision.

How do you use the following parks? (Check all that apply)

	Baseball / Softball / Basketball	Playground	Walking / Jogging	Community Events	Other	I do not use this park
Wendell Smith Park (99th Street / Princeton Avenue)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Fernwood Parkway (Eggleston Avenue between 99th and 103rd Street)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Block Park (103rd Street / Harvard Avenue)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Additional Comments:

I have lived at my current resident 1971. I cannot imagine day in and day out listening to a train as it constantly goes by.

I would hate to see an over head train one-half block from my house.

This is a residential area and it would be inappropriate to alter my community to that degree.

If you wanted to buy my property, I would not object, but I definitely would not want to live there if these changes occurred.

Thank you for attending this CTA Red Line Extension Project open house.

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

To ensure that local residents have equal access to some of the projected 2,000 plus construction jobs, the CTA needs to enter into a Community Benefit Agreement with the Developing Community Project. A draft of such an Agreement with the assistance of a pro bono law firm is currently being drafted.

(Continues on the back)

How do you use the following parks? (Check all that apply)

	Baseball / Softball / Basketball	Playground	Walking / Jogging	Community Events	Other	I do not use this park
Wendell Smith Park (99th Street / Princeton Avenue)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Fernwood Parkway (Eggston Avenue between 99th and 103rd Street)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Block Park (103rd Street / Harvard Avenue)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Additional Comments:

Entering into a CBA with a local
Recognized Community Group could become
how of a model for local Residents
can successfully obtain training and
jobs on other public works projects.
Being discussions and negotiations with
DCP early would be very defining
the tension surely to arise regarding
employment opportunities for local Residents
DCP Workforce Collaborative is willing
and able to discuss this matter in more
detail whenever the CTA calls.

Thank you for attending this CTA Red Line Extension Project open house.

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

I'm excited to see the red line extended to 130th Street. Please don't pick the Bus Route. I know it is cheaper and less impact on community but it won't improve commute. The Halsted/Rail Alternative will make too much of an impact ~~but~~ in regard of properties.

How do you use the following parks? (Check all that apply)

May 13, 2014

Red Line Extension Project

To whom it may Concern:

We as residents of 115th and State Street would like to know exactly where the purposed station, the tracks and the parking are going to be at the Michigan Avenue (115th Street Station). In the past we were told various things, such as an Aldi's was to be built at 115th and State. Then all of a sudden the sign disappeared and there is only vacant land from Michigan to State.

Since an environmental survey was done, what are the results for the area where are homes are located? How far east or west, north or south did the survey go? The majority of our homes were built in the late 1800's, hence the name West Pullman, so how will the noise and the vibrations affect the foundation of our home.

Sincerely,

Charles and Stella Brown

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

Please see attachment letter.
Why this meeting today? A focus group is needed before plans are made.
This meeting is probably just a "formality" to say "We asked you for your input."
CTA officials have already decided what will be done. This "Open House" is an insult to the average man's intelligence.

Mr. Gerald Nichols
Representative - CTA
CTA Government and Community Relations
Chicago, Illinois

May 7, 2014

Subject: **95th Street Red Line Extension Project**

Issues: *Accountability, Transparency, Economic Benefits (if any) for 9th Ward Residents

Dear Mr. Nichols:

This is a letter requesting specific, **written answers** to important questions regarding the Proposed 95th Street CTA Red Line Extension.

Please provide the complete list of addresses of homes and businesses slated for demolition in the 9th ward for the 95th Street Red Line Extension Project along both proposed routes.

Where is the complete budget?

According to The Sun-Times:

Construction of a new station at the end of the Current Red Line	\$240 million
Five mile plus extension of the Red Line from 95 th to 130 th Street	\$ 2 billion

Furthermore, sources indicate that there is an additional \$425 million plan to close the Red Line for 5 months with the argument that the closure is needed because the current 95th Street Station has to be rebuilt (even) before it can be extended. Whose fault is that? What have the Aldermen done to take care of their communities on the South Side?

This awful, decrepit condition of the 95th Street Station is the result of years of neglect on the upkeep and safety of the 95th Street Station. Currently, the station is filthy. The concrete block with railings on the east side of the bus terminal is broken in spots, the rails are rusted. There is no evidence that the station has been painted or power washed in years.

Please list the complete, itemized budget for all persons receiving payment. Please list the business names, owners and addresses of all persons receiving compensation. **Who's really making the money on this project?**

<u>Companies</u>	<u>Contracts Amounts</u>
Electrical contractors	\$ _____
Mechanical engineers	\$ _____
Architectural firms	\$ _____
Wrecking companies	\$ _____
Painters	\$ _____
Trash removal/ disposal companies	\$ _____
HVAC companies and specialists	\$ _____
Security systems installers	\$ _____
Construction companies	\$- _____
Portable toilet(s) companies	\$ _____
Project consultants	\$ _____
Specialized Equipment	\$ _____
Lawyers, legal fees, etc.	\$ _____
Any and all other persons receiving compensation	

85% of jobs must reflect the racial diversity of the community in which the construction project(s) will take place (9th Ward). Who's responsible for making this happen for our community?

Who is Melody Carvajal? Who is Melody McKissack?

CTA's Relocation Consultant is Melody Carvajal. What is her job description? What is her **annual salary**? Who appointed her to this position? Is she a licensed real estate broker? Is she an urban planner? What are her educational and

financial credentials? What are her previous achievements as a relocation consultant? Why isn't her voice mail box not yet even set up?

We are requesting a complete list of addresses of all homes and businesses in the 9th ward that will be destroyed.

The people who bought homes in Roseland in the 70's and 80's were young parents buying their first home. And guess what? When the color changes, the service changes. Today, these young parents are now senior citizens on fixed incomes who raised their children, put them through college, took care of elderly parents and paid property taxes all these years. They have roots here. They have neighbors who look out for them in extreme heat and inclement weather. Their homes are part of their legacies that can be passed on to their children. Their fixed incomes and property taxes pay salaries for corrupt politicians at City Hall.

However, sources indicate that Rahm Emanuel only wants to give homeowners what they originally paid for their homes. Please explain how this scheme benefits families whose homes are demolished and taken away from them.

For the record, any and all homeowners who lose their homes must be compensated according to replacement cost value (as determined in their homeowner's **insurance policies**) – not historical evaluation. Homeowners should be compensated for moving expenses and/or relocation costs, home inspections and closing costs on their new home. Displaced homeowners have the right to make a lateral move with no increase in property taxes, homeowners insurance and/or water bills. We need a written, detailed explanation and specific information on how these families will be compensated for their homes being destroyed.

What are the hourly parking fees (rates) for the 4 new stations' parking facilities?

If the purpose of a focus group is to gather data and input, why is this Focus Group being held after all the plans and budgets have been made? How many 9th Ward residents were involved in the initial stages of planning? Is this meeting just a "formality" to say, "Yes. We included you."

This is only Part I of a series of unanswered questions about the Red Line Project. Please send a written response within the next 3 business days. Thank you.

Respectfully,

Nancy Wimberly

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

With regard the certain Historic sites/dwellings this extension should bring an awareness the Pullman Roseland area. It should also finally bring an end to the transportation desert that has separated this portion of the city from the rest of Chicago.
Bravo !!

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

In a 2009 referendum, the community voted to recommend the "Community Route", which follows the Union Pacific rail lines. There were 43,000 people who voted, making it the largest referendum in Chicago history. It is my hope that the choice of the community will be honored!

☐ Check here to also receive updates about other projects along the Red Line.

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

I support the UPRR alternative - whether directly on the ROW or west/east of it. (though east seems to be the less disruptive of the two, so I guess I'd ~~not~~ prefer that). I would ask CTA to consider potential transfer opportunities between Metra and CTA, especially near Kensington station

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

When my polling place was changed to St Thaddaus church from Euclid Park (I voted there since 1967) that put me into another ward, precinct putting my house value to a lower value. Very Frankly I feel as if I have been bamboozled! with your fair market pricing.

☒ Check here to also receive updates about other projects along the Red Line.

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

What ARE the population density numbers within A
1/2 mile OR 1 mile RADIUS of each station on ALL routes?

The UP option SEEMS to terminate in an extremely
low dense AREA! The Halsted option would
not only reach A larger population foot to toe but
would ALSO have A bigger economic development
impact along the Halsted corridor AND the east west corridors

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

IF THE EAST OPTION IS SELECTED I'M CONCERNED ABOUT THE NOISE.
ALSO I DON'T UNDERSTAND WHY THERE IS NO OPTION ~~TO~~ FOR THE RED LINE
EXTENSION BEYOND 95TH DAN RYAN ON AROUND TO THE BISHOP FORD TO
130TH.
WHATEVER RAIL OPTION IS DECIDED THE BRT ALTERNATIVE SHOULD GO
ALONG WITH IT. THE BUS SERVICE IN THAT AREA IS UNDER SERVED NOW.

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

VERY DISAPPOINTED ABOUT THIS PRESENTATION, I'VE ATTENDED BEFORE AND IT DOESN'T LOOK AS THOUGH MUCH TECHNICAL PROGRESS HAS BEEN MADE, THIS SHOULD NOT BE A DECISION BASED ON PRETTY PICTURES, NEED MORE FINANCIAL & TRANSIT RELATED INFO. WHY TO ALIGN TO EAGLE'S GARDENS? WITH SO MANY VACANT LOTS, IT IS SHORT SIGHTED TO FOCUS ON THAT AREA SO FAR REMOVED FROM CITY CENTER. THANKS FOR YOUR CONSIDERATION.

☒ Check here to also receive updates about other projects along the Red Line.

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

Have CTA considered using Rapid Transit Cabs/
 Buses ~~on~~ on the new Halsted Rail Alternative
 line? Since Halsted Street is two lanes running
 both North & South with a divider, it offers
 more space than Michigan Avenue for such
 a propose. I have to believe that it will
 be more cost-effective than operating the existing
 red-line trains/cars on the Halsted Rail Alternative proposal.

☒ Check here to also receive updates about other projects along the Red Line.

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

As that I have been following the project since 2006, I think that the UPRR Alternative East Option would be the best selection because it would eliminate a lot of the existing congestion at the 95th terminal, and it would give riders better options and access that would be coming from the South East suburbs + Northwest Indiana. It would also allow for less congestion on the Bishop Ford Expressway, and allow for more jobs to open up in this corridor.

☒ Check here to also receive updates about other projects along the Red Line.

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

CMAP identified the 'Grey Line' project in 2010 utilizing excess capacity on the Metra Electric to provide CTA access & connectivity to Roseland, West Pullman, Pullman & Hedwisch. The Grey Line could be brought online much more quickly than the Red Line and would complement service for the Red Line. Rapid Transit could be provided for these residents 5 years earlier.

☒ Check here to also receive updates about other projects along the Red Line.

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

the Halsted Rail alternative should not be an option. Halsted is a main street out south. Halsted is busy with rush hour traffic in the a.m. and p.m. the noise of the rail line would be awful, the traffic from the train stops would be awful as well as the look of the overhead tracks. I live one street west of Halsted and would definitely not want the extension to run down Halsted. Economic development is always good for a community, but how do we know the extension down Halsted will REALLY improve our community?

How do you use the following parks? (Check all that apply)

	Baseball / Softball / Basketball	Playground	Walking / Jogging	Community Events	Other	I do not use this park
Wendell Smith Park (99th Street / Princeton Avenue)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Fernwood Parkway (Eggleson Avenue between 99th and 103rd Street)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

☒ Check here to also receive updates about other projects along the Red Line.

What specific comments or concerns do you have about the Red Line Extension alternatives, potential impacts, and mitigation measures?

① - FTA requires a match for funds.
 ① Does CTA have a plan to secure the additional funds? ② Will the additional money needed be paid by the consumers?
 ③ What is the budget for this project?
 ④ Why is CTA asking for approval from the public without a clear financial plan to present to the public?

How do you use the following parks? (Check all that apply)

	Baseball / Softball / Basketball	Playground	Walking / Jogging	Community Events	Other	I do not use this park
Wendell Smith Park (99th Street / Princeton Avenue)	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Fernwood Parkway (Egleston Avenue between 99th and 103rd Street)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Block Park (103rd Street / Harvard Avenue)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Additional Comments:

The entire plan should be submitted before approval is obtained. The plan should have the construction lay-out & financial budget as well.

Thank you for attending this CTA Red Line Extension Project open house.

Sirs:

Although I will not be able to attend the public hearing, I suggest the CTA expand its plan for the Red Line Extension to include the line to extend to just north of I-80 in Lansing with a terminus, triple-decker garage parking area (Kiss n' Ride) with bicycle racks, and rail yard there for all south suburban rides to get to the Loop, with a stop at 159th Street near the River Oaks Mall in Calumet City and one stop at Sibley Boulevard.

Sincerely,

Martin Edward Lewis

I'm open to just about every option except for the Halsted option because that will go to Halsted & 127th, but it won't serve Altgeld Gardens, as residents there feel isolated from the rest of Chicago. I think that the existing #34 South Michigan should be served with articulated buses. I'd go with you purchasing whole new articulated buses or purchasing and refurbishing articulated buses previously used by another transit agency (as well as if your final decision is to implement the BRT route).

Subject: Comments on the Red Line Extension

Chicago Transit Authority, Strategic Planning

567 W Lake St, 10th Fl

Chicago, IL 60661-1465

May 20, 2014

Dear Madam or Sir,

I attended the Open House for the Red Line extension on May 13, and I have several concerns about the project. The overriding issue is that inadequate funds are being committed to such a major project, and because of the inadequacy of the funding, the options for and the scope of the extension are severely limited to the point that the finished product will be a solution that disrupts many, and adequately serves the transportation needs of few.

A subway is needed. Any train that travels above ground will cast a pall on any thoroughway that it is over or near. The support posts and the overhead structure will be intrusive to the street scape, and the clamor of the train and the announcements from the train will be a permanent noise nuisance to people blocks away.

The Halsted overhead alternative is not likely to appeal to anyone with property along the route. What business would welcome an overhead transit structure in front of it? What household would want the noise of an above ground train anywhere within hearing? What pedestrian would choose to walk along a street covered by a set of train tracks? An above Halsted train will take a thoroughway that needs to be lifted up, and turn it into a street that upstanding members of the community try to avoid. Not so for the less upstanding members. The structure and support posts will provide many opportunities for graffiti and for thieves and lawbreakers to hide behind to the detriment of any pedestrians unwise enough to walk down the street.

The Michigan Avenue Bus Rapid Transit is rapid in name only. While the route would serve many, the bus will not be rapid, and will do little more than give true BRT a bad name. I learned at the open house that the BRT will be only 5 minutes faster than the present #34 Michigan. This, as you well know, is nothing like Bus Rapid Transit.

The locally preferred alternative is preferable only because it is the least disruptive to businesses and homes along and near Halsted. The train stations do not seem to serve areas populated by any significant population, and the while the end of the line is nicely located to serve Indianans and suburbanites who want to park and ride, the main purpose of the line should be to serve south siders whose rapid transit needs have been long ignored.

The scope and permanency of any rapid transit project is great enough that accommodation for the future success of the neighborhood should be taken into account before abandoning an option because it's too expensive. If the project cannot be done right, then increased and timely bus service should be added to the affected streets, and the funds should be banked until such time as a commitment to adequate funding can be made. Please do not impose this permanent, noisy, unsightly, and potential crime haven on a thoroughfare that needs a subway.

Sincerely,
Arlene Echols

Dear Madam or Sir;
Can you tell me plse the
current anticipated opening Year of operation
of the Red Line extension all the way down to 130st
I expect it's 2020 or beyond?
Thanks
Rod Muir
