Chicago, IL 60606

Table of Contents

Section 1 Summary	1-1
1.1 Purpose and Scope	1-1
1.2 Identification of Archaeological Resources	1-1
1.3 Identification of Architectural Resources	1-1
1.4 Project Effects	1-2
1.5 Mitigation Recommendations	1-3
1.6 2014-2015 Red Line Extension Project Update	1-3
Section 2 Project Description	2-1
Section 3 Methods for Effect Evaluation	3-1
3.1 Regulatory Framework	3-1
3.1.1 Federal	3-1
3.1.1.1 National Historic Preservation Act of 1966, as Amended	3-1
3.1.1.2 National Environmental Policy Act of 1969	3-2
3.1.1.3 Department of Transportation Act of 1966, as Amended	3-3
3.1.2 State - Illinois	3-3
3.1.3 Local	3-3
3.2 Effect Analysis Thresholds	3-3
3.3 Area of Potential Effects	3-4
3.4 Methods	3-5
3.4.1 Historic Context and Known Sites	3-5
3.4.2 Identification of Historic Resources	3-7
3.4.3 Effects from the Project	3-9
3.4.4 Consultation	3-9
Section 4 Archaeological Resources	4-1
4.1 Prehistoric Context	4-1
4.1.1 Natural Landscape	4-1
4.1.2 Paleoindian Period (10,000 to 8,000 B.C.)	4-2
4.1.3 Archaic Period (8,000 to 1,500 B.C.)	4-3
4.1.4 Woodland Period (1,500 B.C. to A.D. 1,000)	4-4
4.1.5 Mississippian Period (A.D. 1000 to A.D. 1600) and Proto-Historic Period (A.D. 1600-1673)	4-7
4.1.6 Historic Period (1673 to Present)	4-8

4.2	Archaeological Sites in Project Vicinity	4-9
4.3	Potential for Project Effects	4-10

Section 1 Summary

1.1 Purpose and Scope

Archeological and historic specialists on the CWC Transit Group team (Midwest Archaeological Research Services, Inc. [MARS, Inc.], independent consultant Jean Guarino, and CDM Smith) conducted a cultural resources overview analysis of archaeological sites and aboveground historic structures that may be affected by the Chicago Transit Authority's (CTA's) proposed Red Line Extension (RLE) Project. These specialists compiled the available records and datasets, conducted fieldwork, and prepared this technical memorandum, which is the historic and cultural resources analysis that will be presented in the Draft Environmental Impact Statement (Draft EIS).

This report follows the general outline of the analysis steps required by the National Historic Preservation Act (NHPA): the identification of historic resources, an assessment of effects of the project on historic resources, and the resolution of adverse effects through avoidance, minimization, and/or mitigation efforts. Additional sections describe the area of potential effects (APE), provide an overview of archaeological investigations, and describe the consultation process pursuant to Section 106 of the NHPA. Information about historic resources and project effects that is developed as part of the Section 106 process will be included in the EIS, satisfying the National Environmental Policy Act (NEPA) requirement that the effects of federal actions on the environment be considered.

The project area is in the City of Chicago and the Village of Calumet Park in Cook County, Illinois. The RLE Project would extend the Red Line from the 95th Street Terminal to the vicinity of 130th Street, subject to the availability of funding. Four alternatives are being considered: the No Build Alternative, the Bus Rapid Transit (BRT) Alternative, the Union Pacific Railroad (UPRR) Rail Alternative, and the Halsted Rail Alternative. Analysis presented in this document is confined to the APE, the geographic area where a project may directly or indirectly change the character or use of historic properties.

1.2 Identification of Archaeological Resources

Cultural resource specialists conducted a records search to identify archaeological sites within the vicinity of the project area. Eight prehistoric Native American sites have been recorded within 0.6 mile of the project area. All eight fall outside of the RLE APE. The undertaking will produce no effect on these known resources. Additional archaeological sites may remain undiscovered within the RLE Project footprint; within areas of ground disturbance for the preferred alternative, archaeological investigations would occur prior to construction.

1.3 Identification of Architectural Resources

The cultural resource specialists evaluated 541 properties within the APE and determined that 15 historic resources are eligible for inclusion on the National Register of Historic Places (NRHP).

This includes 13 individual buildings plus two historic districts. No previously listed NRHP properties or districts lie within the APE.

The following resources were identified as NRHP eligible. Maps in Appendix A show the locations of these resources in relation to the alternatives considered:

- 1930 Eclectic Neo-Traditional Home at 444 W. 100th Place (Washington Heights)
- 1920 Classical Revival Substation at 10227 S. Halsted Street (Washington Heights)
- Green Street Historic District (Washington Heights/Morgan Park)
- 1917 Chicago Fire Department Engine Co. 93 at 324 W. 104th Street (Roseland)
- 1911 Roseland Pumping Station at 351 W. 104th Street (Roseland)
- 1928 French Eclectic Home at 11310 S. Emerald Avenue (Roseland)
- 1916 Romanesque Revival Church at 10920 S. Princeton Avenue (Roseland)
- 1934 Bethany Reformed Church Manse at 3 W. 111th Place (Roseland)
- 1930s Roseland Community Hospital Nurses Home at 11321 S. Wentworth Avenue (Roseland)
- 1931 Galloy & Van Etten Stone Contractors at 11756 S. Halsted Avenue (West Pullman)
- 1897–1911 Fire Department Engine Co. 115 at 931 W. 120th Street (West Pullman)
- 1958 S.S. Peter & Paul Catholic Church at 12433–12439 S. Halsted Street (West Pullman)
- 1925 former Venetian Hall at 133–139 E. Kensington Avenue (West Pullman)
- 1923 Romanesque Revival Gatehouse and Entryway to Cedar Park Cemetery at 12540 S. Halsted Street (Calumet Park)
- Altgeld Gardens Housing Project (Riverdale)

1.4 Project Effects

Neither the BRT nor the UPRR Rail Alternative would result in adverse effects on historic resources; however, the Halsted Rail Alternative would result in adverse effects on four historic resources: the Classical Revival substation at 10227 S. Halsted Street, the church at 12433–12439 S. Halsted Street, the fire station at 931 W. 120th Street, and the Cedar Park Cemetery gatehouse and entryway at 12540 S. Halsted Street. Although none of these structures would be physically demolished, the scale and proximity of the construction are anticipated to have an adverse effect on the characteristics that qualify each resource as eligible for NRHP listing.

1.5 Mitigation Recommendations

Due to the scale and proximity of construction for the Halsted Rail Alternative, it is unlikely that the anticipated adverse effects on these resources could be resolved; however, consultation with the State Historic Preservation Office (SHPO) and other interested parties may identify measures to mitigate effects. These measures may include but would not be limited to structural documentation, interpretative signage, further study to identify noise mitigation options for the church, or special provisions regarding construction in the vicinity.

1.6 2014-2015 Red Line Extension Project Update

In August 2014, based on the technical analysis and public input until then, CTA announced the NEPA Preferred Alternative—the UPRR Rail Alternative. CTA is considering two alignment (route) options of this alternative: the East Option and the West Option. At this time, CTA is also considering only the South Station Option of the 130th Street Station. In late 2014 and early 2015, CTA conducted additional engineering on the East and West Options to refine the East and West Option alignments. Appendix E of this technical memorandum summarizes the refined alignments and any additional or different impacts that would result. The information in Appendix E supersedes information presented in other chapters of this technical memorandum. (Updated July 29, 2015)

Section 2

Project Description

The CTA is proposing to extend the Red Line from the existing 95th Street Terminal to the vicinity of 130th Street, subject to the availability of funding. The proposed RLE would include four stations. Each station would include bus transfer and parking facilities. This project is one part of the Red Ahead Program to extend and enhance the entire Red Line. The CTA is also planning 95th Street Terminal improvements that are anticipated to be completed prior to the proposed RLE construction.

The project area is 11 miles south of the Chicago central business district (commonly referred to as the Loop) and encompasses approximately 20 square miles. The boundaries of the project area are 95th Street on the north, Ashland Avenue on the west, Stony Island Avenue on the east, and the Calumet-Sag Channel/Little Calumet River and 134th Street on the south. The I-57 Expressway and I-94 Bishop Ford Freeway cross the western and eastern edges of the project area, respectively. Lake Calumet is in the eastern portion of the project area. The project area encompasses parts of nine community areas in the City of Chicago and the eastern section of the Village of Calumet Park. Chicago community areas include Beverly, Washington Heights, Roseland, Morgan Park, Pullman, West Pullman, Riverdale, Hegewisch, and South Deering. The project area comprises residential (primarily single-family), industrial (both existing and vacant), transportation (including freight), and commercial development.

The Draft EIS focuses on the following alternatives (shown in Figure 2-1), which emerged from the Alternatives Analysis and the NEPA scoping process:

- No Build Alternative
- BRT Alternative
- UPRR Rail Alternative
 - Right-of-Way (ROW) Option
 - East Option
 - West Option
- Halsted Rail Alternative

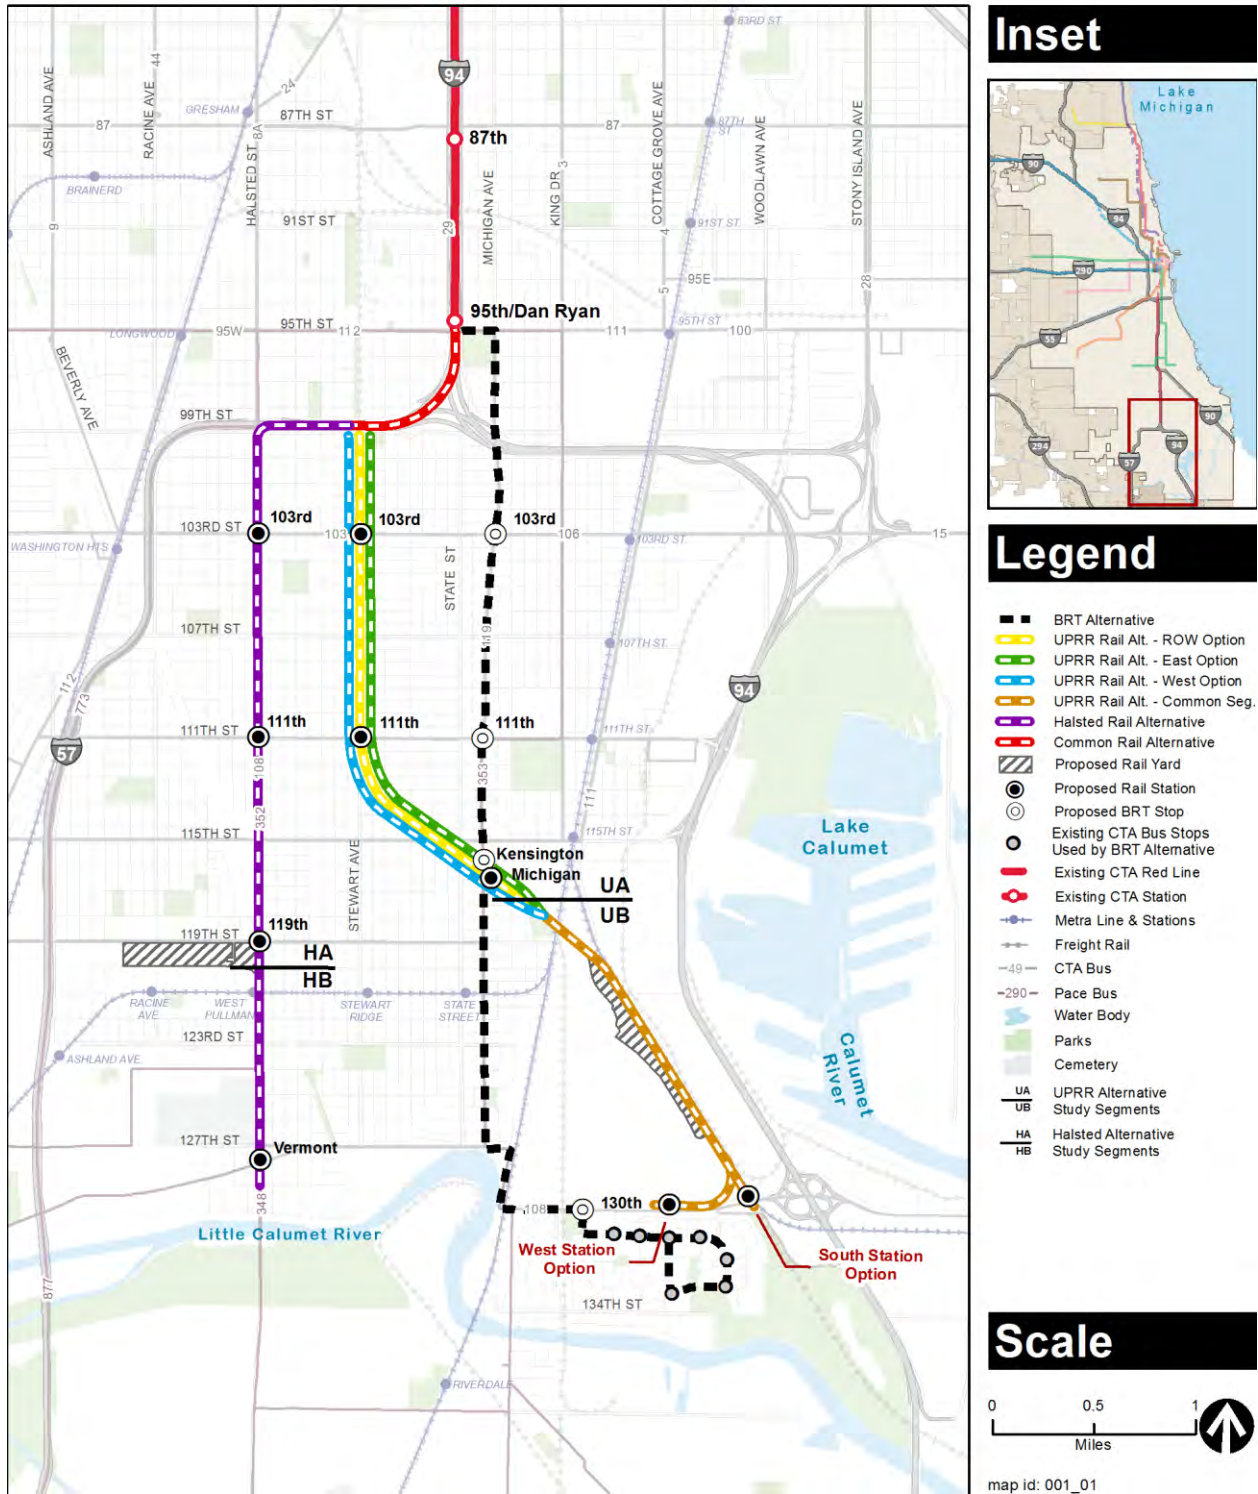

Figure 2-1: RLE Project Alternatives

The No Build Alternative is a required alternative as part of the NEPA environmental analysis and is used for comparison purposes to assess the relative benefits and impacts of extending the Red Line. The No Build Alternative is carried into the Draft EIS phase of project development regardless of its performance versus the build alternatives under consideration. No new infrastructure would be constructed as part of the No Build Alternative other than committed transportation improvements that are already in the Chicago Metropolitan Agency for Planning Fiscal Year 2010–2015 Transportation Improvement Program, including the improvements to 95th Street Terminal. The Transportation Improvement Program projects within the project area consist of four bridge reconstructions, several road improvement projects including resurfacing and coordination of signal timing on 95th Street, work on Metra's facilities, construction of a bicycle/pedestrian multi-use trail, and preservation of historic facilities. The No Build Alternative includes regular maintenance of existing track and structures, and bus transit service would be focused on the preservation of existing services and projects. All elements of the No Build Alternative are included in each of the other alternatives. Under this alternative, travel times would not improve from existing conditions.

The BRT Alternative (formerly referred to as the Transportation Systems Management Alternative) is a 5.0-mile, limited-stop, enhanced BRT route, which is assumed to operate 24 hours per day along Michigan Avenue between the existing 95th Street Terminal and the intersection of 130th Street and Eberhart Avenue. No dedicated bus lanes would be provided for the BRT Alternative due to the limited existing lane capacity along the alignment; however, parking lanes would be removed for some portions of the alignment and four stops with improved bus shelters and park & ride facilities would be created at 103rd Street and Michigan Avenue, 111th Street and Michigan Avenue, Kensington Avenue and Michigan Avenue, and 130th Street and Eberhart Avenue. Although BRT service elements would not continue south of the 130th Street stop, the bus route would continue through Altgeld Gardens public housing project along the existing route with six stops. The BRT Alternative would be consistent with bus routing changes that may occur as part of improvements to the 95th Street Terminal. Under this alternative, travel times between 130th Street and the Loop would improve over existing conditions.

The UPRR Rail Alternative is a 5.3-mile extension of the heavy rail transit Red Line from its existing 95th Street Terminal to 130th Street, just west of I-94. The Chicago Transit Board designated the UPRR Rail Alternative as the Locally Preferred Alternative at its August 12, 2009 board meeting. This alternative includes construction and operation of new heavy rail transit tracks, mostly in existing transportation corridors. The UPRR Rail Alternative has three options for alignment (ROW, East, and West), all of which would include operation on elevated structure from 95th Street to just past the Canadian National/Metra Electric District tracks near 119th Street. The alignment would then transition to at-grade through an industrial area with no public through streets, terminating at 130th Street in the vicinity of Altgeld Gardens. Four new stations would be constructed at 103rd Street, 111th Street, Michigan Avenue, and 130th Street. The 130th Street station would be the terminal station, with two options under evaluation: the South Station Option and the West Station Option. A new yard and shop facility would be sited near 120th Street and Cottage Grove Avenue. The bus routes in the vicinity of the UPRR Rail Alternative would be modified to enhance connectivity between the Red Line and the bus network. The hours

of operation and service frequency for the UPRR Rail Alternative are assumed to be the same as for the current Red Line. Under this alternative, travel times between 130th Street and the Loop would improve substantially over existing conditions.

The Halsted Rail Alternative is a 5.0-mile heavy rail transit extension of the existing Red Line. In this alternative, the Red Line would operate on an elevated structure running south from 95th Street along I-57 to Halsted Street. The alignment would then turn south and continue along Halsted Street to the intersection of Halsted Street and Vermont Avenue near 127th Street. This alternative would include four new stations at 103rd Street, 111th Street, 119th Street, and Vermont Avenue. The Vermont Avenue station would be the terminal station. A new yard and shop would be sited west of Halsted Street and between the 119th Street and Vermont Avenue stations. The bus routes in the vicinity of the Halsted Rail Alternative would be modified to enhance connectivity to the Red Line. The hours of operation and service frequency for the Halsted Rail Alternative are assumed to be the same as for the current Red Line at the 95th Street Terminal. Under this alternative, travel times between 127th Street and the Loop would improve substantially over existing conditions. This alternative would not extend rail to the Altgeld Gardens public housing project, which would be served by bus connecting to the Vermont terminal station.

Section 3

Methods for Effect Evaluation

3.1 Regulatory Framework

This section discusses the applicable federal and state regulations that define archaeological resources and historic properties and provide thresholds for determining effects on the archaeological resources and historic properties.

3.1.1 Federal

Among the federal laws and regulations that address the protection of archaeological resources and historic properties are the NHPA, NEPA, and the Department of Transportation Act of 1966. These laws and regulations resulted from the recognition that historic resources provide valuable opportunities to study human behavior and to plan for the future while conserving and protecting these resources and environments.

Methods employed during the archaeological and architectural investigations associated with the RLE Project were conducted in accordance with the applicable federal laws and regulations as well as with the Secretary of the Interior's *Standards and Guidelines*.

3.1.1.1 National Historic Preservation Act of 1966, as Amended

Undertakings permitted, licensed, approved, or funded, in whole or in part, by a federal agency are required to comply with Section 106 of the NHPA (Public Law 89-665; 16 United States Code [USC] 470 et seq.). The NHPA set up a national framework for historic preservation, requiring the federal government to establish a national system for identifying, evaluating, protecting, and rehabilitating historic places. The act appropriated funds to conduct surveys and planning in each state (Section 101), called for the establishment of the NRHP (Section 101), requires federal agencies to consider archaeological resources and historic properties when undertakings are planned (Section 106), and established the Advisory Council on Historic Preservation (Section 201).

The Section 106 consultation process covers four distinct coordination points that apply to specific projects:

1. Initiation of the process, in which consulting parties (including the SHPO and appropriate Tribal Historic Preservation Offices [THPOs]) are invited to participate in the process
2. Identification of historic properties, in which the APE is established and a reasonable and good faith effort is undertaken to identify historic properties within the APE and evaluate their significance
3. Assessment of adverse effects, in which effects from the project are examined to determine whether they may alter the integrity of historic properties

4. Resolution of adverse effects, in which the SHPO, THPO, and other parties consult to develop measures to avoid, minimize, or mitigate adverse effects on historic resources

To guide the selection of properties included in the NRHP, the National Park Service developed Criteria for Evaluation (36 Code of Federal Regulations [CFR] 60.4). The quality of significance in American history, architecture, archaeology, engineering, or culture may be present in districts, sites, buildings, structures, or objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association with one or more of the following criteria:

- A. Events that have made a significant contribution to the broad patterns of American history on a local, state, and/or national level
- B. Lives of persons significant in the history of the city, state, and/or the United States
- C. Distinctive characteristics of a type, period, or method of construction, or the work of a master, or high artistic values, or a significant and distinguishable entity whose components may lack individual distinction
- D. Information important in prehistory or history

Subpart B of the regulations for the NHPA (36 CFR 800.5) defines the assessment of adverse effects on archaeological resources and historic properties: "an adverse effect is found when an undertaking may alter, directly or indirectly, any of the characteristics of a historic property that qualify the property for inclusion in the National Register in a manner that would diminish the integrity of the property's location, design, setting, materials, workmanship, feeling, or association...Adverse effects may include reasonably foreseeable effects caused by the undertaking that may occur later in time, be farther removed in distance or be cumulative" (36 CFR 800.5.a.1). A finding of "no adverse effect" can be made when the undertaking's effects would not meet this Criteria of Adverse Effect or when the undertaking would be modified to avoid adverse effects (36 CFR 800.5.b).

An analysis of archaeological and historic resources undertaken for the RLE Project is documented in this technical memorandum and will be summarized in the EIS. This analysis satisfies the requirements of NEPA.

3.1.1.2 National Environmental Policy Act of 1969

NEPA (Public Law 91-190; 42 USC 4321-4347) requires federal agencies to evaluate the significance of potential direct and indirect effects on the environment, including effects on archaeological resources and historic properties. Information about historic resources and project effects that is developed as part of the Section 106 process will be included in the EIS, satisfying the requirements of NEPA.

3.1.1.3 Department of Transportation Act of 1966, as Amended

Section 4(f), a special provision of the Department of Transportation Act (Public Law 109-59; 49 USC 303, 23 USC 138; 23 CFR 774), provides substantive protection for archaeological resources and historic properties relating to undertakings on publicly owned land involving the U.S. Department of Transportation agencies. The act establishes a policy that mandates initiation of a special effort to preserve parks, wildlife refuges, and historic sites; consideration of feasible and prudent alternatives; and the implementation of measures to minimize harm. Adversely affected historic properties that would be subject to direct effects have been analyzed in accordance with the requirements of Section 4(f); this analysis is contained in a separate technical memorandum.

3.1.2 State - Illinois

Pertinent state laws, regulations, and guidelines relating to the proposed undertaking include the Human Skeletal Remains Protection Act of 1989 and the Illinois Archaeological and Paleontological Resources Act of 1989. The Illinois State Museum maintains site files for archaeological sites, which are available online to qualified researchers.

Methods employed during the archaeological and architectural investigations associated with the RLE Project were conducted in accordance with the applicable state laws and regulations as well as with the memorandum *Protecting Illinois Cultural Resources: An Introduction to Archaeological Surveys Cultural Resources Guidelines* and the *Survey and Reporting Requirements Addendum* (Illinois Historic Preservation Agency 2010).

3.1.3 Local

The City of Chicago has local historic preservation ordinances, commissions, and designated landmarks. Available data from the city was used to help identify previously listed historic properties. In addition, local government representatives and other local preservation groups were invited to participate in the Section 106 consultation process.

The 2003 Demolition Delay Ordinance establishes a 90-day hold period prior to demolition of historic buildings rated Red or Orange in the Chicago Historic Resources Survey (CHRS), a citywide historic survey completed from 1983 to 1995. These designations represent potentially significant resources at the city or community level, respectively. Although these resources are evaluated independent of the evaluation of NRHP eligibility, they are discussed in this technical memorandum as well.

3.2 Effect Analysis Thresholds

The NHPA establishes qualitative criteria that define whether a historic property would be subject to an adverse effect: when a project “may alter, directly or indirectly, any of the characteristics of a historic property that qualify the property for inclusion in the National Register in a manner that would diminish the integrity of the property’s location, design, setting, materials, workmanship, feeling, or association” (36 CFR 800.5.a). Based on this regulatory framework, an adverse effect finding will be applied to any historic property that would be subject to one or more of the following (36 CFR 800.5.a.2):

- Physical destruction or damage to all or part of the archaeological resource or historic property
- Alteration that is inconsistent with the Secretary of the Interior's *Standards for the Treatment of Historic Properties*
- Removal of the property from its historic location
- Introduction of visual, atmospheric, or audible elements that diminish the integrity of the property's significant features
- Change to the character of the property's use or the physical features within the property's setting that contribute to its significance
- Neglect of a property that causes deterioration
- Transfer, lease, or sale of property out of federal ownership or control without adequate and legally enforceable restrictions or conditions to ensure long-term preservation

If an adverse effect is found, the Federal Transit Administration (FTA) would consult with the Illinois Historic Preservation Agency (the SHPO for Illinois) and other interested parties to develop and evaluate alternatives or modifications to the undertaking that could avoid, minimize, or mitigate adverse effects on the resource (36 CFR 800.6.a).

3.3 Area of Potential Effects

In the context of Section 106, the APE is defined as “the geographic area or areas within which an undertaking may directly or indirectly cause alterations in the character or use of historic properties, if any such properties exist” (36 CFR 800.16.d). The APE for the RLE Project was delineated after considering the location of the proposed alternatives; the potential for ground disturbance, destruction, or property taking; locations from which the undertaking may be visible and/or audible; and the scale and setting of the project. The APE was developed in consultation with CTA, FTA, and the SHPO.

Cultural resource specialists developed the APE boundaries after conducting site visits and reviewing the aerial maps and engineering details (such as alignment locations, elevation of the proposed rail line, expected ROW limits, and the locations of the yards, stations, and parking facilities) for the various alternatives.

Generally, the APE contains those parcels that are within one block of the centerlines for the UPRR Rail and Halsted Rail Alternatives. The APE widens to accommodate the locations of each park & ride and yard and shop beyond the one-block boundary. The APE for the BRT Alternative includes the area immediately surrounding park & ride facilities. Figure 3-1 shows the APE for each alternative corridor.

While the necessary archaeological investigations will occur within the APE, they will be limited only to areas of ground disturbance for the preferred alternative.

3.4 Methods

The Section 106 consultation process includes four distinct coordination points: initiation, identification of properties, assessment of effects, and mitigation of adverse effects. The following subsections summarize how technical analyses will be undertaken to facilitate these four consultation points.

For the RLE Project, “representative sampling” was pursued for the identification of aboveground historic resources. Because of the developed urban environment and linear nature of the project, effects on properties would be similar for adjacent properties. This method is consistent with November 2011 guidance provided by the Advisory Council on Historic Preservation regarding the “Reasonable and Good Faith Identification Standard in Section 106 Review.”

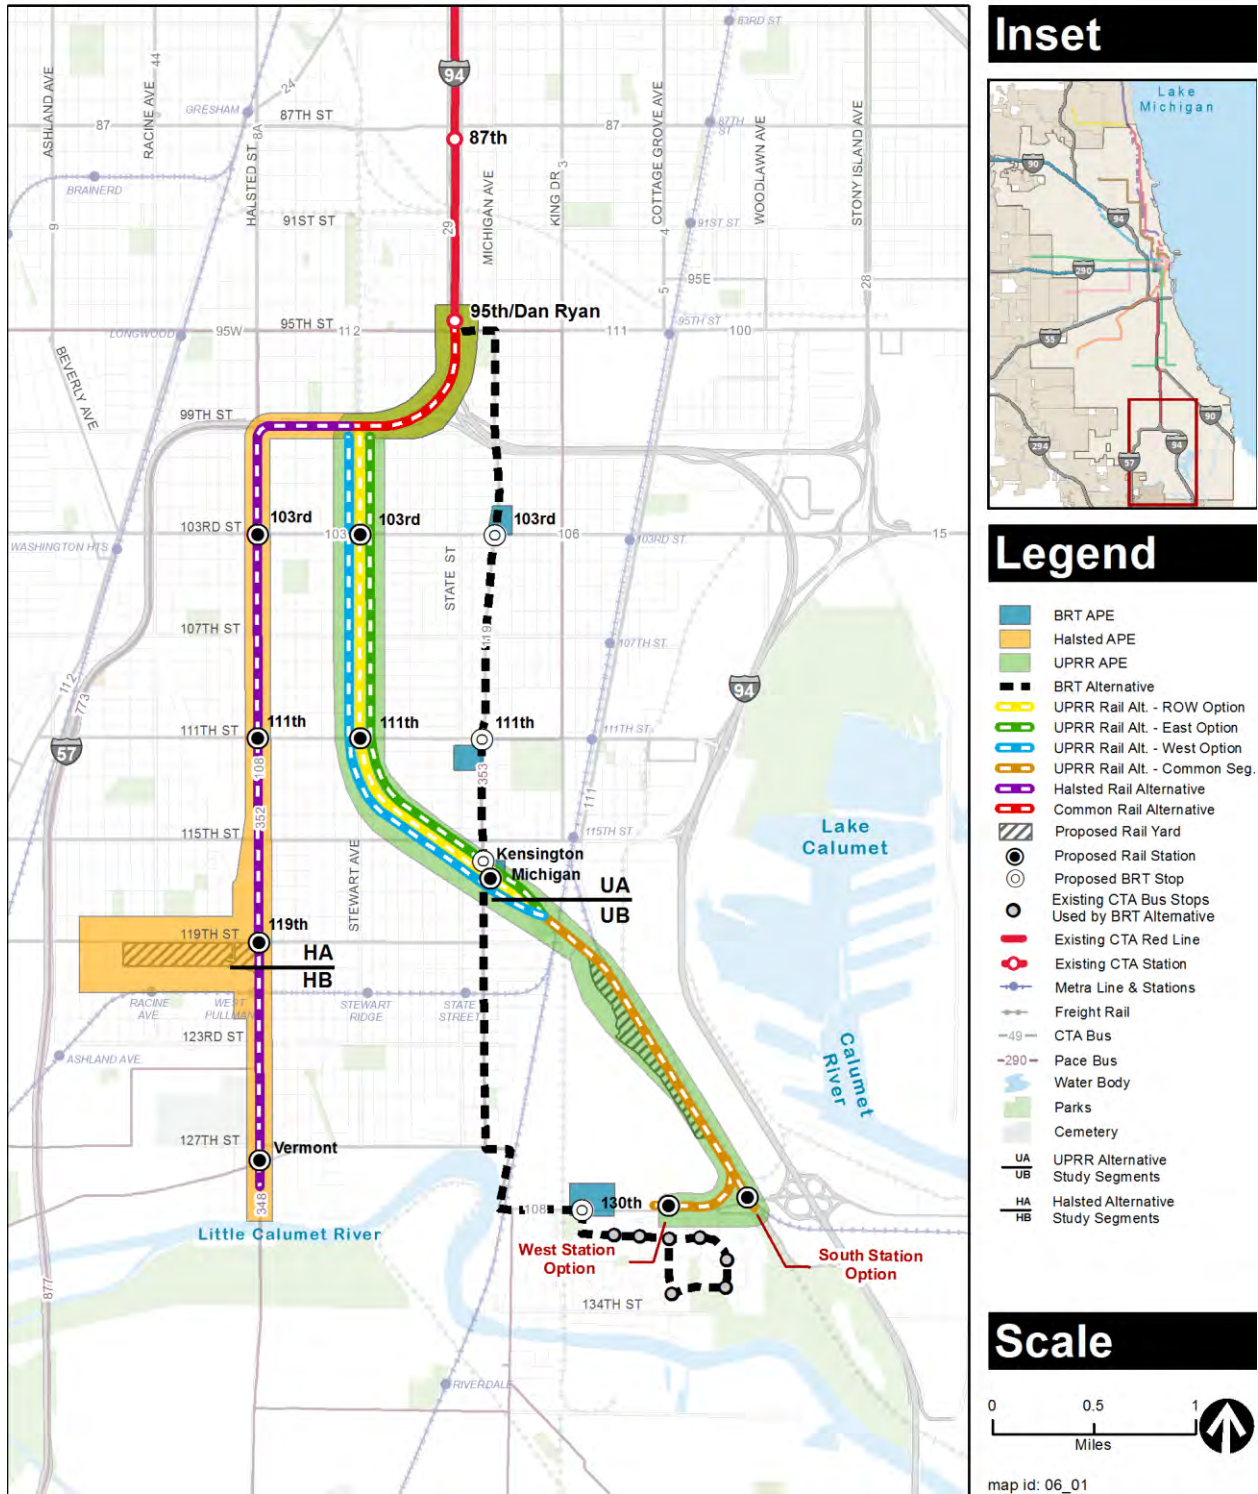

3.4.1 Historic Context and Known Sites

Background research was conducted to describe the historic context for the project area. Understanding the historic context is essential in establishing the significance of individual properties, and by extension, NRHP eligibility for the built environment and any archaeological resources. In addition to reviewing the Historic Architectural Resources Geographic Information System (HARGIS) and city records, the following resources were consulted in developing the historic context:

- Sanborn Fire Insurance maps and other historic maps
- Chicago’s citywide GIS database
- CHRS
- Previous architectural studies in the area
- Other relevant scholarly publications

Using information in HARGIS and the other sources listed above, a list of previously identified historic properties within the RLE APE was compiled and mapped. This effort included the identification of known archaeological sites, NRHP-listed districts and structures, and any properties identified as local landmarks in Chicago.

The delineation of the APE is described in **Section 3.3**. Historic contexts are presented for archaeological resources in **Section 4** and for individual communities in **Section 5**.

3.4.2 Identification of Historic Resources

Following the development of the APE and historic contexts, cultural resources specialists conducted field surveys on two distinct categories of properties: properties that would likely be displaced or demolished as a result of one or more alternatives, and a representative sample of other properties within the APE. The following subsection identifies how the representative sample in the latter category was identified.

For both categories of properties that were surveyed, cultural resource specialists conducted archival research and photo-documented the exterior of each structure from the public ROW. Each property was assessed for NRHP eligibility using the data gathered during the fieldwork and research phases of the investigation. Results of this analysis are described by community in **Section 5**.

Defining the Representative Sample

To determine the properties to be included in the representative sample, the team's architectural historian relied on the GIS database provided by the City of Chicago, the HARGIS database, online mapping resources, SHPO records, and field reconnaissance. Examining the APE block by block, the historic character of each block was considered, including the following:

- What age are the buildings?
- What types of buildings are present?
- What function(s) do they serve?
- What architectural styles are apparent?
- How does the structure fit the context of the larger neighborhood?

In light of the neighborhood and block level contexts, analysts selected one or more properties per block to represent the range of buildings over 50 years in age throughout the area. In areas where the project would likely cause more substantial effects, a greater concentration of sample properties was selected. More sample properties were selected for heterogeneous blocks (e.g., blocks having a mix of property types and ages) than homogenous blocks. Where multiple similar buildings exist within the block, analysts selected the building with the greatest integrity or most distinguishing architectural features.

For example, block A contains only residential buildings, both Craftsman style bungalows and Minimal Traditional brick homes. Structures date to the 1920s and 1930s. The project would cause moderate effects on the adjacent block, but block A would be screened from the transit line by an existing row of buildings. Analysts therefore selected one bungalow and one Minimal Traditional house from this block. Alternatively, Block B contains a mix of residential and commercial properties, dating from 1902 through the 1950s, plus some modern infill. A mix of architectural

styles is present. In this case, analysts selected five structures on this block to represent the cross-section of existing structures.

This process was repeated along the entire APE corridor.

Available Resources for Architectural Research

Architectural datasets for Cook County that were consulted for the RLE Project included the following:

- The **HARGIS database** was created by the Illinois Historic Preservation Agency in 2003 to manage information about Illinois historic properties; this database documents the state's built environment. The HARGIS database includes data gathered as a result of three statewide survey projects: the Illinois Historic Structures Survey, the Illinois Historic Landmarks Survey, and the Illinois Rural Survey (conducted 1970–1987). The HARGIS database also includes properties identified as part of a NRHP nomination, surveys by local preservation groups, and information from the Illinois Department of Transportation's Bridge Survey. The database includes data forms, photographs, background documentation, and spatial information within a geographical context for each historic property and historic district within the dataset.
- The **CHRS** is an inventory of buildings that was compiled during 1983–1995. The Chicago Department of Housing and Economic Development published its findings in a report titled *Chicago Historic Resources Survey: An Inventory of Architecturally and Historically Significant Structures* in 1996. Organized according to Chicago's 77 neighborhoods, the inventory lists over 17,000 architecturally and historically significant buildings and structures that predate 1940. The information is also available online and is searchable by neighborhood, building address, decade of construction, architect's name, building style and type, survey ranking, and landmark status.
- **Sanborn Fire Insurance maps** contain a wealth of information on the built environment in urban areas. Originally created and maintained to assess fire insurance liability, the maps provide dated contexts in which to describe the development of neighborhoods as well as the compositional components and historical use of individual buildings. Data especially useful for this project include the building footprint, number of stories, foundation material, and cladding material. The Sanborn maps are available online through subscription.
- **NRHP nomination forms** for individually listed historic properties and districts provide a wealth of contextual information for the individual properties and the historic districts. They include construction dates for most historic properties discussed therein and identify the architect in most instances.

Architectural datasets at the local level were reviewed as well, including information from the Commission on Chicago Landmarks.

The Commission on Chicago Landmarks recommends individual buildings, sites, objects, or entire districts to the Mayor and City Council for designation as Chicago Landmarks. To be recommended by the Commission for landmark designation, these resources must meet at least two criteria: (1) being valuable as an example of city, state, or national heritage, and (2) being historically significant—the site of a significant historic event, association with a significant person, architecturally significant, the work of a significant architect or designer, association with a significant historic theme, or a having unique visual feature. In addition, the potential landmark must maintain integrity in light of its location, design, setting, materials, workmanship, and ability to express such historic, community, architectural, or aesthetic interest or value. The Commission reviews any proposed alteration, demolition, or new construction affecting individual landmarks or properties in landmark districts as part of the permit review process. The Commission produces two new publications each year, one for individual landmarks and landmark districts and another for Chicago listings on the NRHP.

3.4.3 Effects from the Project

In consultation with FTA, CTA, the SHPO, and other consulting parties, effects were assessed for each resource previously listed on the NRHP and for those determined to be NRHP eligible. Effects were largely drawn from the other technical memos prepared for the RLE Project and were applied to the NRHP-eligible properties to assess how the project may alter the characteristics that qualify properties for inclusion in the NRHP. Because indirect effects (e.g., noise, vibration, and changes in the visual environment) would be similar for individual properties in close proximity along the corridor, effects on potentially historic properties beyond the representative sample set will be evaluated at a district or neighborhood level. Effects on historic resources are discussed in **Section 6**.

In consultation under Section 106, mitigation strategies will be developed to address any adverse effect determinations. As appropriate, a Memorandum of Agreement will be developed in consultation with FTA, CTA, and Section 106 consulting parties. Mitigation measures are discussed in **Section 7**.

3.4.4 Consultation

As required by Section 106 of the NHPA, consultation covered four distinct coordination points:

1. Initiation of the process
2. Identification of historic properties
3. Assessment of adverse effects
4. Resolution of adverse effects (developing measures to avoid, minimize, or mitigate adverse effects on historic resources)

Section 8 of this technical memorandum discusses the Section 106 consultation process for the RLE Project.

Section 4

Archaeological Resources

This chapter presents an overview of the prehistoric development of the area and an overview of archaeological discoveries in the vicinity. Eight prehistoric Native American sites have been recorded within 0.6 mile of the project area; no known sites fall within the project footprint or the APE itself. Although the landscape through which the transit lines would pass is developed, additional archaeological sites may remain undiscovered within protected locations such as parks and gardens.

4.1 Prehistoric Context

This section briefly describes the natural landscape features that influenced the prehistoric development of the area, followed by a description of the prehistoric context for the Paleoindian, Archaic, Woodland, Mississippian, Proto-Historic, and Historic Periods.

Although humans probably entered North America from Asia at least 20,000 years ago, solid evidence for their presence in the Midwest before 10,000 B.C. is elusive. From the time of the initial arrival until the arrival of the Europeans in the 17th century, the archaeological record shows evidence for continuous population growth and changing social adaptations to new developments in both the natural and cultural landscape.

The following description of the cultural landscape in northeastern Illinois will serve as a framework for assessing the significance of the archaeological remains within the APE (adapted and updated from Bird and Tolmie 2000). The recorded sites represent only a small percentage of the prehistoric cultural resources in the Chicago area, as substantial numbers of sites have been destroyed by urban development or were found by amateur archaeologists or relic collectors but have not been reported. Other sites remain undiscovered on unsurveyed land.

4.1.1 Natural Landscape

The RLE Project would be wholly contained within the exceptionally flat, crescent-shaped Chicago Lake Plain. The approximately 45-mile by 15-mile plain occupies the exposed floor of glacial Lake Chicago. Relief within the lake plain varies only 10 feet above the former lake floor where sand spits, dunes, and beaches formed near the shoreline during one of three high water stages of Lake Chicago, when water levels reached 600–620 feet: Glenwood Stage, Calumet Stage, and Tolleston Stage.

The project area includes lake plain-associated surface features such as Calumet Stage beach ridges, the Washington Heights Spit, and the Stewart Ridge Spit (Bretz 1939:105, 108, Plate 1).

Philip C. Hanson (1981), then with the Field Museum of Natural History, used the General Land Office survey notes and plats to reconstruct pre-settlement vegetation in the Chicago Lake Plain. Hanson's analysis (1981:160) identified nine plant communities within the lake plain, with wet

prairie, prairie, and oak savanna plant communities mapped along the RLE corridor. The savanna community, dominated by black oak and bur oak, is associated with the sandy beach ridges and spits in the “Calumet area” at the southern end of the lake plain (Hanson 1981:161). The beach ridges and spits provided dry, elevated landforms suitable for habitation sites and for travel by land. The wet prairie community is mapped south of the “Old Indian Reservation Boundary” line shown on the U.S. Geological Survey quadrangles, between the Little Calumet River to the south and Lake Calumet to the north. Hanson (1981) mapped prairie north of the boundary line. Surface water drains into Lake Michigan by way of the Little Calumet, Calumet, and Grand Calumet rivers, unless artificially diverted into the Calumet-Saganashkee Canal.

4.1.2 Paleoindian Period (10,000 to 8,000 B.C.)

During the Paleoindian Period, populations across the Midwest were highly mobile bands of hunters and gatherers occupying large territories. The Paleoindians hunted a variety of mammals including the now extinct mammoth and mastodon, elk, and deer, and gathered locally available plants. Sites within the Chicago area dating to the Paleoindian Period are rare, although individual tools are more common. The stone tools most often associated with this period, fluted projectile points and knives, are occasionally recovered as isolated finds in upland areas and along the margins of large river valleys and ancient lake beds. Many archaeological sites in the Chicago Lake Plain dating to the Paleoindian Period have been either destroyed by erosional processes or buried by natural deposition.

Very little is known regarding the actual distribution, subsistence pattern, and social organization of the Paleoindians. Within recent years three sites in northeastern Illinois dating to this period and/or a late Paleoindian/Early Archaic transitional period have been investigated. Fluted points and preforms, along with other tools diagnostic of early Paleoindian technology, have been recovered from Hawk’s Nest (11-L-344) during archaeological investigations (Loebel, Amick, and Lurie 2000). The Gainey Phase Hawk’s Nest site in Lake County is one of the few extensively studied early Paleoindian sites in northeastern Illinois. Repeated surface collections and limited excavations at the 11,000-year-old site have yielded close to 200 chipped stone tools, including fluted point preforms, end and sidescrapers, and graters, along with manufacturing debris from raw materials obtained up to 350 miles away. The size of the assemblage and its distinctive content suggest a place that was repeatedly being used as a transient camp during extended hunting forays (perhaps seasonal) in the Upper Illinois and Lake Michigan basins (Amick et al. 2000).

The multi-component Garrison Site (11-L-337), on Lake Border Moraine till along a linear slough now carrying the North Branch of the Chicago River, contains an ephemeral late Paleoindian component that has not been disturbed by plowing. MARS, Inc. conducted Phase II testing and Phase III data recovery at Garrison over three field seasons (Lurie et al. 1993, Demel 2000). Floral and faunal analyses suggest a late summer through fall and possibly winter occupation of the site with a focus on plant and/or nut processing (Demel 2000:403).

Archaeologists from Northwestern University recovered late Paleoindian/Early Archaic diagnostic lithics during Phase II investigations at Plenemuk Mound (11-Wi-241). Plenemuk Mound is a 5.6-acre site with a buried Archaic component and an Upper Mississippian component including a probable Langford Tradition Upper Mississippian burial mound (estimated at about 3 feet high and 50 feet in diameter) associated with the 11-Wi-280 habitation site to the east (Bird 1997:321). The scatter of artifacts along a high terrace (valley train remnant) above the Kankakee River is most likely associated with a seasonally occupied late Paleoindian/Early Archaic base camp (Doershuk 1988:143). Late prehistoric people disturbed the earlier Paleoindian/Early Archaic occupation during the subsequent erection of a burial mound.

Recent research into the poorly defined Chesrow Complex of far southeastern Wisconsin has uncovered important information bearing on mammoth and mastodon exploitation (Overstreet 1993). Although radiocarbon dates from bone collagen and preserved spruce suggest that the megafauna were exploited by Paleoindians, no temporally diagnostic tools have been recovered in association with the remains and the integrity of some sites is questioned (Mason 1997:97).

4.1.3 Archaic Period (8,000 to 1,500 B.C.)

The long Archaic Period was a time of transition in the Midwest. After the final retreat of the glaciers, subsistence pursuits adjusted to the changing natural environment as deciduous forests replaced coniferous forests and as the prairie expanded to the east. Human population densities gradually increased, mobility decreased, resource exploitation and technology became more diverse and localized, and social organization became more complex.

During the Archaic Period, hunting began to focus on deer as the primary source of meat. A variety of smaller animals and fish were also collected, with increased emphasis on aquatic resources throughout the period. Plant foods including tubers, nuts, and seeds became increasingly important for subsistence. Some native plants, such as goosefoot, sumpweed, and possibly native squash or gourd, may have been domesticated during the latter part of the Archaic. Domesticated dog has been identified at archaeological sites in the Midwestern United States.

New tool types were developed, including new forms of spear or projectile points, the chipped stone adze, ground stone tools, copper tools, stone mortars for processing plants, and ornaments from bone, shell, and copper. The first cemeteries in Illinois appear during the Middle Archaic and late in this period; graves were occasionally covered with low mounds of earth. Toward the end of the Archaic Period, groups had established particular territories within which settlements were shifted to exploit the seasonally available natural resources. Networks for the exchange of resources within and between regions also developed toward the end of the Archaic.

Although many archaeological sites date within the long Archaic Period, few have been extensively excavated in the Upper Illinois drainage. Until recently, very little was known about the nature of subsistence practices, social organization, or the processes of cultural change and stability during the Archaic (Lurie et al. 2009). Demel (2000:482) posits that sites affiliated with Early Archaic and early Middle Archaic periods have been inundated under the waters of Lake

Michigan. Groups taking advantage of coastal resources would have established extraction camps and villages along the now inundated shoreline of glacial Lake Chippewa.

McGraw Farm (11-L-386) mortuary and habitation site, located on a prominent glacial kame overlooking the Fox River, was mitigated in 1996 (Porubcan et al. 1998). Formal burial features on the site were grouped into two sets, with Middle to late Middle Archaic burials (dated 3,630 to 3,350 B.C.) densely concentrated near the ridge crest. Multiple mortuary treatments including primary burial, cremation, and bundle reburial were represented, and no selection of treatment type based upon age or sex was apparent. Non-burial features contained moderate amounts of lithic debris, tool fragments, and carbonized plant and animal remains.

In 2001 and 2002 MARS, Inc. tested and mitigated the Chen site (11-Wi-2514), an unplowed Late Archaic Period campsite on a northwest-facing bluff slope above the DuPage River (Lurie et al. 2002). The excavations yielded over 2,700 artifacts including two Late Archaic Period projectile points or knives; geomorphological investigations confirmed the undisturbed nature of the deposits. Site location and analysis of chipped stone tools and debris suggest that the Chen site probably functioned as a spring, summer, or fall habitation where general activities linked to resource extraction from the nearby DuPage River floodplain and upland margin areas were conducted. Substantial amounts of lithic debris indicate that tool manufacture and maintenance were frequently conducted on site.

A nutshell, recovered in association with a Matanzas point in feature context at the Garrison site, was dated by calibrated radiocarbon assay at 3,363 B.C. Demel (2000:479) suggests that the site was most densely occupied during the Early Archaic and the late Middle Archaic/early Late Woodland as a residential camp where plant processing was an important activity.

4.1.4 Woodland Period (1,500 B.C. to A.D. 1,000)

The onset of the Woodland Period is traditionally marked by the introduction of pottery technology; however, in the southern Midwest pottery was manufactured as early as 2,500 B.C., well within the Late Archaic. This early pottery, such as Black Sand and Marion, tends to be thick and porous, with fiber or coarse grit temper. Gillette (1949:64) notes that Marion Thick sherds and Adena points have been found at the Fisher site (11-Wi-5) near the mouth of the Illinois River. Slaymaker and Slaymaker (1971:192) report “typical” Early Woodland pottery from surface collections at Knoll Spring (11-Ck-19) on Calumet Stage beach deposits overlooking the Sag Valley. The available information suggests, therefore, that both Black Sand and Marion ceramics have been recovered within Early Woodland Period sites in northeastern Illinois.

Early Woodland patterns of settlement, subsistence, and social organization were probably not very different from those of the Late Archaic. Hunting and fishing remained focal subsistence activities. While nuts continued to be an important food item, seeds were increasingly important, although plant cultivation did not account for the bulk of subsistence calories. Sunflower may have been added to the list of domesticated plants at this time. Data from the Lower Illinois Valley and the Mississippi River in Illinois suggest that Early Woodland groups focused on river bottom resources during at least part of the year. Early Woodland sites are identified by the

occurrence of the first pottery vessels, by particular forms of projectile points and other stone tools, and by the construction of substantial earthen burial mounds.

Charles Faulkner (1960:43-44) noted an early expression of the Early Woodland, contemporaneous with the Red Ochre Culture, at a small number of sites within the sand ridges of the lake plain surrounding the head of Lake Michigan. Red Ochre is now widely recognized to fall mainly within the Early Woodland Period, although ceramics are absent in the complex (Brown 1986:605).

During the Middle Woodland Period, settlements in the Midwest tended to concentrate along broad river valleys. Burials were placed in mounds on nearby bluffs, possibly serving as territorial markers. Sites were occupied for longer periods of time during the year and by greater numbers of people than in preceding periods. Subsistence activities focused on harvesting the abundant seed plants of the floodplain as well as on raising some native domesticates. Deer, fish, and a variety of small mammals and birds were also important food resources.

The best-known data on Middle Woodland come from the region of the Ohio, Mississippi, and Illinois Rivers in Ohio and Illinois. Along the lower Illinois River, Middle Woodland settlement systems consisted of a number of functionally differentiated site types including regional centers, base camps, small seasonal camps, and mortuary sites. Exotic and stylized artifacts called Hopewell have been found in both mortuary and habitation contexts throughout the Midwest during the period. They suggest a widespread social and economic network that stretched as far west as the Rocky Mountains, north to Lake Superior, south to the Gulf of Mexico, and east to the southern Appalachians. Middle Woodland can be recognized by diagnostic pottery vessel decoration, projectile point types, exotic artifacts, large burial mounds, complexes of earthworks, and other remains. Site 11-Ck-250 includes Middle Woodland artifacts (e.g., corner-notched projectile points, scrapers, and grit-tempered sherds) within the Oscar Biedes collection. Weaver ceramics in association with Steuben points, diagnostic of the transition from Middle Woodland to Late Woodland, have been recovered from two radiocarbon-dated sites in northeastern Illinois (11-Wi-684 and 11-Mh-125) excavated by Kullen (1995) and Lurie and Johnson (1996), respectively. The sites are confidently placed within the Steuben Phase (circa A.D. 200 to 419) as defined by Wolfarth (1995).

During the late Middle Woodland and early Late Woodland, the trade of long-distance materials came to an end. Mortuary activities became less complex, and settlement patterns changed. There appears to have been a radical reorganization of social and economic systems in the Midwest, the impetus for which is currently unclear. Throughout the region, Late Woodland appears to have been a period of population growth and expansion with settlements no longer restricted to broad alluvial river valleys. Late Woodland sites are found in a variety of topographic settings, sometimes in the same locations as earlier Archaic sites. The hierarchy of sites present during the Middle Woodland disappeared and Late Woodland settlement systems apparently consisted of small seasonal villages and associated support camps.

Although subsistence continued to be based on hunting, fishing, and the gathering of plants, corn horticulture began to be increasingly important in the economy. The quantity and diversity of seeds recovered from Late Woodland period sites indicate extensive use of this resource in the subsistence strategy.

Burials continued to be placed in mounds. Some Late Woodland mounds were constructed in the form of animal effigies in southern Wisconsin and northern Illinois. Late Woodland sites can be recognized by the presence of thin-walled, harder, grit-tempered ceramics and new projectile point types, including arrow points. The Late Woodland Period local pattern may be suggested through examination and integration of information encompassing the recent investigations at Hurd (11-L-71) and McGraw Farm (11-L-386), 0.6 mile northeast of Hurd (Bird 1998, Porubcan et al. 1998). Hurd and McGraw are temporally and culturally related sites, perhaps task-specific sites within the Late Woodland seasonal round—one a fall hunting and harvesting encampment, the other a mortuary facility. Flint Creek separates the encampment from the mortuary site. Three Late Woodland burial features have been identified at McGraw; these comprise a minimum burial population of ten individuals. Temporal affiliation was determined using radiocarbon assays, diagnostic artifacts in association with inhumations, and similarity of burial treatment program. Dr. Anne Grauer's analysis (Porubcan et al., 1998: 29) suggests that the Late Woodland burials appear to be primary interments, although the disposition of some of the flexed burials may indicate postmortem processing. The low incidence of infection and anemia compared to contemporaneous burial populations in west-central and southern Illinois suggests to Grauer that the McGraw Late Woodland population was not sedentary; however, equivalent rates of dental caries suggest that the McGraw population had a similar diet, high in carbohydrates and probably related to the consumption of corn.

Calibrated radiocarbon assays from Hurd and McGraw suggest that Hurd is somewhat later than McGraw. Hurd calibrated dates range from A.D. 1180 to 1280 while calibrated dates at McGraw range from A.D. 970 to 1195. Ceramics recovered from two of the features relate the occupation to people who used Starved Rock Collared jars within the territorial region encompassing the Upper Illinois River system and the Middle Rock River. The occupants grew corn and gathered resources from the uplands and floodplain at the confluence of Flint Creek and the Fox River.

Starved Rock and Aztalan Collared vessels are commonly found within sites south of the coniferous/deciduous tension zone in Wisconsin encompassing mixed prairie-oak-hickory woodland and the Prairie Peninsula. Hurley (1975), Fowler and Hall (1978:560), Benn (1979), Hall (1987:66-68), Salkin (1987, 1993), Goldstein (1991:224), Richards (1992:418), Bird (1997), Emerson and Tittlebaum (2010), and Kelly (2002) have presented theories to account for the relationship among various Late Woodland groups in the Midwest. Most researchers agree that the Late Woodland collared-style pottery appears circa 900 to 1000, disappears circa 1100 or 1200, and is replaced by Upper Mississippian ceramics in the region. Based on morphological attributes and paste recipes, Aztalan Collared, Starved Rock Collared, and Upper Mississippian Langford Corded are indistinguishable without rim segments.

Two of the eight sites (11-Ck-244 and 11-Ck-246) recorded near the project area contain artifacts diagnostic of the Late Woodland Period (e.g., grit-tempered sherds and triangular projectile points). Both are situated on a low sand bar associated with glacial Lake Chicago and formed during the Calumet stage of Lake Chicago (Bretz 1939:Plate 1).

4.1.5 Mississippian Period (A.D. 1000 to A.D. 1600) and Proto-Historic Period (A.D. 1600-1673)

Mississippian subsistence relied increasingly on cultivated plants, particularly corn and squash. Beans enter the archaeological record for the first time in the Midwest late in the period. Deer was the most important faunal resource, although migratory waterfowl, elk, bison, fish, and raccoon also contributed to the protein intake.

Two types of Mississippian occupations have been identified in Illinois: Middle Mississippian and Upper Mississippian. Middle Mississippian sites tend to occur along rivers with wide, fertile floodplains and reliance on cultivated plants appears to have been substantial. Upper Mississippian sites, on the other hand, tend to occur along rivers extending into the Prairie Peninsula, where reliance on cultivation may have been less intense than for Middle Mississippian populations.

Middle Mississippian peoples achieved the greatest level of cultural complexity in the prehistory of the United States. The river valleys were densely occupied and the settlement systems included permanent towns surrounded by smaller villages and farmsteads. In the Greater St. Louis area of Illinois and Missouri, this Mississippian development may have reached urban proportions. Exchange networks and new systems of political control extended throughout much of the eastern United States. Middle Mississippian sites can be recognized by their diagnostic substructure mounds, house forms, pottery styles, and stone hoes. Although major Middle Mississippian sites are found in the southern part of the state, there is little evidence of Middle Mississippian occupation in northeastern Illinois.

Upper Mississippian peoples were probably more dispersed across the landscape than Middle Mississippian peoples, and apparently lived in smaller villages and farmsteads. In northeastern Illinois, Upper Mississippian occupations known as Fisher/Oneota and Langford are well documented and can be recognized primarily by their distinctive ceramics. The Sanctuary Golf Course in New Lenox in Will County, Illinois near the confluence of Marley and Hickory Creeks contains the remnants of a number of archaeological sites including 11-Wi-654, a 7.0-acre single component Langford Tradition habitation (circa A.D. 1110 and 1426), and 11-Wi-213, an 18.5-acre multi-component habitation (circa A.D. 1165 through 1644). The analysis of ceramics from these sites focused on separating site components, defining temporal trends, and examining regional interaction (Bird 1997). The analysis illuminated temporal, spatial, and social trends involving late prehistoric and proto-historic group interaction at the head of Lake Michigan (Bird 1999, 2010). Important Oneota sites within the Chicago Lake Plain include Huber (11-Ck-1), Hoxie (11-Ck-4) and Oak Forest (11-Ck-53). All three were situated to utilize the resources along the edge of the lake plain. Huber is 6.9 miles west of the confluence of Tinley Creek and the Sag. Hoxie is 7.1

miles south-southeast of Thorn Creek, south of the Little Calumet River. Oak Forest is 4.9 miles south of the interface between the morainal uplands and the lake plain.

Two of the eight sites (11-Ck-28 and 11-Ck-284) recorded near the RLE Project contain artifacts diagnostic of the Mississippian or Proto-Historic periods. The shell-tempered sherds recovered by Bluhm and Wenner from ridges adjacent to a slough at 11-Ck-28 suggest a Fisher/Oneota occupation for the site. Lace and Nowicki reported the Joe Louis site (11-Ck-284) above the south bank of the Little Calumet River near a spring. Artifacts included fauna, lithics, and late Fisher Phase shell-tempered ceramics (primarily), some from feature context (including superimposed pits). Subsequent survey and testing of this substantial habitation site further defined the site limits and concentrations of materials within the site.

4.1.6 Historic Period (1673 to Present)

Historic Indian tribes known to have inhabited northeastern Illinois during this time include Fox (Mesquakie), Kickapoo, Mascouten, Menominee, Miami, Ojibwa (Chippewa), Ottawa (Odawa), Potawatomi, Winnebago (Ho-Chunk), and Sauk (Tanner 1987:93, 98, 106, 140). The Potawatomi were firmly established in the vicinity when the settlers arrived following the Black Hawk War of 1832. Portage points and river junctures along the waterways were important locations for Native American encampments and villages as well as Euro-American trading posts, towns, and forts.

Trails around the head of Lake Michigan (Calumet Region) skirted the lakeshore or used beach ridges to cross the Chicago Lake Plain. The 1819 General Land Office plat notes an “Indian Trail” passing along the western shore of Lake Calumet. The Bishop Ford Freeway and Cottage Grove Avenue follow the approximate alignment of the old trail within the project area. Outside the project area, the trail continues to the southeast aligned with State Street through Calumet City. The “Indian Trail” joined Scharf’s Trail P, a branch of the historic Chicago-Vincennes Trace (Quaife 1923:51-71), at about Kensington (near the center of Section 22). James Rees’ 1851 map and Albert Scharf’s 1901 map of *Indian Trails and Villages of Chicago* (1901) show Trail P crossing the Little Calumet River at the toll bridge established by George Dolton and Levi Osterhoudt in 1842 at Riverdale Crossing, which aligns with Indiana Avenue and Vincennes Avenue. The General Land Office “Indian Trail” and Trail P are branches of the Chicago-Vincennes Trace.

Railroads followed the same general alignments as the early trails, around the head of the lake from the eastern states into Chicago. The Illinois Central appears on the 1870 plat of Calumet Township and aligns with Trail P while the Michigan Central Railroad appears on the same plat aligned with the “Indian Trail.” The rail lines, like the trails before them, join at Kensington (Van Vetchen 1870).

Sources of information about the Historic Period include accounts of traders, missionaries, Indian agents, surveyors, military personnel, travelers, and settlers as well as the insights gained from archaeological investigations.

Section 5 discusses the historic development of each of the six neighborhoods and communities along the RLE Project corridor.

4.2 Archaeological Sites in Project Vicinity

Based on artifacts collected by amateur archaeologists Albert Scharf, Oscar Biedes, and Ed Lace, as well as professional investigations completed by the Illinois State Archaeological Survey, eight prehistoric Native American sites have been recorded within 0.6 mile of the RLE Project vicinity, although none fall within the APE. The sites are listed in Table 4-1.

Table 4-1: Archaeological Sites in the Red Line Extension Project Vicinity

Site #	Site Name	Recorded	Archaeologist(s)	Temporal
11-Ck-28	T. Shapas Collection	1957	E. Bluhm, D. Wenner	Middle Woodland Upper Mississippian
11-Ck-177	(Detail No. 38)	1919	A. Scharf	Two mounds, Village
11-Ck-244	Flat Foot Lake South	1987	E. Lace	Late Woodland
11-Ck-245	Flat Foot Lake North	1987	E. Lace	Prehistoric
11-Ck-246	Flat Foot Lake Central	1987	E. Lace	Late Woodland
11-Ck-247	Beaubien Woods	1987	E. Lace	Prehistoric
11-Ck-250	Oscar Biedes Collection	1987	E. Lace	Middle Woodland
11-Ck-284	Joe Louis Site	1986, 2010	E. Lace, ISAS	Upper Mississippian

Source: Illinois State site files

Site 11-Ck-284 is south of the Little Calumet River (0.6 mile southwest of the Halsted Rail Alternative footprint), and sites 11-Ck-28, 11-Ck-177, 11-Ck-244 through 247, and 11-Ck-250 are near Flatfoot Lake within the 135-acre Beaubien Woods Forest Preserve of Cook County (0.6 mile southeast of the UPRR Rail Alternative footprint). Only the Joe Louis site (11-Ck-284) has been reviewed for NRHP eligibility and was determined eligible, independent of the RLE Project.

Elaine Bluhm and David J. Wenner recorded site 11-Ck-28 based on a collection of grit-tempered and shell-tempered ceramics gathered from the site and held by Theodore Shapas. The site dates to the Middle Woodland (grit-tempered sherds) and Upper Mississippian (shell-tempered, Oneota sherds) periods.

Betty Broyles recorded 11-Ck-177 in 1959 as comprising the village (Ckv125 and Ckv126) and associated mounds (Ck-127 and Ck-128) detailed by Chicago tobacconist and avocational archaeologist Albert Scharf in 1919: "Two mounds and a camp site were located along the bend of the river" (Brown 1917). Regarding the Calumet Marshes, Scharf (1919) notes:

"The several Indian villages in these marshes were all located along the canoe routes or portage trails of which they form the route simply passing from one to the other & together we have one of the links of the great highway leading from the Illinois River to the 'Great Lake.'"—Manuscript transcribed and on file at MARS, Inc.

David J. Keene and Theodore J. Karamanski (1980) reported sites 11-Ck-244 through 11-Ck-247 and site 11-Ck-250 in 1979 during survey work completed for the Forest Preserve District of Cook County. Ed Lace, an avocational archaeologist with the Forest Preserve District of Cook County

with whom Keene and Karamanski had worked on the project, formally recorded the Woodland Period and undefined prehistoric sites in 1987. An undated newspaper article from the Star-Tribune shows photographs of the Oscar Biedes collection (included with the 11-Ck-250 site form).

David J. Keene and Theodore J. Karamanski (1980) also reported site 11-Ck-284 within the Joe Louis “The Champ” Golf Course (designed by Dick Nugent) during survey work completed for the Forest Preserve District of Cook County. Ed Lace recorded the Joe Louis site in 1986 after an informal testing program. The 21.2-acre late Fisher Upper Mississippian site (circa A.D. 1200–1400) has been partially destroyed by golf course construction, but further testing in 2010 discovered that part of the site is preserved in the wooded area between the golf course and the Little Calumet River (Porubcan and Baltus 2011).

4.3 Potential for Project Effects

As no previously recorded sites fall within the RLE APE, the RLE Project would produce no effect on known archaeological resources. Additional archaeological sites may remain undiscovered within the project footprint; archaeological investigations will occur within areas of ground disturbance for the preferred alternative.

Section 5

Identification of Architectural Resources

This chapter presents the historic contexts and a description of historic properties for each of the six communities within the RLE Project APE: Washington Heights, Roseland, Morgan Park, West Pullman, and Riverdale within the City of Chicago, and the Village of Calumet Park. Figure 5-1 illustrates the location of each community relative to the project.

A series of maps in Appendix A graphically presents an overview of listed sites and surveyed properties; individual inventory sheets for surveyed properties are included in Appendix B. The map also identifies properties surveyed in the CHRS that were rated Red or Orange. CHRS properties are discussed further in **Section 5.7**.

Following the discussions of the built environment in the six communities, **Section 5.8** discusses parks that fall within the APE. Parks and other Section 4(f) resources are discussed in a separate technical memorandum prepared for the project; this memo only evaluates their eligibility for listing on the NRHP as historic resources.

5.1 Washington Heights

The following subsections include a description of the historic context for the development of Washington Heights (**Section 5.1.1**) and an overview of properties that were surveyed (**Section 5.1.2**). No NRHP-listed sites or districts fall within the RLE APE in the Washington Heights community.

5.1.1 Historic Context

The community of Washington Heights, approximately 11 miles south of Chicago's Loop, is roughly bounded by 89th and 91st Streets on the north, 107th Street on the south, Stewart Avenue on the east, and Beverly Avenue on the west.

Washington Heights Development in the 19th Century

The present community of Washington Heights is bisected by Vincennes Avenue, originally an Indian trail that served as an important route to Chicago from the south during the 19th century. Pioneer Norman Rexford established a home and tavern at 91st Street and Vincennes Avenue in 1834, just a year after Chicago was incorporated, and farmers slowly moved into the area during the ensuing decades. The coming of the railroads hastened drainage of the swampy flatlands, thereby encouraging settlement. In the 1860s a small settlement of German and Irish railroad workers gravitated to the vicinity of 103rd Street and Vincennes Avenue, near the intersection of the Chicago, Rock Island and Pacific Line, and the Panhandle Line (Pittsburgh, Cincinnati and St. Louis Railroad), an area that became known as "The Crossing" (Chicago Fact Book Consortium 1995:206).

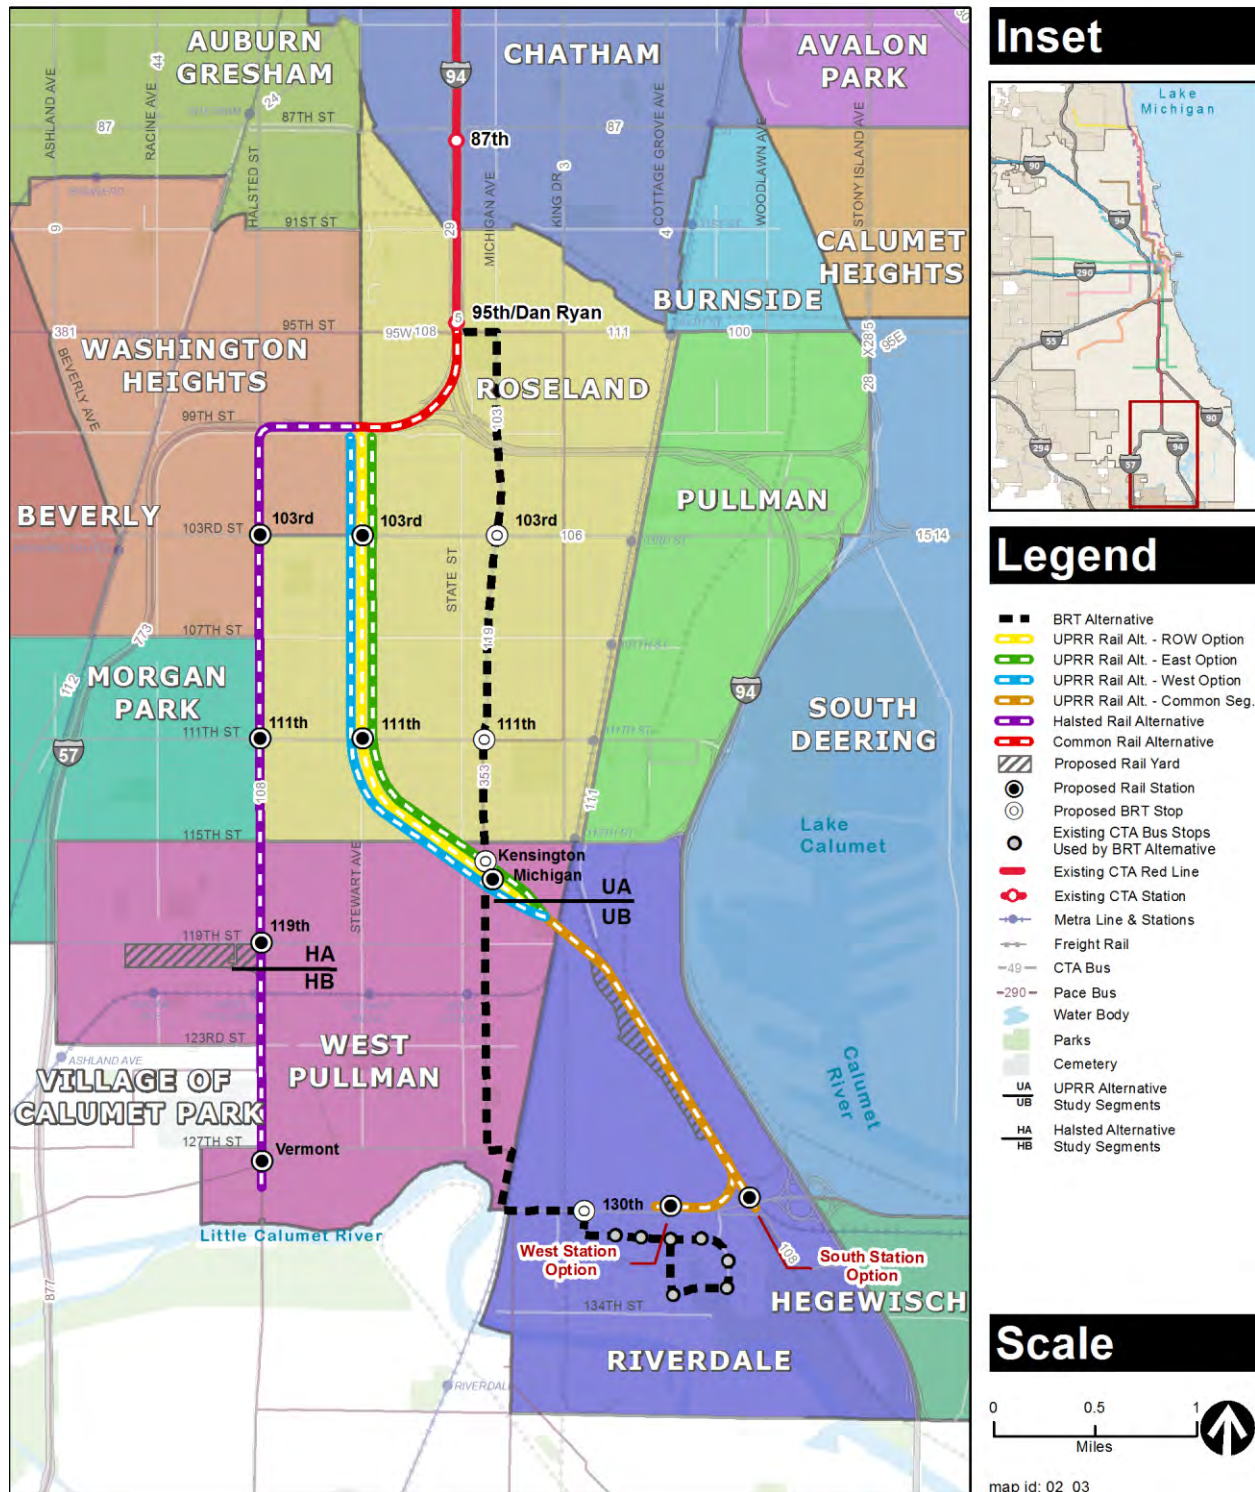

Figure 5-1: Community Areas and Red Line Extension Alternatives

Subdivision of the present Washington Heights community began in its southwestern corner during the mid-1860s when Willis M. Hitt and Lauren P. Hilliard bought farmland in the area between 103rd and 107th Streets, between Loomis and Racine Avenues. A small settlement was established around a new station on the Rock Island Railroad line that ran through this area. In 1870 the Blue Island Land and Building Company purchased and subdivided 1,500 acres between 99th and 107th Streets, but it was not extensively developed during the 19th century (Keating 2008:289).

The Village of Washington Heights was incorporated in 1874, with boundaries that stretched from 95th to 107th Streets between Halsted Street and Western Avenue and included much of the present Chicago community of Beverly. A substantial public school building was erected in 1874 at a cost of \$20,000, replacing a one-room schoolhouse built in 1866 along 103rd Avenue (Andreas 1884:647). Surviving houses from this early stage of development include a modest Greek Revival style frame house at 9635 South Genoa Avenue and a larger frame home at 9802 South Winston Avenue, distinguished by pointed arch windows in the Gothic Revival style; both homes date to the 1870s (Chicago Department of Housing and Economic Development 1996).

In 1874 the Catholic Church of the Sacred Heart established the Academy of Our Lady of the Sacred Heart in its convent along 95th Street. The school educated about 150 young women, both day and boarding students, by the mid-1880s. The growing population of the girls-only school led the church to build an impressive four-story red brick Romanesque Revival-style edifice at the southwest corner of 95th and Throop Streets in 1899. The girls' school housed classrooms, dormitories, and an auditorium. The German Lutheran Zion Congregation, also founded in 1874, built a frame church at the corner of 99th Street and Vincennes Avenue and a small adjacent school (Andreas 1884:648).

During the 1880s two additional settlements were established within the present boundaries of Washington Heights, although they were originally outside the 1874 boundaries of the Village of Washington Heights. The first, called "Fernwood," was located along the line of the Chicago and Eastern Illinois Railroad east of Halsted Street, between 99th and 103rd Streets. By 1885 there were a reported 180 homes in the area, inhabited mainly by native-born Americans and some Dutch (Keating 2008:289). In 1887 the newly formed Village of Fernwood created a wide parkway between 99th and 103rd Streets. Trees and grass were planted and the village extended Fernwood Parkway north to 95th Street the following year. Though the new parkway provided a lovely setting for new homes and its handful of businesses, the sleepy village remained sparsely settled in the 19th century.

The Brainerd subdivision was created in 1885 and extended from 87th Street to 91st Street, between Racine and Ashland Avenues. The portion of this subdivision north of the Rock Island tracks is now part of the Auburn Gresham community. A Rock Island station was opened at 89th and Loomis Streets in 1889, but settlement awaited the 20th century. By 1890 there were only about six houses in Brainerd (Keating 2008:289).

In 1889 Kansas City bridge builder Horace Horton established the Chicago Bridge and Iron Company in the southwest corner of Washington Heights near the “The Crossing” at 103rd Street and Vincennes Avenue. The company is credited with establishing the Beverly Bank in Washington Heights, which served as a mortgage lender to many Chicago Bridge and Iron Company workers.

Annexation by Chicago of what is now considered the Washington Heights community took place in three stages. In 1890 the area north of 95th Street, including the Brainerd subdivision, was annexed along with South Englewood. Later that year the Village of Washington Heights voted to join them. Fernwood residents feared that becoming part of Chicago would result in the opening of saloons and increasing taxes and thus voted against annexation. Due to its refusal to be annexed, the Village of Fernwood became an island in the city, nicknamed “the Monaco of Chicago” (Chicago Tribune 1890). Residents soon reconsidered their decision, as the small village could not afford to pave its streets or build a school. Annexation of the Fernwood neighborhood took place in 1891 and brought the last section of the current community area within the Chicago city limits. Washington Heights remained sparsely settled through the 1890s, although subdivision activity continued. The land from 91st to 95th Streets, between Vincennes and Ashland Avenues, was subdivided by Cremin and Brenan in 1891 and marketed as the Fairview Park Subdivision (Chicago Tribune 1891a).

Washington Heights Development: 1900 to 1950

By 1900 the western portion of Washington Heights had become known as Beverly. The low-lying eastern portion retained the name of Washington Heights. The present Washington Heights community grew slowly and continued its slow growth in the early 20th century due to poor transportation to Chicago’s Loop. It wasn’t until 1919 and 1920 that streetcar lines were extended southward along Halsted Street, Racine Avenue, and Ashland Avenue to Washington Heights. As late as 1920, Washington Heights had a population of just about 8,000 and still featured large areas of undeveloped land. This was to change during the citywide construction boom of the 1920s, during which the population more than doubled to 18,000 (Chicago Fact Book Consortium 1995: 206). Vacant parcels throughout the community were improved with brick bungalows and, to a lesser degree, with two- and three-flat residential buildings, homes designed in the popular American Foursquare style, and small brick apartment buildings.

Many of Washington Heights’ residents during this period were Germans, Swedes, and Irish who had moved from South Englewood and Greater Grand Crossing in search of better housing. They were served by new institutions and parks, such as the Gothic Revival style Mt. Vernon Public School at 10540 S. Morgan Street, which featured a large adjacent park. The growing St. Margaret of Scotland Parish, which had a large Irish congregation, built a commodious new church (1928) and school (1930) near the intersection of 98th and Throop Streets. Architect Charles Wallace designed both of these Gothic Revival style edifices. The Academy of Our Lady School at 95th and Throop Streets (which became known as Longwood Academy) expanded its campus during the 1920s with three additional buildings that housed dormitories, a music conservatory, and a science hall. After 1950, it served only as a high school (Illinois High School Glory Days 2012).

The 5.5-acre Euclid Park at 9800 S. Parnell Avenue was established during the 1920s to serve the area that was once the old Village of Fernwood. An area real estate office building was moved into the new park for use as a small recreation building and ball fields were installed. The 8-acre Brainerd Park was established during the 1930s at 1246 S. 92nd Street, and featured outdoor athletic facilities and a small field house. It was named for Mr. Brainerd, one of the five founders of the Rock Island Railroad (Chicago Park District 2012).

The boom period of the 1920s was mainly confined to residential development. Washington Heights never developed a cohesive business district, although major thoroughfares in the community such as 103rd Street, Vincennes Avenue, and Halsted Street developed as mixed-use districts with one- to three-story commercial buildings and structures such as gas stations intermixed with residential buildings. Commercial buildings from this period were typically one to three stories in height, mainly faced in brick, with storefronts below and apartments above. Detailing was restrained and included stone lintels and sills, storefront surrounds of stone or terra cotta, and stone or metal cornices or parapets. Most of the commercial buildings were not designed in a specific architectural style, but often included details from a style, such as the Queen Anne, Romanesque, or Classical Revival.

The Chicago Bridge and Iron Company was a major employer in Washington Heights during the first half of the 20th century, with about 600 workers in 1910. During World War II, the company temporarily became a large military contractor and had 12,000 workers making military vessels (Wilson 2005). Residential growth continued through the Depression and World War II, and Washington Heights reached residential maturity before 1950. In that year the population was approaching 25,000 (Chicago Fact Book Consortium 1995:206).

Washington Heights Development: 1950 to Present

Vacant lots throughout Washington Heights were improved with suburban style tract homes and split-level homes during the 1950s and 1960s, a period that also saw the construction of Interstate 57 through the community's southeast quadrant. Community demographics also began to change in the post-World War II period as African-Americans began moving into the area east of Halsted Street. By 1960, African-Americans comprised 12 percent of the total population of about 30,000 residents. Irish, Germans, and Swedes were still the predominant white ethnic groups. During the 1960s, the white population dropped by almost two-thirds while the number of African-American residents increased. A new Washington Heights civic organization was formed in 1967 with the goal of promoting "racial stability" (Wright 1967). By 1970 African-Americans comprised 75 percent of the population, which peaked at 36,540. Ten years later the community had declined in population to 29,843 residents, 98 percent of whom were African-American (Chicago Fact Book Consortium 1995:206).

Several new Modernist style schools were erected in Washington Heights during this period, including the Charles Wacker Elementary School at 9746 S. Morgan Street; the two-story Medgar Evers Elementary School at 9811 S. Lowe Avenue; the three-story Marcus Garvey Elementary School at 10309 S. Morgan Street; and the three-story Percy Julian High School at 10330 S. Elizabeth Street, which opened in 1975. The Carter G. Woodson Regional Library at 9525 S.

Halsted Street, named for an African-American historian, opened in 1975. The two-story building features a 182-seat auditorium and houses the Vivian Harsh Collection, which is the second-largest collection of African-American history and literature in the country. Longwood Academy (originally Academy of Our Lady) at 95th and Throop Streets closed its doors in 1999 and its campus is now the home of Chicago International Charter School-Longwood (Bechetta 1999).

During the late 1990s, much of Halsted Street between 99th and 107th Streets was designated as a Redevelopment Area by the City Council. This designation entitled the city to acquire and assemble land to attract developers. Beautification efforts included median improvements and the installation of planters (Almada 1999). In 2001 the City designated a 58-acre parcel in the southwestern corner of the community as the 105th/Vincennes Avenue Tax Increment Financing (TIF) District. The parcel extends from 103rd to 107th Streets, between I-57 and Vincennes Avenue. Many blocks within the district are irregularly shaped due to the various railroad ROWs and the diagonal alignment of Vincennes Avenue. At the time of designation, this area was largely characterized by vacant and underused land and deteriorated and obsolete buildings, and suffered from a lack of private investment (URS/TPAP 2003:3-4).

The 105th/Vincennes Avenue TIF District was created to assemble large tracts of vacant and underused land for redevelopment as a cohesive and distinct residential neighborhood. Targeted development sites include the former Chicago Bridge and Iron Works property (Ernst and Young 2005, 2010, Camiros Ltd. 2003). New residential development within the TIF District has had a slow start, however. A plan to build 124 homes on six square blocks collapsed and only about two dozen two-story homes were built in the vicinity of 105th Street and Vincennes Avenue (Rodkin 2012). Today Washington Heights is a middle class, African-American neighborhood and the vast majority of its built landscape comprises small, single-family, owner-occupied homes. The community has seen little new construction in recent years.

5.1.2 Surveyed Resources

As part of the fieldwork for the RLE Project, 69 buildings within the Washington Heights portion of the APE were surveyed. These properties, along with their construction date and an assessment of their eligibility for listing on the NRHP, are presented in Table 5-1, alphabetized by street name. Properties determined individually eligible are highlighted. A series of maps in Appendix A graphically presents these findings; individual inventory sheets for surveyed properties are presented in Appendix B.

Table 5-1: 69 Surveyed Properties in Washington Heights

Address	Year Built	Description	Eligibility**
435 W. 100th Place	1942	Single-Family	Not Eligible
444 W. 100th Place	1930	Eclectic Neo-Traditional Home	Eligible
426 W. 100th Street	1943	Single-Family	Not Eligible
430 W. 100th Street	1919	Single-Family	Not Eligible
438 W. 101st Place	1955	Single-Family	Not Eligible
416 W. 102nd Place	1929	Chicago Style Bungalow	Not Eligible
444 W. 102nd Street	1913	Single-Family	Not Eligible
424 W. 103rd Street	1889	Religious Building	Not Eligible
748 W. 103rd Street	1928	Commercial (vacant)	Not Eligible
800-804 W. 103rd Street or 10252-10258 S. Halsted Street	1991	Commercial	Modern
814-824 W. 103rd Street	1958	Commercial	Not Eligible
418 W. 98th Place	1931	Chicago Style Bungalow	Not Eligible
401 W. 99th Street	1942	Single-Family	Not Eligible
9824 S. Eggleston Avenue	1965	Single-Family	Not Eligible
10024 S. Eggleston Avenue	1943	Single-Family	Not Eligible
10058 S. Eggleston Avenue	1930	Chicago Style Bungalow	Not Eligible
10100 S. Eggleston Avenue	1894	Single-Family	Not Eligible
10104 S. Eggleston Avenue	1904	Single-Family	Not Eligible
10142 S. Eggleston Avenue	1948	Single-Family	Not Eligible
10148 S. Eggleston Avenue	1919	Single-Family	Not Eligible
10200 S. Eggleston Avenue	1888	Single-Family	Not Eligible
10236 S. Eggleston Avenue	1913	Single-Family	Not Eligible
9818 S. Emerald Avenue	1899	Single-Family	Not Eligible
9823 S. Emerald Avenue	1944	Single-Family	Not Eligible
9900 S. Emerald Avenue	1947	Single-Family	Not Eligible
9906 S. Emerald Avenue	1942	Single-Family	Not Eligible
9909 S. Emerald Avenue	1944	Single-Family	Not Eligible
9936 S. Emerald Avenue	1955	Modernist Style Residence	Not Eligible
10004 S. Emerald Avenue	1909	Flat	Not Eligible
10100 S. Emerald Avenue	1940	Neo-Tudor Style Residence	Not Eligible
10134 S. Emerald Avenue	1939	Minimal Traditional Residence	Not Eligible
10216 S. Emerald Avenue	1956	Single-Family	Not Eligible
9909 S. Green Street	1929	Chicago Style Bungalow	Not Eligible
9957 S. Green Street	1952	Single-Family	Not Eligible
10051 S. Green Street	1928	Craftsman Style Residence	Not Eligible

Address	Year Built	Description	Eligibility**
10157 S. Green Street	1957	Single-Family	Not Eligible
10201 S. Green Street	1926	Chicago Style Bungalow	Not Eligible
10237 S. Green Street	1926	Chicago Style Bungalow	Not Eligible
10345 S. Green Street	1919	Single-Family	Not Eligible
10401 S. Green Street*	1949	Minimal Traditional Residence	Not Eligible
10457 S. Green Street*	1956	Single-Family	Not Eligible
10541 S. Green Street*	1962	Single-Family	Not Eligible
10601 S. Green Street*	1954	Single-Family	Not Eligible
9901 S. Halsted Street	1987	Commercial	Modern
9911 S. Halsted Street	1986	Commercial	Modern
9915 S. Halsted Street	1996	Substation & Cell Tower	Modern
10004 S. Halsted Street	1957	Commercial	Not Eligible
10019 S. Halsted Street	1996	Church	Modern
10114 S. Halsted Street	1903	Multi-Family	Not Eligible
10116 S. Halsted Street	1937	Multi-Family	Not Eligible
10159 S. Halsted Street	1952-1962	Religious	Not Eligible
10227 S. Halsted Street	1919-1920	Classical Revival Substation	Eligible CHRS Orange
10238-10240 S. Halsted Street	1938	Mixed-Use	Not Eligible
10241 S. Halsted Street	1894	Single-Family	Not Eligible
10326 S. Halsted Street	1938-1959	Mixed-Use	Not Eligible
10506 S. Halsted Street	1955	Commercial	Not Eligible
9906 S. Lowe Avenue	1904	Single-Family	Not Eligible
9907 S. Lowe Avenue	1926	Single-Family	Not Eligible
9822 S. Normal Avenue	1947	Single-Family	Not Eligible
9900 S. Normal Avenue	1953	Single-Family	Not Eligible
9925 S. Normal Avenue	1946	Single-Family	Not Eligible
9821 S. Parnell Avenue	1961	Single-Family	Not Eligible
9900 S. Parnell Avenue	1950	Single-Family	Not Eligible
9901 S. Parnell Avenue	1965	Single-Family	Not Eligible
9819 S. Union Avenue	1962	Single-Family	Not Eligible
9822 S. Union Avenue	1944	Single-Family	Not Eligible
9901 S. Union Avenue	1948	Minimal Traditional Residence	Not Eligible
9906 S. Union Avenue	1957	Single-Family	Not Eligible
9912 S. Wallace Street	1922	Single-Family	Not Eligible

CHRS = Chicago Historic Resources Survey

* Surveyed property within proposed Green Street Historic District

** Properties noted as "Modern" are less than 50 years in age and do not exhibit "exceptional importance."

5.1.2.1 National Register of Historic Places-Eligible Resources

Of the 69 buildings surveyed within the Washington Heights portion of the RLE APE, 2 were identified as eligible for listing on the NRHP. These are briefly described below.

In addition, one NRHP-eligible historic district was identified along Green Street, between 104th Street and 109th Street. A cluster of Chicago Georgian and Raised Ranch homes exist in this area. While only one side of Green Street falls within the APE, the area could form a district under NRHP Criterion C based on its architecture. The linear streetscape features a cohesive grouping of vernacular homes of the type used to build up the outlying areas of Chicago that developed in the post-WWII era. Although such neighborhoods are common throughout the city, these five blocks include front gabled and hip roof ranch homes, front gabled cottages, and Chicago Georgian style homes with little to no modern infill. Individual homes date from the 1950s and 1960s and feature the same setbacks and similar brick cladding. They appear to be well maintained. A portion of the district falls within the Morgan Park neighborhood. The proposed district boundary is shown in Figure 5-2. Eight buildings were surveyed within the proposed Green Street Historic District but none are recommended as individually eligible.

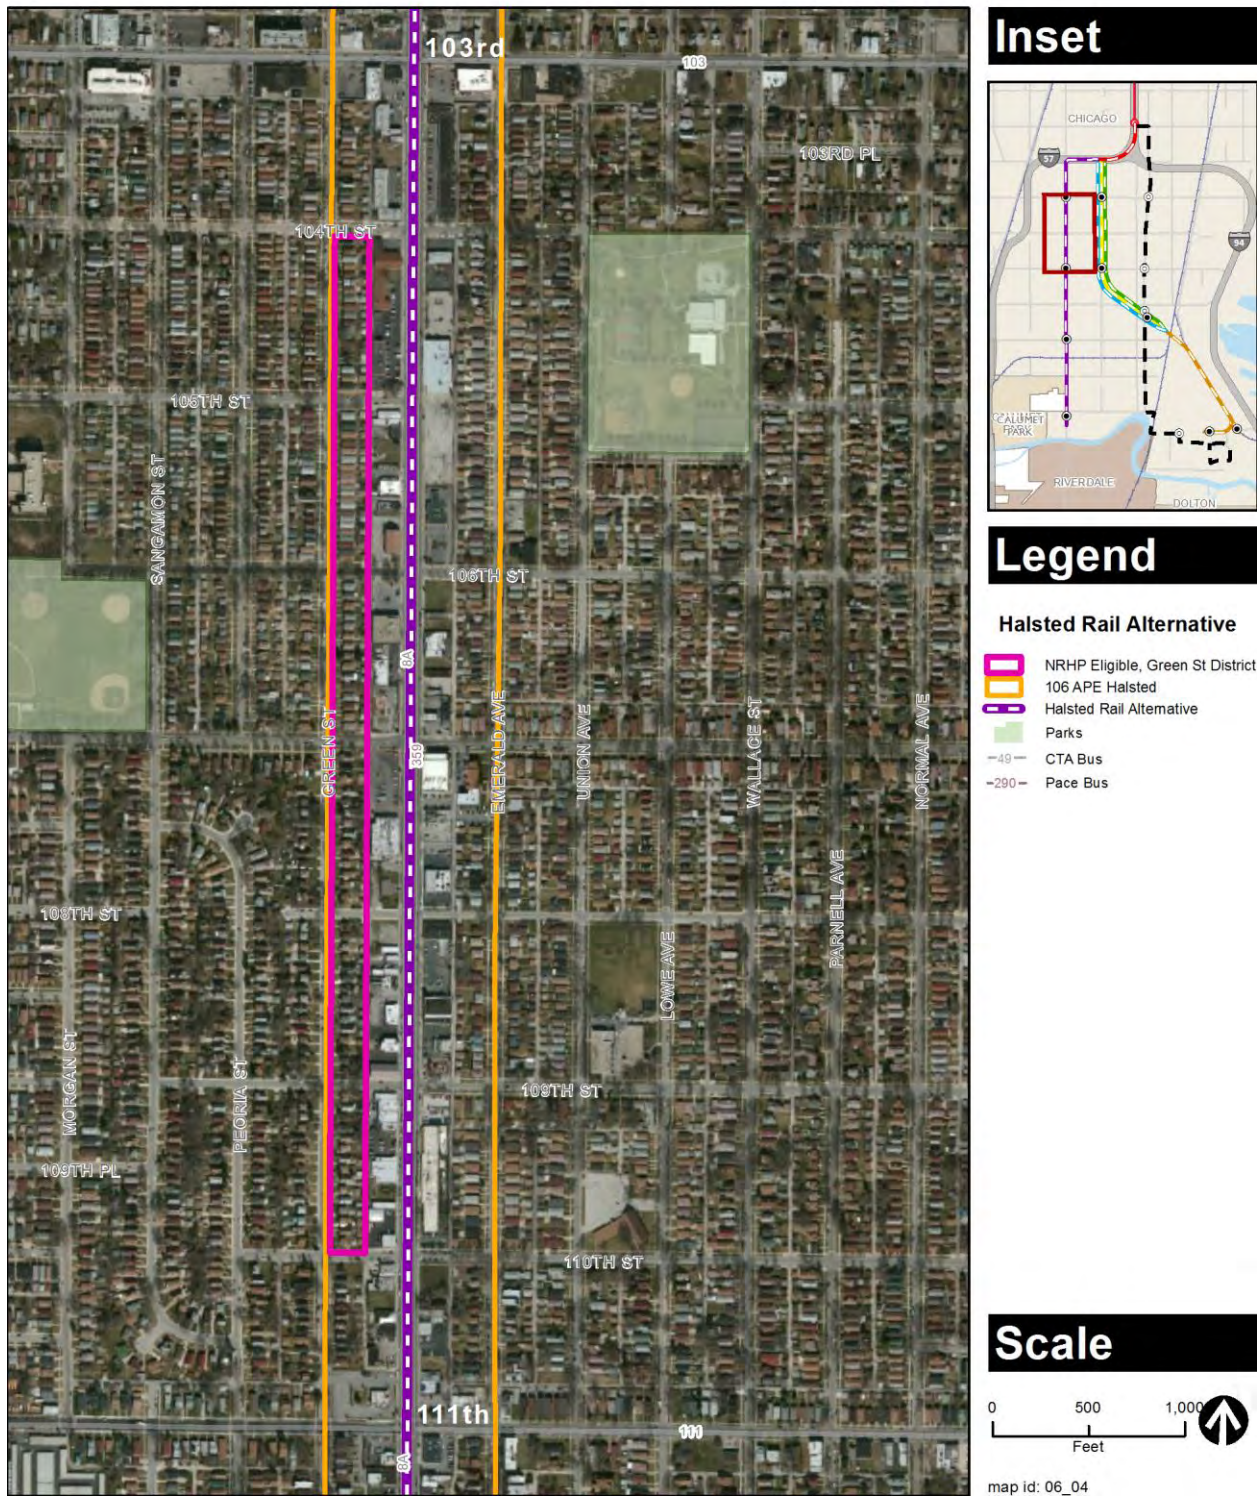

Figure 5-2: Proposed Boundary for Green Street Historic District and Red Line Extension Area of Potential Effects

Eclectic Neo-Traditional Home, 444 W. 100th Place

This one-story home in the Washington Heights community rests on a raised basement as shown in Figure 5-3. Built in 1930, it is clad with polychromatic brick and has a side gabled roof covered with asphalt shingles. Its front elevation has a gabled living room bay pavilion with paired basement windows, a group of three non-original one-over-one windows with concrete sills, brick arch lintels, colonettes with acanthus leaf capitals, and a small round-arched window in the gable. The house has a recessed corner porch with a metal storm door, round-arch openings, a Neo-Gothic castellated top, concrete steps, and brick sidewalls. The integrity of its materials and detailing is very good. Its Eclectic Neo-Traditional ornamentation makes it stand out among the vernacular, stripped-down brick and frame bungalows and cottages that comprise the predominant building stock in the Washington Heights community. As a result, it was identified as individually eligible for NRHP listing under Criterion C for its architecture.

Figure 5-3: South Facade of the Eclectic Neo-Traditional Home at 444 W. 100th Place

Classical Revival Substation, 10227 S. Halsted Street

This vacant two-story Classical Revival style substation in Washington Heights has a stone water table. Built circa 1920, it is clad with multi-hued brown face brick on its front elevation and common brick along its side and rear elevations. The building is shown in Figure 5-4. The building has a flat roof with parapet. Dark brown-colored brick accents the facade with stringcourses, soldier courses, and cruciform patterns against the reddish brown-colored brick. The front elevation features a centrally located entrance with a Classical surround that includes Ionic columns and an entablature including a segmental pediment and frieze band with incised lettering that reads, “Southwest Substation.” The original door, sidelight, and transom have been removed and their openings covered with plywood. Directly above the entrance is a strip of three plywood-covered window openings with stone casing. Decorative detailing includes full-height brick corner pilasters, a stone belt course above the windows, and a stone cornice with widely spaced dentils. Directly beneath the cornice is a stone panel with incised lettering that reads, “City of Chicago Dep’t of Gas & Electricity.” Nearly all of the side elevation window openings are covered with plywood.

Figure 5-4: West Facade of the Classical Revival Substation at 10227 S. Halsted Street

This is a rare extant example of a Classical Revival substation in Washington Heights. The substation has retained its decorative detailing; it is possible that original windows may be behind the wood covering. Assuming that the interior has retained interior fabric, this building is recommended as individually eligible for listing on the NRHP under Criterion A for its association with utilities infrastructure and under Criterion C for architecture.

5.1.2.2 Properties Surveyed but Determined Ineligible

Beyond the properties that were identified as individually eligible for NRHP listing, a number of properties were surveyed that did not meet the criteria. Generally, these properties had subsequent alterations that compromise their historic integrity, or they do not feature a level of distinctive architectural detailing necessary to qualify for the NRHP.

5.2 Roseland Community

The following subsections include a description of the historic context for the development of the Roseland community (**Section 5.2.1**) and an overview of historic properties that were surveyed (**Section 5.2.2**). No NRHP-listed sites or districts fall within the RLE APE in the Roseland community.

5.2.1 Historic Context

The Roseland community, which is approximately 12 miles south of Chicago's Loop, is bounded by train tracks on the north, 115th Street on the south, Cottage Grove Avenue on the east, and Halsted and Stewart Streets on the west. The community is served by public transportation via the CTA Red Line station at 95th Street, the last stop on this line, and by the Metra with four stops between 103rd and 115th Streets.

Roseland Development in the 19th Century

The Roseland community was undeveloped wet prairie with occasional patches of dry prairie in the mid-19th century. The Chicago-Thornton Road (now Indiana Avenue), which was built on high prairie, crossed the community. Initial settlement occurred in 1849 when a group of Dutch families from the district between Amsterdam and Rotterdam in Holland, in search of land for truck farming, established a settlement of frame houses along this road between 103rd and 111th Streets. One of the immigrants' first endeavors was to build a small wood meeting house at the southwest corner of 107th Street and Michigan Avenue in 1850 for the First Reformed Church of Roseland, the first of three Dutch churches on this site (Andreas 1884:607).

The immigrants became known as the "Hollanders of the High Prairie." They cultivated cabbage, cauliflower, beets, carrots, potatoes, and tomatoes, which they hauled to Chicago's South Water Street Market on the Chicago-Thornton Road. More Dutch immigrants settled the low-lying land between the high prairie and Lake Calumet to the east. Some of the Dutch worked on the construction of the new railroads. The community was called Hope when the first post office opened in 1861, and was initially part of the Lake Township. In 1867 the area east of State Street became part of the newly incorporated Village of Hyde Park (Chicago Fact Book Consortium 1995:152). The Dutch truck farmers also grew flowers, and the lavish annual display of red roses led to the adoption of the name of Roseland for the community in the 1870s. The gable-roofed cottage at 10057 S. Michigan Avenue (1869) is a rare extant home from this early period of agricultural settlement.

Roseland remained a sparsely settled pastoral village of 772 residents in 1880, featuring Old World language and customs as noted by A.T. Andreas (1884:607) in his History of Cook County:

“Its inhabitants are the sturdy phlegmatic, industrious, natives of Holland; and standing by some of the little, squat, small-windowed houses, hearing the high-Dutch gutturals, seeing the pollards and rectangular enclosures, the square-faced, wooden-shoed, tow-headed little Dutchmen; in fact, observing the *tout ensemble* would cause one to fancy themselves rather near Amsterdam, or in primitive Nieuw Amsterdam, rather than fifteen miles from Chicago.”

Roseland’s transformation to an urban community began in the 1880s with the establishment of the Pullman Palace Car Company to the east and the development of several additional railroads along the borders of the area. The annexation of both Lake Township and the Village of Hyde Park in the early 1890s brought Roseland within Chicago’s city limits. The Calumet region became steadily industrialized during the 1890s as the Illinois Central Railroad built its Burnside shops in the northeast section of Roseland.

Swedish, German, English, and Irish workers moved into the Roseland community in the late 19th century, attracted to readily available jobs for the railroads, the Pullman shops, steel plants, and other industries that moved into the Calumet region. Roseland’s population spread to the south and west and the new residences included modest one- and one-and-a-half-story frame workers’ cottages, such as those at 351 W. 109th Street (1889) and 11336 S. Yale Avenue (1894). Less common were cottages built of brick, such as the Italianate style example at 11452 S. Indiana Avenue (1880s).

An impressive Romanesque Revival style public elementary school, the Peter Van Vlissingen School at 137 W. 108th Street (demolished 1999), was completed in 1892 by the Chicago Board of Education. Numerous churches were built in the community during the 1880s and 1890s, including the German Catholic St. Nicholas Church at 11324 S. State Street (built 1896 by architect William Brinkmann) and the church at 11032 S. Indiana Avenue (1891), both designed in the Gothic Revival style. Holy Rosary Church at 113th Street and Martin Luther King Drive was built for the Irish community in 1890 and designed in the Romanesque style by Pullman architect Solon Beman. The First Reformed Church of Roseland at 10706 S. Michigan Avenue, a designated Chicago landmark built in 1887 by architects Henrik De Jong and Jan Kleinhuizen, became the third Dutch church on this site (Taussig 1989).

The corner of 111th Street and Michigan Avenue served as a commercial node for Roseland’s earliest settlers, growing to the north and south with the extension of the Michigan Avenue streetcar line to 115th Street in 1892. The two-story buildings at 11314 S. Michigan Avenue, 11349 S. Michigan Avenue, and 11433 S. Michigan Avenue with ground floor shops and flats above are representative of this period of development. The 11314 and 11349 S. Michigan Avenue buildings retain their decorative second-story pressed metal window bays, while the 11433 S. Michigan Avenue building features intact terra cotta detailing. By the turn of the 20th century, Roseland’s Michigan Avenue stores served customers from several nearby communities, including Burnside and West Pullman, and its merchants had formed the South End Merchants Association (later called the South End Chamber of Commerce).

Roseland Development: 1900 to 1950

Roseland's largest green space—the 40-acre Palmer Park—was created in 1904 on the tract bounded by 111th and 113th Streets to the north and south, and by King Drive and Indiana Avenue to the east and west. The park is named for Potter Palmer (1826–1902), one of Chicago's most successful merchants and a member of the South Park Commission that established Palmer Park as part of its revolutionary neighborhood parks system to provide green space in Chicago's crowded immigrant neighborhoods. Palmer Park, as well as the nine other South Side neighborhood parks that opened in 1905, was designed by the Olmsted Brothers, a nationally renowned landscape architecture firm. The Classically styled fieldhouse was designed by the prominent Chicago firm of D. H. Burnham and Company. In 1934, Park District Art Director James Edward McBurney created three murals for the Palmer Park Fieldhouse as a Works Progress Administration project funded by the federal government. They are titled “Native Americans,” “Explorers,” and “Dutch Settlers.”

In 1910 the City of Chicago erected a pumping station and firehouse across the street from each other on the 300 block of West 104th Street and donated adjacent property to Chicago's Special Park Commission for the creation of a natatorium with swimming and changing room facilities. The natatorium, which opened in 1916, was equipped to serve 1,500 patrons per day. A gymnasium was added to the natatorium in the 1920s. The surrounding park was named in 1940 for Eugene H. Block (1865–1938), who served as Alderman for the 33rd and 9th Wards between 1910 and 1917.

The Pullman Free School of Manual Training opened in 1915 at 11006 S. Indiana Avenue, on the block just north of Palmer Park. Designed by architect Frank Jobson in the Classical Revival style, the school was built through a bequest of \$1.2 million made by George Pullman upon his death in 1897, with an additional bequest made later by Mrs. Pullman. The school served the children of employees of the Pullman car works and the Pullman-Roseland communities (*Chicago Tribune* 1914, 1915). The school closed in 1950, as its endowment could no longer sustain the rising costs of the school, which was prohibited from charging tuition according to Pullman's will. In subsequent years, the building served as the Gregor Mendel Roman Catholic High School, operated by the Augustinians (1951–88), and as St. Martin de Porres High School, operated by the Archdiocese of Chicago (1989–97). The building was sold to the Chicago Public Schools system in 1998, and opened in 1998 as the Southside College Preparatory Academy, which was renamed in 2001 in honor of Gwendolyn Brooks, a former South Side resident and U.S. poet laureate.

Polish and Italian immigrants were added to Roseland's ethnic mix in the early 20th century. In 1920 Roseland's population stood at 28,241 and abundant undeveloped land remained throughout the community. This situation was to change quickly during the decade to follow, when Roseland's population rapidly increased with an influx of Lithuanians, Italians, Germans, and a small number of African-Americans. The accompanying building boom of the 1920s transformed Roseland into a mature residential community and vacant parcels were improved with one- to two-story gable-roofed wood cottages, brick bungalows, and wood frame homes in the popular American Foursquare style. Some multi-family brick two-flats and small apartment buildings were built as well, including an Art Deco style apartment building at 10411 S. Rhodes Avenue (1929).

The years from 1900 to 1950 saw the erection of numerous churches to serve Roseland's growing multi-ethnic community. Holy Rosary Church added a rectory (1901) and a two-story Renaissance Revival style Catholic school (1916; Anders G. Lund) along the 113th block of Martin Luther King Drive (Chicago Real Estate Daily 2008). Solon S. Beman was the architect of the Classical Revival style Sixth Church of Christ, Scientist at 11325 S. Prairie Avenue (1911), one of six Christian Science church buildings he designed in Chicago. The Roseland Christian School, a three-story brick building at 314 W. 108th Street, was built by the Dutch community in 1929. Institutional buildings erected during the 1920s in Roseland included the Pullman Public Library at 11011 S. Indiana Avenue, a Classical Revival style building designed by Arthur Hussander, and the Roseland Community Hospital at 45 W. 111th Street.

During the early 20th century, Roseland's Michigan Avenue commercial district expanded to encompass the mile-long stretch from 103rd Street to 115th Street. Its wide range of small shops, department stores, and recreational amenities including bowling alleys and movie theaters attracted customers from an ever-expanding geographic area on the South Side. Buildings erected along Roseland's commercial spine were typically one to two stories in height, mainly faced in brick, with commercial storefronts and apartments above. Detailing was restrained and included stone lintels and sills, storefront surrounds of stone or terra cotta, and stone or metal cornices or parapets. The two-story building at 11000 S. Michigan Avenue is an example of a terra cotta-clad building from this period. Most of the commercial buildings were not designed in a specific architectural style, but often included details from a style such as the Queen Anne, Romanesque, Classical Revival, or Chicago School. Some buildings had more elaborate upper-story ornamentation, such as pressed metal window bays or Sullivanesque panels in terra cotta, as displayed in the one-story building at 10351 S. Michigan Avenue.

In 1917 James Gately opened the two-story Gately's People Store at the corner of 112th Street and Michigan Avenue, a Chicago School style department store that became a fixture in the community until its closure in 1980. The 2,000-seat State Theater at 110th Street and Michigan Avenue opened in 1922; the block-long building, which featured store-and-office wings flanking the theater, quickly became a prominent visual landmark in the community with its marquees and exuberant, Classically styled ornamentation in terra cotta. The considerably smaller Roseland Theater at 11331 S. Michigan Avenue was designed in a restrained version of the Art Deco style.

Roseland's growth slowed during the economic depression of the 1930s but rebounded during the 1940s following World War II, with population rising from 44,009 in 1940 to 56,705 in 1950 (Priddy 1954). African-Americans constituted a large portion of this increase. They moved to an enclave called Lilydale, which was established north of 99th Street after World War I. The Lilydale Improvement Association was formed to provide assistance to African-Americans seeking homeownership in the area (*Chicago Tribune* 1928). During the 1940s the Lilydale neighborhood was increasingly developed with small brick homes and duplexes. Many of these homes were located in the Princeton Park development, which was built in 1944 and bounded by 91st Street, 95th Street, Wentworth Avenue, and Harvard Avenue, and later expanded to State Street. In 1947 prominent African-American contractor Matthew Goodwin Sr., who worked in partnership with his two sons, built 30 homes in the Lilydale neighborhood. Goodwin's work was described in a

1947 *Chicago Tribune* article by Albert F. Barnett titled “Chicago Negroes Fight Housing Shortage, Build Their Own Homes:”

Goodwin Sr. is rated in housing circles as one of the ablest contractors in the city regardless of race...Goodwin up to date has constructed more than 700 homes for Negroes, a record reportedly without precedent anywhere in the nation among Negroes...At present Goodwin and Sons has 30 homes under construction on the far Southside in the section ranging from 90th Street to 95th Street and from State Street west to Perry Avenue.

Roseland Development: 1950 to Present

The private rental Princeton Park development was joined in 1954 by an adjacent Chicago Housing Authority project, comprising 128 row houses in 18 clusters centered around 95th Street and Wentworth Avenue. Designed by architect Sydney H. Morris, the Governor Frank O. Lowden Homes were mainly occupied by African-Americans fleeing the Black Belt of the inner city (Bowly 1978:86). The growing African-American community in Roseland’s northern section was served by the creation in 1950 of the 23-acre Abbott Park, which was bounded by 95th Street, 98th Street, State Street, and Michigan Avenue. The park, which features both a swimming pool and field, was named for Robert Abbott (1868–1940), who founded the influential *Chicago Defender* newspaper in 1905. In 1956, the park district sold a portion of the parkland to the Board of Education for the establishment of Harlan High School at 9652 S. Michigan Avenue.

During the 1950s and 1960s, Roseland served as a community—albeit on its northern end only—where African-Americans could purchase a home and build a future. Construction of the Dan Ryan Expressway during the late 1950s cut a wide swath through Roseland’s north end. This dramatic intervention on the urban landscape resulted in the demolition of many homes and physically divided this area from the remainder of the community to the south.

Roseland’s vacant edges were developed from the 1950s through the early 1970s with clusters of identical one-story and split-level tract homes. Residents of Roseland and neighboring communities continued to be served by the Michigan Avenue commercial district, which thrived into the 1950s. A 1957 *Chicago Tribune* article noted that the stretch of Michigan Avenue from 101st Street to 119th Street, which included four blocks of the West Pullman community to the south, featured “close to 500 stores which saw a \$76 million retail business as far back as 1954.” During the 1950s “The Avenue,” as it was called by Roseland residents, featured 119 food stores, 72 eating and drinking places, 72 apparel stores, 34 furniture and appliance dealers, and 18 drug stores, leading a contemporary *Chicago Tribune* reporter (Bach 1957) to optimistically state “Roseland is alive with new plans to meet the demands of its promising business future.”

Roseland’s economic fortunes began a rapid decline in the 1970s, however, due in large part to the collapse of the South Side’s industrial base. Industries such as the Pullman Company, Wisconsin Steel, International Harvester, CIP Warehousing, Allied Chemical, and Dutch Boy Paint Company that once hired numerous Roseland residents closed their doors, and other industries dramatically reduced their work forces. The establishment in 1972 of the Chicago State University on the former site of Illinois Central Railroad’s Burnside Shops in the northeastern corner of the

community was seemingly the only bright spot during this period. Jobs in Roseland decreased from 22,945 to 9,889 between 1974 and 1985 (City of Chicago Department of Planning 1991:9). The 53 percent decline in employment in this decade had a devastating effect on many households and businesses in the area.

Chicago's South Side workers followed their jobs to the far south suburbs. Joining them were residents who feared integration during a period when Roseland's racial composition changed dramatically. During the decade of 1970–80, Roseland changed from a racially mixed community to an almost exclusively African-American community. Roseland's economic woes quickly sparked a downward slide that featured a variety of community woes, such as unemployment, mortgage defaults, business failures, and gang-related problems. More than 900 mortgages were foreclosed during the 1970s and the Department of Housing and Urban Development (HUD) announced the beginning of a repair-and-sell program for repossessed houses in the Roseland area (Chicago Fact Book Consortium 1995:152). Roseland also lost a key recreational amenity when the 1915 natatorium building with swimming pool and gymnasium in Block Park was razed in 1998 and its site was converted to green space.

The most dramatic changes to Roseland's urban landscape, however, have occurred throughout its once thriving and densely built spine along Michigan Avenue. Decline set in as early as the 1960s, as the district found it hard to compete with automobile-oriented shopping centers such as Evergreen Plaza (95th Street and Western Avenue in Evergreen Park), Ford City (75th Street and Cicero Avenue), and River Oaks (Calumet City). The loss of residents' buying power in subsequent decades hastened the decline of the business district, which spurred the closure of larger community businesses such as Gately's Peoples Store and J.C. Penney, leaving behind smaller and more marginal businesses. Numerous commercial buildings that suffered from years of vacancy and neglect were razed, including the block-long State Theater, once a prominent visual landmark in the community. By the 1990s the Michigan Avenue corridor was characterized by large swaths of land and vacant buildings, especially in the area between 104th and 110th Streets; however, the stretch between 110th and 115th streets retained a concentration of buildings with viable retail establishments.

In response to this situation, the Chicago Department of Housing and Economic Development initiated a Community Assistance Panel in 1990 to analyze the Michigan Avenue Commercial District and to provide recommendations for its revitalization. The panel recommended that the area between 110th and 116th Streets be designated as the community's primary commercial district and that the area between 103rd and 110th Streets be designated as a primarily residential district (Chicago Department of Planning 1990:1).

In 2002 the city created the Roseland/Michigan TIF District, which encompasses 176 acres of commercial, residential, and institutional properties along Michigan Avenue between 100th and 120th Streets in the Roseland and West Pullman communities. The TIF District was created "to encourage a broad range of improvements to existing commercial and residential properties and to foster new construction where appropriate" (Chicago Department of Housing and Economic Development 1996). At the time of its designation, there were 484 buildings in the project area,

420 (86 percent) of which were classified as deteriorating, and 252 vacant lots (Trkla, Pettigrew, Allen & Payne:4). Some positive new developments in Roseland over the past decade include the Victory Centre of Roseland, a senior housing development at 10450 S. Michigan Avenue, single-family houses and two-flats along South Michigan Avenue between 105th and 107th Streets by Neighborhood Housing Services, and the Art Deco style Roseland Theater at 11331 S. Michigan Avenue that has been restored and converted to retail space.

5.2.2 Surveyed Resources

As part of the fieldwork for the RLE Project, 279 buildings within the Roseland portion of the APE were surveyed. These properties, along with their construction date and an assessment of their eligibility for listing on the NRHP, are presented in Table 5-2, alphabetized by street name. Properties determined individually eligible are highlighted. A series of maps in Appendix A graphically present these findings; individual inventory sheets for surveyed properties are presented in Appendix B.

Table 5-2: 279 Surveyed Properties in Roseland

Address	Year Built	Description	Eligibility
222 W. 98th Street	1964	Single-Family	Not Eligible
349 W. 99th Place	1979	Single-Family	Modern

CHRS = Chicago Historic Resources Survey

5.2.2.1 Resources Eligible for National Register of Historic Places

Of the 279 buildings surveyed within the Roseland portion of the RLE APE, 6 were identified as eligible for listing on the NRHP. These are briefly described below.

Fire Department Engine Company 93, 324 W. 104th Street

This two-story firehouse in the Roseland community is clad with light brown face brick, as shown in Figure 5-5. The building has a flat roof and a parapet with concrete coping. The front elevation has a two-story projecting pavilion, an overhead garage door, two window openings, an off-center, hollow-core metal door on the first floor, and a strip of three windows and a single window on the second floor. All windows are non-original, one-over-one aluminum sash. The spandrel area between the garage door and the windows above features a large stone sign plate inscribed with the words, “City of Chicago Fire Department.” The spandrel area between the corner door and window above has a metal plate identifying the 1917 construction date and the names of a series of people associated with the building’s construction, including the mayor, alderman, city architect (Charles W. Kallal), and contractor (Butler & Co.). Detailing includes stone door and window surrounds on the first floor, bracketed stone window lintels, concrete belt courses, and brick pilasters topped by stone panels with the City of Chicago’s “Y” emblem and decorative scrolls. The “Y” emblem is also repeated above the off-center door.

This building is eligible for individual listing on the NRHP under Criterion C for architecture. It is a rare extant example of an early 20th century neighborhood firehouse in Roseland, has largely retained its original building materials and detailing, and still functions as a firehouse.

Figure 5-5: South Facade of Chicago Fire Department Engine Company 93

Roseland Pumping Station, 351 W. 104th Street

The two-story Prairie style Roseland Pumping Station, designed by architect William G. Kreig in 1911, is clad in brown brick, as shown in Figure 5-6. The building has a high limestone water table, a flat roof, parapet, and two square towers at the corners of the front elevation. The front elevation features a projecting, two-story, flat roofed entrance pavilion with a pair of centrally located glass double doors, sidelights, and a stone panel above that features the City of Chicago's "Y" emblem in metal. The entrance has a smooth stone surround. Above the entrance is a limestone panel incised with the words "City of Chicago Roseland Pumping Station." Detailing on the entrance pavilion includes brick pilasters with stone bases and coping and geometric motifs. The parapet is clad in limestone and features decorative geometric motifs. The building's fenestration is largely composed of multi-paned, steel-sash windows, some of which have transoms.

This is an excellent intact example of a neighborhood pumping station with fine integrity that still functions in its original use. It was identified as individually eligible for the NRHP under Criterion C for architecture, as it stands as an excellent, well-preserved example of a neighborhood pumping station designed in the Prairie style.

Figure 5-6: North Facade of the City of Chicago Roseland Pumping Station

French Eclectic Style Home, 11310 S. Emerald Avenue

This two-story, asymmetrical French Eclectic style house in the Roseland community is clad with brownish-orange face brick. Built circa 1928, it is shown in Figure 5-7. The building has a steeply pitched roof covered with slate, a pair of gabled pavilions along its north elevation, and an L-shaped footprint with a one-story, side-gabled wing that features two flat-roofed dormers. The front elevation of the main block has two first-floor windows that are obscured by metal grates and two through-the-cornice wall dormers with paired casement windows. The recessed front door has a smooth stone surround. A stone-clad, upper-story oriel is at the juncture between the front wing and its adjacent gabled pavilion. Attic windows in the paired gable pavilions are surrounded by stone quoins. Fenestration appears to be mainly casement windows.

This is an unusual example of a French Eclectic style home in Roseland and stands as a visual landmark among the predominant building stock of cottages and bungalows. Although windows appear to be replacements, overall it has very good integrity and is individually eligible for NRHP listing under Criterion C for architecture.

Figure 5-7: North and East Facades of the French Eclectic Home at 11310 S. Emerald Avenue

Romanesque Revival Style Church, 10920 S. Princeton Avenue

This circa 1916 Romanesque Revival style church in the Roseland community has a front elevation and two flanking towers clad with brown face brick, while the remainder of the side elevation and the rear elevation are clad with common brick. Shown in Figure 5-8, the church has a gable roof covered with asphalt shingles and gable wall dormers with shaped parapets on both side elevations. The east tower has a flat roof and a shaped parapet while the west tower has a peaked roof with overhanging eaves and exposed rafters and is topped by a finial. The central bay of the front elevation has a broad, round-arched entrance with a stone surround and two sets of single-light oak double doors. A strip of double-hung windows is within a broad arch and there is a rose window with tracery. Windows on both towers and along the side elevations include round-arch windows with tracery. It is unknown whether the original stained glass for all of these windows is extant inside the church. Both towers also feature paired casement windows. Window openings at the top of the west tower have been boarded over. Detailing includes stone sills, belt courses, brick pilasters, and keystones. A one-story, brick-clad entrance vestibule is along the rear of the west elevation.

Built as the First Reformed Church of Roseland, this church was identified as individually eligible for NRHP listing under Criterion A for its association with the community's once-dominant Dutch population and under Criterion C as a fine example of a Romanesque Revival style church in Roseland.

Figure 5-8: East and North Facades of Church at 10920 S. Princeton Avenue

Bethany Reformed Church Manse, 3 W. 111th Place

This Craftsman house at the southwest corner of 111th Place and State Street sits on a raised basement and is clad with brown face brick. The building has a hip roof covered with asphalt shingles, overhanging eaves with knee braces, and a hip dormer along the 111th Place elevation. Built in 1934, the main block of the house has two additions: a one-story Gothic Revival style east wing with a flat roof and battlemented parapet and a one-story hipped-roof sun porch to the west that is surrounded by double-hung windows. Both wings are also clad in brown face brick. The home's front elevation has a centrally located single-light wood door with sidelights, brick piers, concrete steps with low brick sidewalls, and a flat-roofed wood canopy. The front entrance is flanked on either side by a group of three windows: a picture window flanked by double-hung windows. The second floor of the front elevation features a series of double-hung windows. The front elevation of the Gothic Revival style wing has an off-center metal storm door with slit windows on either side, as well as a picture window flanked by double-hung windows. The door and window group have stone quoins and drip molding. Detailing also includes stone insert blocks.

The residence is identified as individually eligible for NRHP listing under Criterion B due to its association with Reverend Harry J. Hager (1899-1983), a pioneer in media evangelism in Chicago during the mid-20th century. Reverend Hager served as pastor of the adjacent Bethany Reformed Church for 44 years (1929-1975). He was a pioneer in the emerging media ministry, beginning in 1933 with the weekly Bethany Bible Broadcast on the FM station WHIP. Starting in 1944, Reverend Hager's preaching reached a national audience when Chicago's high-powered AM station WCFL began broadcasting his Sunday evening services across America. The manse is shown in Figure 5-9.

Figure 5-9: Front Facade (left) and East Wing (right) of 3 W. 111th Place

Roseland Community Hospital Nurses Home, 11321 S. Wentworth Avenue

Shown in Figure 5-10, this four-story building has a flat roof and parapet. Its symmetrical front elevation is clad with brown face brick and has a centrally located entrance with a glass door and stone surround topped by two stone owls holding books. Windows are non-original one-over-one aluminum sash; those directly above the entrance have stone casings. Detailing includes stone sills, coping, insert blocks, sill courses, cornice, panels, and pinnacles at the parapet level.

This building is locally significant and eligible for NRHP listing under Criterion A for Education. Formerly the Roseland Community Hospital Nurses Home, it was built by the hospital as a dormitory and educational facility for its nurses. Closely affiliated with Roseland Community Hospital, which has served as an important institution in the Roseland area since its establishment in 1924, the Nurses Home is an excellent example of this building type on Chicago's South Side. The exterior of the building has very good integrity and the interior—which now functions as a homeless shelter—appears to retain classrooms and other spaces associated with its original use.

Figure 5-10: Front Facade of Nurses Home at 11321 S. Wentworth Avenue

5.2.2.2 Properties Surveyed but Determined Ineligible

Beyond the properties that were identified as individually eligible for NRHP listing, a number of properties were surveyed that did not meet the criteria. Generally, these properties have had subsequent alterations that compromise their historic integrity or do not feature a level of distinctive architectural detailing necessary to qualify for the NRHP.

5.3 Morgan Park Community

The following subsections include a description of the historic context for the development of the Morgan Park community (**Section 5.3.1**) and an overview of historic properties that were surveyed (**Section 5.3.2**). No NRHP-listed sites or districts fall within the RLE APE in the Morgan Park community.

5.3.1 Historic Context

The community of Morgan Park, approximately 16 miles southwest of Chicago's Loop, is roughly bounded by 107th Street on the north, 115th and 119th Streets on the south, Halsted Street on the east, and California and Rockwell Avenues on the west.

Morgan Park Development in the 19th Century

Morgan Park is named for Thomas Morgan, an Englishman who in 1844 purchased a heavily wooded 3,000-acre tract stretching from the present 91st to 115th Streets on either side of a glacial moraine. The Blue Island moraine remnant, which is roughly 6 miles long and 2 miles wide, is the only high ground within this portion of the lake plain. Morgan built a home at 92nd Street and Pleasant Avenue, in today's Beverly community, and fenced his land for farming, ranching, and hunting (Chicago Fact Book Consortium 1995:210). Other farmers purchased land near the Morgan farm and used the Vincennes Trail along the morainal ridge for access to Chicago.

The transformation of the rural ridge area to a suburban community began in 1869 when the Blue Island Land and Building Company purchased Morgan's property from his heirs and subdivided the land south of 107th Street, between Ashland and Western Avenues, as a subdivision of the Washington Heights community (much of which is Beverly today) to the north (Andreas 1884:639). West of Vincennes Avenue, English landscape architect Thomas F. Nichols designed a series of picturesque, curving streets dotted with parks on behalf of the Blue Island Company (Pacyga and Skerrett 1976:535). This area featured large, deep lots suitable for spacious Victorian homes and evoked the ambiance of an English country town. East of Vincennes Avenue and south of 111th Street, the area was platted with a more typical, rectilinear street grid featuring smaller lots. This section was developed with more modest homes.

The new subdivision benefitted from the 1871 opening of a branch line of the Chicago, Rock Island, and Pacific Railroad, which provided commuter service from Blue Island to downtown Chicago and included a stop at 111th (formerly Morgan) Street. Several important early institutions were established that spurred development in the area. In 1873 the Blue Island Company donated land for the Mt. Vernon Military Academy, which still exists as the Morgan Park Academy, on 111th Street between Hoyne and Bell Avenues. The military academy's headmaster lived in the

house at 2203 W. 111th Street, which was built during the 1870s. Dwight Perkins designed a fieldhouse, located at 2147 W. 112th Street, for the Academy in 1900. The exclusive Chicago Female College was established in 1875, but has been demolished.

In 1877 the Blue Island Company convinced the Baptist Union Theological Seminary to move to Morgan Park from the Douglas area of Chicago. By 1879 its well-regarded faculty included William Rainey Harper, who later became the first president of the University of Chicago (Keating 2008:216). The seminary was located near the present day intersection of 111th Street and Western Avenue, a block west of the Morgan Park Academy. According to an early guidebook, the seminary, together with the Morgan Park Military Academy and the Chicago Female College, “formed the chief attraction of the place” (Pacyga and Skerrett 1976:536). Morgan Park received its first Baptist Church in 1874 at 110th Street and Bell Avenue (replaced by a new church begun in 1896). With the arrival of the Baptist Union Theological Seminary in 1877, Morgan Park Baptist Church became one of the most powerful institutions in the community.

During these early years, the Blue Island Company sponsored land auctions and advertised in Chicago newspapers and building journals. An 1889 publication of Morgan Park boosters noted that the village was “much superior to other localities” because it was “near enough to Chicago and sufficiently far removed to afford all the blessings of a Suburban Home with all the conveniences and advantages of the city, far from all its objectionable features.” The scenery was an added attraction. Set on a ridge 100 feet above Lake Michigan, it was claimed to be in “semi-mountainous” country, on “the oak-shaded heights of the Blue Island plateau” (Mayer and Wade 1969:170).

Italianate mansions from the early 1870s are located along the ridge at 11347 S. Lothair Avenue and at 11410 S. Longwood Drive. More modest houses from the same period include those at 10934 S. Prospect Avenue, 10970 S. Prospect Avenue, and 2204 W. 111th Street. Reflecting its origins as a Baptist community, Morgan Park prohibited the sale of liquor in the area between Western and Vincennes Avenues when it was incorporated as a village in 1882. Its middle-class character was further reinforced by the construction of other mainline protestant churches, among them Methodist (1888), Episcopalian (1889), Congregational (1890), and Presbyterian (1891), rivaling in size and influence the earlier Morgan Park Baptist Church (Keating 2008:217). For decades, village life centered on its churches; Morgan Park developed a reputation as a temperance town.

Prospect Avenue became Morgan Park’s most fashionable street during the 1880s and 1890s, although elaborately designed homes were also built on nearby streets. Examples of the Queen Anne style include an 1888 house at 10920 S. Oakley Avenue and an 1892 house at 11156 S. Longwood Avenue. Local architect Harry Hale Waterman developed a distinctive picturesque style, exemplified by houses at 10838 S. Longwood Drive (1892) and 2023 W. 108th Place (1894). Among those who built homes in the village were executives of the Rock Island line, the Chicago stockyards, and the Chicago Bridge and Iron Company, which opened in 1889 on nearby Vincennes Avenue.

By the late 1880s, 2,800 people lived in Morgan Park (Chicago Fact Book Consortium 1995:210) and the community received regular commuter service to downtown Chicago via the Rock Island Railroad's branch commuter line, the tracks of which were situated to the west of the railroad's main line. Monterey Avenue became the community's commercial center, concentrated around the railroad's Queen Anne style depot at the intersection of 111th Street and Hale Avenue (1890). The year 1890 also saw the completion of Esmond Public School, a substantial three-story, brick edifice at the intersection of Montvale and Home Avenues, and the Walker Library at 11071 S. Hoyne Avenue. The Walker Library was donated by George C. Walker, President of the Blue Island Land and Building Company, and designed in the Richardsonian Romanesque style by noted Chicago architect Charles Frost.

Despite these clear signs of growth, Morgan Park lost its bid to become the home of the University of Chicago, which settled in Hyde Park. After the Baptist Theological Union left Morgan Park in 1892, its buildings were used by Morgan Park Military Academy. During the 1890s The Budget, a local newspaper, advocated streetcar connections with nearby communities as the way to build up Morgan Park. Although service along Vincennes Avenue began in 1896, Morgan Park and its twin community of Beverly to the north remained isolated from the expanding city (Pacyga and Skerrett 1976:537).

Morgan Park Development: 1900 to 1950

The battle over annexation to Chicago, which began in 1911, sharply divided the community and dragged on in court until 1914, finally passing with a margin of only 15 votes (Chicago Fact Book Consortium 1995:210). The building boom that occurred in Morgan Park between 1910 and 1930 reinforced earlier patterns of settlement and the community remained suburban in character. No saloons, factories, or businesses were allowed along the ridge, and developers took care to remove "only trees that actually interfere with building" (Pacyga and Skerrett 1976:539). The community lacked industry, major commercial thoroughfares with heavy traffic, and recreational amenities such as movie palaces or dance halls. Community leaders believed that streetcar lines threatened the exclusivity of the area and consequently streetcars were not extended along Western Avenue to Morgan Park until the 1930s.

Morgan Park's small town character remained appealing to many, and residential growth increased as existing subdivisions were re-divided and new subdivisions were platted west of Western Avenue and south of 115th Street. The Classical Revival style Morgan Park High School opened in 1916 at 111th Street and Vincennes Avenue. The community's growing population, which increased from 7,780 to 12,747 between 1920 and 1930 (Keating 2008:216), necessitated a high school addition in 1925 that featured a new gymnasium, auditorium, and natatorium. Monterey Avenue remained the community's commercial center during this period, although retail strips along 95th Street to the north and along Michigan Avenue to the east, in the Roseland community, also attracted shoppers.

Many of the homes erected during the early 20th century reflected the popular Craftsman style of the period, which was used for both frame bungalows and American Foursquare homes. Builders constructed brick Chicago Style Bungalows as well as more elaborate homes in a variety of

historical styles, with Tudor and Colonial Revival being especially popular. Although a few apartment buildings were erected, Morgan Park remained primarily a community of single-family homes.

During the 1920s Longwood Drive emerged as the area's most prestigious street, eclipsing Prospect Avenue as the main north-south thoroughfare. Many elaborate homes were also built along Hoyne Avenue between 111th and 112th Streets. Sidewalks, shade trees, and carefully tended lawns enhanced Morgan Park's high quality housing. Longwood Drive was also the setting for several prominent churches including the brick Gothic Revival style Morgan Park Methodist Church at 11030 S. Longwood Drive. Built in 1913 and designed by Henry H. Waterman, the church received a 1927 addition designed by Dwight Perkins. A Gothic Revival style stone Presbyterian Church was designed by Anders Lund and erected at 11052 S. Longwood Drive in 1933.

Whereas Morgan Park's Protestants tended to live and worship in the oldest part of the neighborhood, in 1904 a small community of French immigrant Roman Catholics established Sacred Heart Church at 11652 S. Church Street. The largely Irish Roman Catholic parishes of St. Cajetan at 2445 W. 112th Street (1927) and St. Walter at 11722 S. Oakley Street (1953) drew most of their congregations from the area west of Western Avenue.

Morgan Park was also home to a small but growing middle class African-American community during this period, which had established itself in the area between Vincennes Avenue and Halsted Street in the late 19th century. In 1921 the Chicago Commission on Race Relations reported that whites and blacks in Morgan Park "maintain a friendly attitude," but it also noted "there seems to be a common understanding that Negroes must not live west of Vincennes Road" (Pacyga and Skerrett 1976:540). Public institutions such as the Morgan Park High School and the Walker Branch Public Library, however, were integrated. The African-American population in Morgan Park increased from 12 percent in 1920 to 35 percent in 1930. Other residents were mostly of English, German, Swedish, and Irish descent, with only a small proportion of foreign-born residents (Chicago Fact Book Consortium 1995:210).

Morgan Park Development: 1950 to Present

Morgan Park experienced a residential building boom following World War II as the community developed areas along its fringes and subdivided some of the large lots in the older area of the community for single-family homes. The community maintained a stable residential population and continued to be "dry," a prohibition demanded by early Baptist settlers and upheld by Catholic newcomers. By 1960 an increase in the number of Irish residents made them the predominant group, followed by those of German, English, and Swedish descent. The South Side St. Patrick's Day parade down Western Avenue, organized in 1979, has become a symbol of the large Irish population and the Catholic presence in the ridge area that stretches north to the neighboring Beverly community.

The Morgan Park Military Academy dropped the military aspect of its program in 1950 and is today a private coeducational grammar school and high school that attracts students from all over the South Side of Chicago and neighboring suburbs. Monterey Avenue remained the business

center of old Morgan Park until the 1970s. After urban renewal, all that remain of the former commercial district are the post office, police station, train station, and a few stores west of Hale Avenue.

During the late 1960s the I-57 Expressway had effectively isolated the older black settlement east of Vincennes Avenue. Between 1960 and 1970 Morgan Park's population peaked at more than 31,000 due to an over 50 percent increase in the number of African-Americans (Chicago Fact Book Consortium 1995:210). Perhaps the greatest change to Morgan Park's urban landscape involved the construction of nearly 400 "Section 235" subsidized housing units between 1969 and 1974, the largest number built in any Chicago neighborhood. Most of these homes—which were modern versions of the 19th-century workers cottage—were built along Vincennes Avenue, south of Morgan Park High School (Pacyga and Skerrett 1976:544).

During the 1970s the Beverly Area Planning Association, comprising civic groups from both Morgan Park and neighboring Beverly, succeeded in halting panic peddling by unscrupulous real estate dealers to avoid the rapid racial turnover experienced by other Chicago South Side neighborhoods. As a result, by the mid-1970s home values in both communities had stabilized and began to rise. The African-American population rose to 63 percent in 1980 and then slowed. Today Morgan Park has both integrated and racially segregated areas: the population east of Ashland is nearly all black; the population west of Western Avenue is nearly all white; and the area in between is mixed (Chicago Fact Book Consortium 1995:210).

Residents of both Morgan Park and Beverly began to jointly promote their shared architectural heritage of historic homes along the ridge through the leadership of the Beverly Area Planning Association, which sponsored home tours that continue to attract thousands of Chicagoans each year. The establishment of the Ridge Historical Society in 1971 sparked an interest in the past of Morgan Park and Beverly with its museum at 10616 S. Longwood Drive. The Society has identified landmark homes throughout the area over the past several decades and established an oral history program and archives.

Today Morgan Park's winding, tree-shaded streets display a rich array of residential architecture. The Ridge Historic District, listed on the NRHP in 1975, is centered on Longwood Drive, running from 87th to 115th Streets and linking the center of Morgan Park to the Beverly community area to the north. In 1981 the Longwood Drive District became a designated City of Chicago landmark district. This narrow, 12-block-long district extends along Longwood Drive between 98th and 110th Streets and also along Seeley Avenue between 102nd and 107th Streets. Both districts feature intact collections of homes dating from the 1870s through the 1920s that display a wide variety of architectural styles including the Italianate, Queen Anne, Tudor Revival, Colonial Revival, French Provincial, Craftsman, and Prairie. Morgan Park remains a stable, largely integrated, middle-class neighborhood that boasts the Beverly Arts Center's complex for the performing arts, which was built in 2002 at 2407 W. 111th Street and has sparked redevelopment at the intersection of 111th Street and Western Avenue.

5.3.2 Surveyed Resources

As part of the fieldwork for the RLE Project, 13 buildings within the Morgan Park portion of the APE were surveyed. These properties, along with their construction date and an assessment of their eligibility for listing on the NRHP, are presented in Table 5-3, alphabetized by street name. No properties were determined individually eligible. A series of maps in Appendix A graphically presents these findings; individual inventory sheets for surveyed properties are presented in Appendix B.

Table 5-3: 13 Surveyed Properties in Morgan Park

Address	Year Built	Description	Eligibility
808 W 111th Street or 11050 S. Halsted Street	1982	Commercial	Modern
10701 S. Green Street*	1950	Single-Family	Not Eligible
10757 S. Green Street*	1947	Single-Family	Not Eligible
10829 S. Green Street*	1948	Single-Family	Not Eligible
10901 S. Green Street*	1948	Single-Family	Not Eligible
11001 S. Green Street	1942	Single-Family	Not Eligible
11039 S. Green Street	1942	Single-Family	Not Eligible
11121 S. Green Street	1959	Multi-Family	Not Eligible
11247 S. Green Street	1950	Single-Family	Not Eligible
11359 S. Green Street	1951	Single-Family	Not Eligible
11038 S. Halsted Street	1977	Commercial	Modern
11200 S. Halsted Street	1925	Commercial	Not Eligible
11320-11322 S. Halsted Street	1962	Modernistic Mixed-Use Building	Not Eligible

* Surveyed property within proposed Green Street Historic District

Of the 13 buildings surveyed within the Morgan Park portion of the RLE APE, none were identified as eligible for listing on the NRHP. Generally, these properties have had alterations that compromise their historic integrity or do not feature a level of distinctive architectural detailing necessary to qualify for the NRHP. A portion of the Green Street Historic District, which was identified as NRHP eligible, falls within the Morgan Park community. A description of the resource is presented in **Section 5.1.2.1**.

5.4 West Pullman Community

The following subsections include a description of the historic context for the development of the West Pullman community (**Section 5.4.1**) and an overview of historic properties that were surveyed (**Section 5.4.2**). No NRHP-listed sites or districts fall within the RLE APE in the West Pullman community.

5.4.1 Historic Context

The West Pullman community, approximately 16 miles south of Chicago's Loop, is bounded by 115th Street to the north, 123rd Street and the Little Calumet River to the south, Front Street and railroad tracks to the east, and Ashland Avenue, Halsted Street, and Morgan Street (city limits) to the west.

West Pullman Development in the 19th Century

The first settlers in the area known as West Pullman were civil engineer and land surveyor David Andrews and his wife Caroline, who married in 1840 and established a 360-acre farm near the northeast corner of the future community. The couple only had two neighbors who were about 3 miles away, and at that time, "prairie wolves, deer, and prairie chickens abounded, and occasionally a lynx was seen" according to A. T. Andreas in his *History of Cook County* (1884:603). The first signs of change arrived in 1852, when the Illinois Central and Michigan Central Railroad companies established the Calumet Station at the present intersection of 115th Street and Cottage Grove Avenue. A settlement grew slowly around the Calumet Station and came to be called Kensington. It initially consisted of a general store and saloon at the corner of Front Street and Kensington Avenue, wood shanties, and a boarding house inhabited by men working on freight handling for the railroads.

Kensington became part of the Village of Hyde Park in 1867. Ten years later, the small community comprised only about 20 houses; however, Kensington's population would soon more than quadruple, from 250 in 1880 to 1,280 in 1883. This sudden growth was due to the establishment of the Pullman Palace Car Factory as well as other industries, such as the Chicago Forge Company Works at 116th Street and Cottage Grove Avenue. Kensington's boundaries came to encompass the area bounded by 115th and 125th Streets, between State Street and the Illinois Central tracks. Some of the more prominent residents who arrived in the community during this decade were from the East Coast. They included native New Yorkers Thomas Gaines, proprietor of the Gaines Hotel, A. Burchard, a physician who established a large medical practice in the community, and various other merchants who created commercial enterprises (Andreas 1884:604-606).

In 1881, the Gano Company of Cincinnati purchased and subdivided a large tract of land that was part of Calumet Township, just west in Kensington. This subdivision, then called Gano, extended from 115th Street to 119th Street, between State Street and Wentworth Avenue. In 1888, the Village of Gano was organized and withdrawn from control of Calumet Township. The new village extended from 115th Street to the Little Calumet River, between State and Halsted Streets, but was only very sparsely settled along its eastern portion. The area beyond the initial Gano subdivision boundaries comprised open prairie and farmland, including what would become the West Pullman residential district. Kensington was annexed to Chicago in 1889 and Gano's need to secure municipal services led its residents to seek annexation the following year (Chicago Fact Book Consortium 1995:161).

The name West Pullman came to the current community area in the 1890s following the West Pullman Land Association's November 1891 purchase of 480 acres of farmland that encompassed

much of the former Village of Gano (West Pullman Land Association 1900:3). This initial parcel was between 119th and 123rd Streets, from Wentworth Avenue to Halsted Street. By January 1893, the Land Association purchased additional tracts of undeveloped land that extended their original holdings west to Ashland Avenue, between 115th and 123rd Streets. The land was platted to include an industrial district west of Halsted Street, workers' housing in the center with a commercial strip along Halsted Street, and a district called Stewart Ridge for the "finer class of residence" to the east. The Association aimed to create an industrial village to rival and even surpass the already established town of Pullman to the northeast, as was clear by the comments made by director H. D. Patton at a May 17, 1893 groundbreaking for the Whitman and Barnes Company:

"You are in the center of what will be the greatest manufacturing district in the world, and I predict that in time this suburb will outgrow the beautiful citadel to the east, that it will eventually be known as east Pullman and this place will take the parent name (*Chicago Tribune* 1893c)."

Whitman and Barnes, whose large facility encompassed 19 buildings, was one of two manufacturers of agricultural implements that moved to West Pullman in 1893. The other was the Plano Manufacturing Company, which relocated from Plano, Illinois to a sprawling facility on its 25-acre tract in West Pullman. The *Chicago Tribune* (1893b) estimated that Plano Manufacturing would employ 1,500 workers. Other early industries located in West Pullman's factory district by 1893 were the Illinois Electrical Forging Company, the White and Ballard Shoe Company, the Burgland & Sheal Woodenware Company, and the West Pullman Lumber Company. They were joined by the end of the decade by others including the Chicago Malleable Casting Company, the Chicago Pail Company, the Inglis Photographic Supply Company, the Phoenix Boot and Shoe Company, and the Chicago Brass Bed Factory (West Pullman Land Association 1900:8-9).

The West Pullman Land Association had phenomenal success in attracting both industry and workers to its industrial village at the southern outskirts of Chicago due to a range of transportation improvements. The Illinois Central constructed its Blue Island Branch westward along 121st Street and located three stations within West Pullman, including one in the midst of the Stewart Ridge residential district, one at Halsted Street, and one within the factory district. The Pittsburg, Cincinnati, Chicago & St. Louis (known as the Pan Handle of the Pennsylvania railway system) already crossed the property from north to south and established passenger and freight stations at 119th and 120th Streets. The Chicago, Rock Island & Pacific Railway Company arriving from the west established its freight station at Morgan and 119th Streets. The Land Association constructed and controlled a terminal railway system connecting these three trunk lines to ensure they reached all parts of the factory district. The Illinois Central's passenger service from West Pullman ran an express train north to 67th Street that reached the Loop in 38 minutes. Additional passenger service along Michigan Avenue was provided by the Calumet Electric Railway, which was extended south from 115th Street to 119th Street and then westward along 119th Street to Halsted in 1893 (West Pullman Land Association 1900:8-9, 16; *Chicago Tribune* 1893a). West Pullman was annexed to the City of Chicago in 1895.

Many executives of the West Pullman Land Association and of the community's various industries resided in the community's Stewart Ridge district, which was about a mile east of the factory district, around the Illinois Central's station at the intersection of Stewart and 121st Streets. Streets on either side of Stewart, such as Harvard and Princeton Avenues to the east and Eggleston and Normal Avenues to the west, featured large, architect-designed homes of various styles built between the 1890s and the early 1900s. The homes at 12134 S. Eggleston Avenue (1896), 12112 S. Normal Avenue (1895), and 12021 S. Stewart Avenue (1896) are representative of this period of development.

Outside the Stewart Ridge district, 19th century residential development throughout West Pullman—including the earlier Kensington and Gano communities of the 1880s—featured workers' housing with modest one- to two-story, gable-roof, frame cottages and homes. An Italianate style home at 605 W. 116th Street (1880s) is among the extant homes from West Pullman's earlier period of development. By 1893 the West Pullman Land Association had built nearly 300 speculative homes and also had sold lots to individuals and builders, providing for some variety in the stock of workers' homes erected during this decade of rapid growth. A promotional booklet developed by the Land Association wrote that this area provided "every opportunity for cheap, good and contented living," noting the following:

"The property there is of low price, ranging from \$350 to \$500 per lot; and if a home-seeker lacks either the means or the inclination to build, a company having capital and surplus of \$200,000 and especially organized for this purpose, stands ready to construct such a home as may be desired, to be paid for on the monthly installment plan (West Pullman Land Association 1900:24)."

Nineteenth-century workers who flocked to West Pullman's newly established industries were a multi-ethnic mix of French, Dutch, Swedish, Irish, and German immigrants who established their own churches and parochial schools. These included St. Louis de France Church (later called St. Ambrose), established by the French community in the 1880s at 117th and State Streets; the Irish St. Catherine of Genoa Church at 118th and Lowe Streets (founded 1890s); the Polish St. Salomea Catholic Church at 118th Street and Indiana Avenue (founded 1890s); and the Norwegian Nazareth Lutheran Church at the corner of 118th and Yale Streets (founded 1890s). Two large public schools were also built in West Pullman during the 1890s for its rapidly growing population: the Romanesque Revival style West Pullman School at 11919 S. Parnell Avenue (1894) and the Classical Revival style Thomas Scanlon School at 11721 S. Perry Avenue (1897; now the Songhai Learning Institute); both feature Classical detailing.

West Pullman residents were served by community commercial districts that sprang up along Michigan Avenue, between 115th and 119th Streets to the east, and around the intersection of 119th and Halsted Streets to the west. Historic photos show that 19th century commercial buildings erected in these areas were typically one to three stories in height, mainly faced in brick, with storefronts on the ground level and apartments above. Detailing was restrained and included stone lintels and sills, storefront surrounds of stone or terra cotta, and stone or metal cornices or

parapets. Most of the commercial buildings were not designed in a specific architectural style, but often included details from a style such as the Queen Anne, Romanesque, or Classical Revival.

An 1893 *Chicago Tribune* article that discussed a tour of West Pullman by a number of dignitaries noted, “Halsted Street is the principal business thoroughfare, and considerable favorable comment was indulged in at the amount of business now carried on and the number of business blocks that have been built since the suburb sprang into existence a year ago” (1893c). Another article from the same year that highlighted the construction of a new commercial block at the corner of 119th Street and Lowe Avenue reported, “There is demand for business houses, and especially for hotels and boarding houses, to accommodate the increasing population” (*Chicago Tribune* 1893d). The Enright Block at the corner of Emerald Avenue and 120th Street was “rapidly filled with businesses: a tailor store, grocery, printing office, bakery, and millinery store being among the number” (*Chicago Tribune* 1893e).

West Pullman Development: 1900 to 1950

The early 20th century brought a wave of Eastern European immigrants that included Lithuanians, Poles, Hungarians, Armenians, and Czechoslovakians. After World War I, many Italians arrived. These new residents built their own churches and ethnic institutions, and in some cases older groups expanded their existing institutions. In 1903 the Italian community built the Renaissance Revival style St. Anthony of Padua Church at 11153 S. Prairie Avenue.

The Lithuanian community built S.S. Peter and Paul Catholic Church at 123rd Street and Emerald Avenue in 1914 (now St. Titus Missionary Baptist Church), which features Romanesque Revival style detailing. In 1928 the Irish parish of St. Catherine of Genoa replaced its earlier church with a Renaissance Revival style edifice at the corner of 118th Street and Lowe Avenue, and also added an elementary school and convent during this period.

West Pullman saw the erection of two church complexes—Assumption of the Blessed Virgin Mary and St. Salomea—built by its large Polish community in the early 20th century. The Assumption Blessed Virgin Mary Society, which had been founded in 1895, built a frame church in 1904 at 123rd Street and Parnell Avenue. In 1907, the parish built a brick rectory at 544 W. 123 Street and converted its old rectory at 12240 S. Parnell Avenue into classrooms. A convent was built at 12242 S. Parnell Avenue in 1919 (now demolished) and 4 years later, a brick church/school building was erected at 12238 S. Parnell Avenue to accommodate the needs of the rapidly growing parish (now Glory to the Holy Family Baptist Church). At that time, the former frame church was remodeled as a parish hall (now demolished) (Polish Genealogical Society of America 2012). In 1911, St. Salomea parish built an imposing Gothic Revival style church at the corner of 118th Street and Indiana Avenue in West Pullman’s Kensington neighborhood and also erected an adjacent rectory and elementary school.

Corporate officers continued to reside in the Stewart Ridge district, where larger than average homes of varying styles continued to be built through the early 1900s. The most notable home in this district was designed by Frank Lloyd Wright for Stephen A. Foster, a director of the West Pullman Land Association (1900). The Stephen A. Foster House and Stable at 12147 S. Harvard

Avenue, a designated Chicago landmark, shows Wright's interest in Japanese architecture during the years he was developing his Prairie style (Chicago Historical and Architectural Landmarks 1996). The Queen Anne style home at 12225 S. Harvard Avenue (1905) and the Colonial Revival style home at 12204 S. Stewart Avenue (1903) are representative of this period in the Stewart Ridge neighborhood's development.

The West Pullman Land Association went bankrupt in 1908 during an economic downturn, but residential development continued sporadically with mainly gable-roofed frame cottages, Craftsman style bungalows, and some multi-family two-flats and small apartment buildings. The community received an important recreational amenity with the establishment of the 15-acre West Pullman Park in 1915. The park—which extends from 123rd to 124th Street, between Princeton and Normal Avenues—included tennis courts, baseball diamonds, and a one-story brick field house that offered a range of civic education and social welfare programs in its early years.

In 1920, West Pullman had a population of 23,019 and still featured large areas of undeveloped land. This was to change during the citywide construction boom of the 1920s, during which vacant parcels throughout the community were improved with bungalows and two-flat residential buildings in frame and brick, homes designed in the popular American Foursquare style, and small brick apartment buildings. By 1930 West Pullman's population reached 28,000. Commercial streets continued to develop with buildings such as the Classical Revival style State Bank of West Pullman at 622 W. 120th Street (1919; John Hetherington), now Lively Stone Apostolic Church. In 1927–28, two additional parcels of industrial land along the Calumet River were annexed to Chicago, completing the land area of the present West Pullman community (Chicago Fact Book Consortium 1995:161). Many developers of new subdivisions in the community placed restrictions on their property that prohibited its purchase by African-Americans, contributing to a concerted effort among residents to keep Pullman white. Some employers hired only white workers; International Harvester refused to hire African-Americans at its West Pullman works until mandated to do so during World War II (Keating 2008:298-299).

West Pullman Development: 1950 to Present

West Pullman's population rose from 29,000 in 1950 to 35,000 in 1960, a period in which Poles, Italians, and Germans predominated among the whites who constituted nearly 100 percent of the community's population (Chicago Fact Book Consortium 1995:161). Vacant lots throughout the community and along its undeveloped southern and western edges were improved during the post-War period with suburban style tract homes and split-level homes. Duplexes were also built, especially on the south, north, and west sides of the factory district. Starting in the 1960s, some of the vacant land on West Pullman's western edges, such as the Maple Park subdivision, finally opened to African-Americans. Gradually, African-Americans began moving into other West Pullman neighborhoods, although racial turnover in the next decade was accompanied by brewing social unrest. By 1980, 90 percent of West Pullman's 45,000 residents were African-American. This figure rose to 94 percent by 1990 (Chicago Fact Book Consortium 1995:161).

The collapse of the South Side's industrial base, starting in the 1970s, led to a rapid decline of West Pullman's economic fortunes. Industries such as the Pullman Company, Wisconsin Steel, International Harvester, and Dutch Boy Paint Company that once hired numerous West Pullman residents closed their doors. Other industries such as Carl Buddig and Ingersoll Products dramatically reduced their work forces. Layoffs and plant shutdowns made it difficult for many residents to continue payments on their homes, which had been acquired through loans from HUD. After owners defaulted, many HUD homes were foreclosed. By 1982 the Greater Roseland Organization began rehabilitating HUD homes in the northeastern area, where the housing stock is the oldest. Continued depressed economic conditions during the 1980s contributed to the demolition of 450 homes by the end of the decade (Chicago Fact Book Consortium 1995: 161). In 1985 West Pullman received a major new institution when Christ Universal Church was built on a 32-acre parcel at 119th Street and Ashland Avenue. (Buursma 1985).

By the 1990s West Pullman's once thriving industrial district west of Halsted Street featured large tracts of vacant land, blighted or underutilized buildings, deteriorated infrastructure, and substantial environmental contamination, which served as major impediments to redevelopment and new industrial investment. In response to this situation, in 1998 the City of Chicago created the 220-acre West Pullman Industrial Park TIF, which aims to foster the area's revitalization through site assembly efforts, soil remediation projects, and numerous infrastructure improvements. The TIF District also supports job training and relocation costs (Friedman & Co. 1997:1).

Some important developments within the West Pullman Industrial Park TIF District boundaries since its designation include the redevelopment of a 39-acre brownfield parcel around the 1000 block of 120th Street—formerly the home of International Harvester's West Pullman Works and the Dutch Boy Paint factory—as a solar energy facility by Chicago-based Exelon and SunPower, a California energy company. Opened in 2010, the parcel is the largest urban solar panel plant in the nation, capable of providing electricity for as many as 1,500 homes. Just a couple of blocks east of this ambitious project is the new West Pullman Branch of the Chicago Public Library at 830 W. 119th Street. Perhaps the most important project in terms of its direct effect on a large number of residents is the \$160 million Ray and Joan Kroc Community Center, which opened in 2012 on a 33-acre site at 1250 W. 119th Street. The multi-purpose center features an aquatic center, a performing arts center, a soccer field, and other recreational activities, as well as job training classes (Bryne 2012).

Adjacent to the West Pullman Park Industrial TIF District is the 183-acre 119th/Halsted TIF District, which was designated by the City of Chicago in 2002. The TIF District includes the stretch of Halsted Street from 113th to 123rd Street, as well as stretches of 119th, 120th, and 121st Streets east of Halsted Street. The area encompassed by the 119th/Halsted TIF District consists of commercial, residential, industrial, and mixed-use property. It also includes Metra's electric rail commuter line along 121st Street with a commuter station on Halsted and 121st Streets. By the 1990s, this area was characterized by blighted and vacant buildings and large amounts of vacant land created through building demolition. The TIF District aims to foster a viable business district along Halsted Street at its intersections with 115th and 119th Streets, while promoting the

development of affordable rental and for-sale housing along portions of 119th and 120th Streets. The TIF District also supports the creation of a pedestrian/bike trail along the former Penn Central Railroad ROW, which was purchased by the Chicago Department of Transportation (Camiros, Ltd. 2001, 2003:5-6, 15).

Small portions of land along West Pullman's western edge are included within the 119th/I-57 TIF District designated by the City of Chicago in 2002 to enable new development at key sites within the Morgan Park community. The West Pullman portions of this TIF District include 111th Street between Ashland and Racine Avenues, and the parcel roughly bounded by 119th and 123rd Streets, between Ashland Avenue and Loomis Street. Homeowners within both the 119th/Halsted TIF District and the 119th/I-57 TIF District are eligible for home repair grants through the City's TIF District-Neighborhood Improvement Program, which is administered through HUD. In recent years, new homes have been built along West Pullman's western edge near Christ Universal Church, including a gated community called Renaissance Estates in the Victory Heights neighborhood.

5.4.2 Surveyed Resources

As part of the fieldwork for the RLE Project, 172 buildings within the West Pullman portion of the APE were surveyed. These properties, along with their construction date and an assessment of their eligibility for listing on the NRHP, are presented in Table 5-4, alphabetized by street name. Properties determined individually eligible are highlighted. A series of maps in Appendix A graphically present these findings; individual inventory sheets for surveyed properties are presented in Appendix B.

Table 5-4: 172 Surveyed Properties in West Pullman

Address	Year Built	Description	Eligibility
1 W. 115th Street	1907	Queen Anne Style Mixed-Use	Not Eligible
17 W. 115th Street	1897	Greystone Flat	Not Eligible
23 W. 115th Street	1883	Single-Family (vacant)	Not Eligible
35 W. 115th Street	1936	Commercial	Not Eligible
143 W. 115th Street	1911	Single-Family	Not Eligible

5.4.2.1 Resources Eligible for National Register of Historic Places

Of the 172 buildings surveyed within the West Pullman portion of the RLE APE, 4 were identified as eligible for listing on the NRHP. These are described briefly below.

Galloy & Van Etten Stone Contractors, 11756 S. Halsted Street

This two-story light industrial building in the West Pullman community was built in 1931 and is home to the Flagstone Veneer Stone/Galloy & Van Etten Inc. Cut Stone Contractors business. The building has a one-story wing at its south end; both the main building and wing have flat roofs. A line of buttresses divides the building's long Halsted Street elevation into a series of 13 bays; large windows have all been filled in with synthetic materials. One of these bays features an overhead garage door. The front (south) elevation of the one-story office wing has a hollow-core metal door with a filled in transom, three non-original one-over-one aluminum-sash windows, and two large window openings filled with concrete block. An additional flat-roofed one-and-a-half-story wing is situated along the rear of the main building block. Its west elevation features a series of windows and overhead doors. Detailing includes concrete stringcourses and applied letters.

Shown in Figure 5-11, this industrial building is eligible for NRHP listing under Criterion A for Industry. Dutch immigrant Abram Van Etten and his partner George Galloy established the stone fabricating company in 1899. It has been in operation at its current location for nearly 100 years. Located in a community that experienced a collapse of its industrial base in the 1970s and considerable disinvestment since that time, the building serves as an important and rare example of an early 20th century industrial building in West Pullman that retains its original use and ownership. It retains the majority of its original materials with the exception of fenestration along Halsted Street, where it appears that the windows have either been covered or removed.

Figure 5-11: South Facade of Galloy & Van Etten Industrial Building

Fire Department Engine Company 115, 931 W. 120th Street

This two-story firehouse in the West Pullman community was built circa 1897–1911 and has a flat roof and parapet. The building is shown in Figure 5-12. The front elevation is clad in brown face brick and has a centrally located overhead metal door flanked by single one-over-one windows on the first floor. Four non-original one-over-one windows are on the second floor. The overhead opening for the station's fire truck features a Classical stone surround with Ionic columns atop low pedestals, a frieze band incised with the words "Fire Department," and a pediment. Detailing includes a circular motif in stone, stone sills, sill courses, and a metal cornice. This is an excellent example of a neighborhood fire station that still functions in its original use and has very good integrity. It is individually eligible for listing on the NRHP under Criterion C.

Figure 5-12: East Facade of Fire Department Engine Company 115 at 931 W. 120th Street

S.S. Peter & Paul Roman Catholic Church, 12433-12439 S. Halsted Street

This Mid-Century Modern church at the northeast corner of 125th and Halsted Streets in the West Pullman community was built in 1958 for the parish of Saints Peter and Paul. Shown in Figure 5-13, the church is clad with orange face brick and stone veneer. The building has a steeply pitched gable roof, deep roof overhangs along the front elevation, and a square hip-roofed corner tower with a vertical strip of leaded glass windows. The front elevation has a central pavilion flanked by projecting full-height brick piers, three sets of original double doors divided by concrete piers and topped with a concrete spandrel with incised lettering that reads “S.S. Peter and Paul,” and an expansive area above which is glazed with leaded glass. The side elevations feature a series of narrow windows that appear to be double-hung.

This building was identified as individually eligible for NRHP listing under Criterion C for architecture as an excellent and rare example of a Mid-Century Modern church in West Pullman.

Figure 5-13: South Facade of S.S. Peter & Paul Catholic Church at 12433-12439 S. Halsted Street

Venetian Hall, 133–139 E Kensington Avenue

The two-story performance hall was built for cultural and recreational purposes, although it has long since been repurposed as a church. The 1938 Sanborn map shows the hall with a stage, balcony, and place for storage of scenery. The street entrance was flanked by two storefronts in 1938, as it is today.

Shown in Figure 5-14, the 1925 building is clad with face brick on its front elevation and common brick on its side and rear elevations. The building has a flat roof and a shaped parapet with concrete coping. The first floor of the front elevation has a recessed, centrally located bay with three pairs of multi-light wood doors and in-filled transoms. This central bay is flanked by two original storefronts with central recessed doors and flanking display windows that are covered with wood and topped by transoms that have been filled in with glass block. Separating the central bay from the two flanking storefronts and providing access to the second floor are two doors with transoms. The spandrel area directly above the central entrance bay has a concrete sign plate with incised lettering that reads “Venetian Hall.” Fenestration on the second floor features six-over-one and three-over-one wood-sash windows arranged in pairs and in groups of three, topped by round-arch stone lintels with rosette motifs. The parapet features a series of Classical shields and swags.

Figure 5-14: Front Facade of Venetian Hall

The exterior of this building has good overall integrity, although elements of the original storefront materials are no longer extant. It does not display sufficient distinguishing architectural features to qualify as individually eligible for listing on the NRHP for its architecture. Instead, is recommended for individual listing under Criterion A for its original use

as a social venue for area residents in the early 20th century. Local theater houses such as the Venetian Hall were jewels within the local communities. It is rare to see an early 20th century neighborhood social hall that retains its original storefronts and is set within a residential area of workers' housing, rather than along a commercial thoroughfare. The opening of Illinois Terra Cotta Works in the first half of the 20th century brought Italians to Kensington; the area gradually became a center of South Side Italian-American life with the establishment of Venetian Hall and the nearby San Antonio de Padua (patron saint of Venice) Roman Catholic Church.

5.4.2.2 Properties Surveyed but Determined Ineligible

Beyond the properties that were identified as individually eligible for NRHP listing, a number of properties were surveyed that did not meet the criteria. Generally, these properties have had subsequent alterations that compromise their historic integrity or do not feature a level of distinctive architectural detailing necessary to qualify for the NRHP.

5.5 Riverdale Community

The following subsections include a description of the historic context for the development of the Riverdale community within Chicago (**Section 5.5.1**) and an overview of historic properties that were surveyed (**Section 5.5.2**).

5.5.1 Historic Context

The community of Riverdale—distinct from the adjacent Village of Riverdale to the southwest—is approximately 16 miles south of Chicago's Loop. It is bounded by the Bishop Ford Expressway (I-94) on the east, the Illinois Central Railroad on the west, 115th Street on the north, and the Chicago city limits (138th Street) on the south. The northern two-thirds of the community is occupied by rail yards, industry, and the Calumet Sewage Treatment Plant, while residential development is concentrated south of 130th Street and east of Indiana Avenue.

Riverdale Development in the 19th Century

The earliest settler in the Riverdale area was George Dolton, who arrived with his wife and seven children in 1835. He was joined near the banks of the Little Calumet River by several other pioneers over the next few years, including J. C. Matthews. Dolton and Matthews operated a ferryboat across the river starting in 1836. In 1836, Dolton and another settler, Levi Osterhoudt, built a toll bridge across the river, which they operated until 1842 when it was purchased by the county (Goodspeed and Healy 1909:317). The area grew slowly as a truck farming community that provided produce to Chicago. Early farmers were soon joined by Dutch and Swedish railroad workers during construction of the Illinois Central tracks through the area from 1850 to 1852 (Andreas 1884:601-602).

Riverdale became part of Hyde Park Township in 1867, the year a small frame school was built in the community. The following year George Dolton commissioned David Andrews, an early resident of West Pullman, to make the first plat of Riverdale. The name Riverdale came into common use in 1873 when the first post office was opened. Prior to that time, the area had been called Dolton or Dolton Junction. A larger school building replaced the earlier one in 1874. By

1884 the Riverdale settlement had a population of just 600, and settlement was concentrated around the railroad station and post office on West 137th Street (Andreas 1884:602).

Riverdale was annexed to Chicago in 1889. During the 1880s and 1890s the fledgling community consisted mostly of small frame cottages. Surviving homes of this period can be found at 231 E. 136th Street and 13778 S. Leyden Avenue. A storefront building with flats above from the 1880s at 136176 S. Indiana Avenue recalls the early Indiana Avenue commercial district that was shared with the Village of Riverdale to the west. A *Chicago Tribune* article (1891b) about Riverdale's volunteer fire department noted, "The town consists of only a few dozen scattered houses and a few stores, and its comparative insignificance, coupled with the fact that it lies just on the edge of the corporation line, has caused the Fire Department to overlook its needs for fire protection." The population of Riverdale became more mixed as Irish groups moved into the area to work on the railroads and in the factories. A group of Russians of German descent settled north of the Little Calumet River between 133rd and 136th Streets (Chicago Fact Book Consortium 1995:163).

Riverdale's industrial development had its beginnings in the 1860s, when widespread truck farming gave rise to establishments that processed foods, such as a sugar beet refinery founded in 1865. The Union Copper Distilling Company of Chicago established the Riverdale Distillery in 1871, and by 1883 the company employed an average of 50 men and boasted a profit of \$1.5 million. In the late 19th century Riverdale was also home to lumber yards and planing mills operated by the Riverdale Lumber Company, which was established in 1879, and by the Calumet Lumber Company (Andreas 1884:602). Several railroads were built through the area between 1852 and 1880, claiming large parcels of land for their ROWs and yards. In addition to the Illinois Central, the railroads included the Pittsburg, Cincinnati, Chicago and St. Louis Railroad and the Chicago and Eastern Line.

The Pullman Company owned substantial acreage in the northern section of Riverdale, upon which they operated several businesses including a farm, a brickyard, and a paint company. Lake Calumet was dredged to supply clay for the brick-making operation that by 1893 reportedly manufactured from 20 to 30 million bricks a year. The Calumet Paint Company on 116th Street manufactured the paint used in Pullman's shops and factories. The paint company was purchased by Sherwin-Williams in 1888. The 140-acre Pullman Farm was fertilized by the sewage from George M. Pullman's self-sustaining, planned community; the farm's most profitable crops were onions, cabbage, and celery (Doty 1893:31-32, 155).

Riverdale Development: 1900 to 1950

By the start of the 20th century, the land in the northern two-thirds of the community had become increasingly industrialized. In 1902, Sherwin-Williams enlarged its 116th Street facility with new buildings on an additional 10 acres purchased that year from the Pullman Land Company. Over the next half century, the company's Riverdale plant grew to encompass 100 acres, which included land once used by the Pullman Farm. It became one of the largest paint factories in the world, capable of making the complete product, from raw material to container (*Chicago Tribune* 1902, Sherwin-Williams 2008). Other industries that moved into the area

included Chicago Drop Forge, the Illinois Terra Cotta Works, and the Swift and Knickerbocker ice plants (Keating 2008:259).

Industries dumped wastes into Calumet waterways, and sewers deposited human wastes in increasing amounts as factories and population grew. The currents flowing into the lake were inadequate to remove sewage and industrial wastes, and frequent dredging was necessary to keep channels open. The dredging and widening of the Little Calumet River to make it navigable for barges and the building of the Cal-Sag Channel (1911–1922) by the Sanitary District of Chicago (now Metropolitan Water Reclamation District of Greater Chicago) spurred further industrialization of the Calumet area during the first decades of the 20th century. The Cal-Sag Canal channel was dug between the Little Calumet River and the Sanitary and Ship Canal, altering the flow of the rivers and diverting wastes to the Illinois River and away from Lake Michigan. In 1922 the Sanitary District located a sewage treatment plant in Riverdale to service the growing communities on Chicago's Far South Side.

Riverdale's population did not keep pace with its burgeoning industries due to its remoteness from downtown Chicago and lack of accessible public transit. By 1920 the community had a population of just 1,207, which was concentrated between 133rd and 138th Streets. Its small housing stock consisted mainly of single-family frame cottages and bungalows. By 1940 there were only 1,500 residents and Riverdale was widely considered a place to work, but not to live (Chicago Fact Book Consortium 1995:163).

World War II revitalized industries on Chicago's Far South Side and stimulated demand for low-cost war-worker housing for African-Americans. The response of the federal government and the Chicago Housing Authority (CHA) was construction of the Altgeld Gardens public housing project on an immense 157-acre tract of vacant land between 130th and 133rd Streets, from Langley to Greenwood Avenues. Construction started in November 1943 and the complex was dedicated before a crowd of 5,000 people on August 26, 1945. It was developed and managed by CHA in conjunction with the National Housing Agency and the Federal Public Housing Authority. Ownership was originally held by the federal government but was transferred to CHA in 1956 (*Chicago Tribune* 1945, Bowly 1978:42).

Built at a cost of \$9 million, Altgeld Gardens featured 1,500 apartments that housed 7,000 people in 162 two-story row houses. The complex was designed by the modernist Chicago firm of Naess and Murphy. Its architects Sigurd Naess and Charles Murphy subsequently designed Chicago's first major skyscraper in the post-war era, the Prudential Building (1952–55). The row houses are constructed of common brick with concrete canopies over the front doors, and each house features a front lawn and rear yard (Bowly 1978:43–44).

Because Altgeld Gardens was created at an isolated location far from the established residential sections of the city, it lacked easy access to mass transit except for limited bus service. Provision had to be made for many community facilities including a Board of Health station, public library, nursery school, auditorium, and a community center. The Chicago Board of Education built four one-story school buildings for elementary and high school classes. Included in the center of the

development were privately owned businesses including a grocery store, bakery, barber and beauty shops, and a drug store. An interdenominational church was built in 1950 under the sponsorship of the Church Federation of Greater Chicago (Bowly 1978:45, *Chicago Tribune* 1944). Residents were served by the adjacent 16-acre Carver Park with its indoor gymnasium, swimming pool, fitness center, boxing ring, and multi-purpose clubrooms. Outside, the park offers a playground, baseball diamonds, and basketball courts. Carver High School—named for African-American scientist and educator George Washington Carver—was built in 1947 at 13100 S. Doty Avenue (Chicago Park District 2012).

Riverdale Development: 1950 to Present

The creation of Altgeld Gardens dramatically altered life in Riverdale as its population more than quadrupled by 1950 to 9,790 residents. In 1954 the CHA built the Philip Murray Homes as a 500-unit extension of Altgeld Gardens. Its two-story row houses, also designed by Naess and Murphy, were similar to, if somewhat simpler than, the adjacent houses of Altgeld Gardens. The new complex boosted Riverdale's population to more than 11,000 in 1960, 90 percent of whom were African-Americans residing in public housing.

In 1967–1968, the 800-unit Eden Green was built as the nation's first majority African-American owned and operated apartment and town house complex. The federally financed project, built on a 50-acre tract along Indiana Avenue between 130th and 133rd Streets, was sponsored by the Antioch Missionary Baptist Church of Englewood through the Antioch Foundation and targeted low and moderate-income families. The series of low-rise buildings were designed by architect Charles Edward Stadel and featured housing that ranges in size from one-bedroom garden apartments to four-bedroom town houses (*Chicago Tribune* 1967a, 1967b, 1968).

Riverdale's population reached a peak of 15,018 by 1970, despite the fact that several hundred white residents moved out. The area has lost both population and jobs since that time. A long history of heavy industrial use throughout the community—factories, railroads, landfills, and a wastewater treatment facility—has likely contaminated large tracts of land; additional information about hazardous materials and contaminations is presented in the *Hazardous Materials Technical Memorandum*. By 1990 only 10,821 people lived in Riverdale and two-thirds of its households lived in poverty. By 2000, the population had dropped to 9,809 residents and nearly all Riverdale residents are African-American (Keating 2008:260). Riverdale still lacks basic commercial amenities; most residents shop in retail areas in Roseland or in the south suburbs. Roseland Community Hospital on 111th Street is the nearest major medical facility.

Limited educational options for Riverdale children led to the 2009 construction of the Chicago International Lloyd Bond Charter School in Altgeld Gardens, which serves kindergarten through eighth grade. The school is named for Lloyd Bond, a Johns Hopkins-trained psychologist who grew up in Altgeld on the same block where the school now stands. The school replaced the private Our Lady of the Gardens, which was a fixture in the complex since its inception (Mack 2009). Particularly problematic for the community was the transformation of Carver High School to a selective high school military academy in 2000. This meant that high school students from Altgeld Gardens had to travel about 5 miles to Fenger High School in the Roseland community,

the next closest school. A long-running feud between Altgeld and Fenger students culminated in the death of a Fenger student in 2009 (Ahmed 2009). Escalating tensions finally prompted the Chicago Public Schools to build the Larry Hawkins Charter School in Altgeld Gardens, which opened in time for the 2010–2011 school year and serves grades 7 to 12.

A more than decade-long grassroots campaign by residents and community groups—including a young community organizer named Barack Obama—to have asbestos removed from apartments at Altgeld Gardens culminated in the 2003 asbestos abatement program funded by the federal government. In 1992, Altgeld Gardens was determined eligible for listing on the National Register by the Preservation Services staff of the Illinois Historic Preservation Agency.

Riverdale's most significant natural amenity is the 135-acre Beaubien Preserve, part of the Forest Preserve District of Cook County, which is in the southeastern corner of the community. The wooded preserve features large oaks that are over 100 years old with a few pockets of remnant prairie that harbor native species. At the center of the preserve is Flatfoot Lake, a popular fishing spot in the region. In recent years the Forest Preserve District of Cook County has worked to rehabilitate the area around the lake by cleaning up debris, testing water quality, restocking the lake with fish, refurbishing facilities, and establishing access to the waterway.

5.5.2 Surveyed Resources

As part of the fieldwork for the RLE Project, one building within the Riverdale portion of the APE was surveyed: 501 E. 130th Street. Altgeld Gardens, which was identified as an NRHP-eligible resource independent of the RLE Project, also lies within the Riverdale community. Maps in Appendix A present these findings graphically.

5.5.2.1 Resources Eligible for National Register of Historic Places

Altgeld Gardens, which was identified as NRHP-eligible independent of the RLE Project, was not surveyed as part of the RLE Project but lies within the Riverdale community.

5.5.2.2 Properties Surveyed but Determined Ineligible

The one surveyed property, a commercial property at 501 E. 130th Street, is too recent (constructed circa 1974–1988) to be eligible for inclusion on the NRHP.

5.6 Village of Calumet Park

The following subsections include a description of the historic context for the development of the Village of Calumet Park (**Section 5.6.1**) and an overview of historic properties that were surveyed (**Section 5.6.2**). No NRHP-listed sites or districts fall within the RLE APE in the Village of Calumet Park.

5.6.1 Historic Context

The Village of Calumet Park is approximately 15 miles south of Chicago's Loop. It is roughly bounded by 123rd Street on the north, with a parcel west of I-57 that extends to 119th Street; the

Metra train tracks on the west; Halsted Street, Racine Avenue, and Morgan Street to the east; and the Chicago city limits (138th Street) to the south.

Village of Calumet Park Development: 1900 to 1950

The Village of Calumet Park, settled by 200 to 300 residents representing a variety of ethnicities, was incorporated in 1912 as the Village of De Young (*Chicago Tribune* 1962). By 1914, the name had changed to Burr Oak. Throughout the first half of the 20th century it remained a sparsely settled, virtually lawless area that was mainly associated in the public's mind with vice and crime. A search of the *Chicago Tribune* historical archive for the Village of Burr Oak during the 1910s and 1920s revealed dozens of articles regarding notorious road houses, taverns, and poolrooms, mainly in the north section of the community, that were havens of drugs and gambling and locations for shootouts with outside authorities. The most infamous of these was the Burr Oak Inn at 119th and Wood Streets, a tavern and dance hall known as the "Crime Castle" in news accounts. It featured secret escape tunnels, concealed opium dens, and underground arsenals before it burned to the ground in 1920 (*Chicago Tribune* 1918a, 1918b, 1920).

Regular raids of the village seemingly did little to curb its illicit activities. During a January 1922 raid of four saloons and poolrooms in which four slot machines were confiscated, the Chief Deputy Sheriff admitted, "these places have been raided before," and vowed to "continue these raids, one after the other, until all gambling is stopped" (*Chicago Tribune* 1921). The most lucrative activity in the village during the 1920s era of Prohibition was bootlegging. A July 1924 raid of 11941 S. Wood Street revealed a moonshine layout, which Chief Raider Otto Grewuch described as "the most wonderful I've ever seen," that was in full operation. Three truckloads of moonshining equipment were confiscated, including 100-gallon stills and 100 barrels of mash (*Chicago Tribune* 1924b). In one 1927 raid, 35 prohibition agents discovered stills ranging from 50 gallons to 500 gallons at various locations throughout the village. A vat of 3,500 gallons of newly brewed beer was still simmering at 12402 S. Green Street (*Chicago Tribune* 1927).

The unsavory reputation of their village led residents to petition the mayor and the board of trustees for a name change from Burr Oak to Calumet Park in 1925 (*Chicago Tribune* 1925). Among the earliest residential subdivisions was Calumet Highlands, a 40-acre tract bounded by Ashland Avenue, Loomis Street, 125th Street, and 127th Street. The tract was owned by the National Realty Association, which in 1924 announced its intention to build approximately 200 bungalows and two-flat residential buildings at a cost of \$1.5 million (*Chicago Tribune* 1924a). The Village of Calumet Park received its first recreational amenity in 1938 with the opening of the 23-acre Raceway Park at the southeast corner of Ashland Avenue and Vermont Street (*Chicago Tribune* 1938). This ¼-mile stock car racetrack, which operated for decades, mainly featured midget car racing during the late 1930s and early 1940s. Calumet Park remained largely undeveloped during the first half of the 20th century and did not have a single religious institution within its boundaries. By 1940 it had a population of just 1,593 (Biggott 2005).

Village of Calumet Park Development: 1950 to Present

The Village of Calumet Park experienced its greatest period of growth during the 1950s, a decade that saw its population more than double from 2,500 in 1950 to an estimated 5,600 in 1955

(*Chicago Tribune* 1955a). By 1959 the population had nearly doubled again to approximately 9,000 residents (Bliss 1959c). During this decade streetscapes began to fill with small, one-story brick-clad tract homes that remain the predominant building type in the village, along with split-level homes and some small apartment buildings. Calumet Park still featured large tracts of undeveloped land in the late 1950s, as evidenced by a 1959 *Chicago Tribune* article about a proposed 90-home development in the vicinity of 124th and Bishop Streets (*Chicago Tribune* 1959a). Although the area had been subdivided, it was unpaved and lacked sewer and water mains.

In 1951 Calumet Park received its first religious edifice with the construction of the Church of the Seven Holy Founders at 124th and Ada Streets. The brick building of modernist design included five classrooms for the parish's 300 Polish and Irish Catholic families, who had worshipped in the Village Hall since 1949 (*Chicago Tribune* 1951). In 1956, the Community Covenant Church of Calumet Park erected an educational building at 125th and Loomis Streets. Designed by Whitehead, Billman and Associates, the one-story brick building housed a large fellowship hall intended for worship services and 15 classrooms for its congregation of 100, which the pastor expected to double within the year (*Chicago Tribune* 1955b).

The growing suburb retained its reputation for vice, however. In 1959, the *Chicago Tribune* ran a series of articles on the village, noting that it had replaced Calumet City as the center of gambling by organized crime in the south suburbs. The village at that time lacked a full-time police force, although it had 26 part-time men on the payroll at \$1.25 an hour. Its part-time police chief worked during the day as a clerk in the office of the Cook County Recorder of Deeds. The most elaborate and profitable gambling enterprise in the village at that time was the Club Corral at 12906 S. Ashland Avenue, which one reporter referred to as the "mob's newest gaming den," doing business that "far exceeded the hopes of the syndicate." According to one gambler who patronized its four roulette wheels, four dice tables, two blackjack tables, and faro and poker games, the Corral handled more money in one night than any single gambling room in Las Vegas. The swanky club, with its plush bar and attractive restaurant, attracted customers of the "mink coat set" from Chicago's North Shore suburbs (Bliss 1959a).

Business at the Club Corral was booming seven nights a week until it was shut down following a July 1959 exposé on the establishment. Illegal gambling run by the crime syndicate was not, however, confined to one establishment. On an ordinary afternoon, hundreds of factory workers and housewives could be found making horse race bets and gambling in numerous taverns and other buildings throughout the village. For example, the second floor of a large garage at 1129 W. 127th Street hosted a busy gaming operation run by George (Babe) Tuffanelli, the gambling power in the south Cook County area. And a tavern at the southwest corner of 123rd and Green Streets had so many customers for its gaming operations in 1959 that residents had to park two and three blocks from their homes (Bliss 1959e).

Village President John Swalec's reaction to newspaper revelations of widespread gambling aroused the ire of residents when he stated at an August 1959 public meeting, "he never heard of gambling in the village until he read about it in the Tribune." In response, one woman shouted:

“Our town has the biggest crap game in the country” (*Chicago Tribune* 1959b). Four Calumet Park trustees, who were elected on a “good government” platform, pressed for reform and vowed they would work for an end to gaming in the village (Bliss 1959b). Swalec’s subsequent clampdown on church bingo games was widely viewed by residents as a vindictive measure (Bliss 1959d).

The decade of the 1960s saw construction of the I-57 expressway through the west side of Calumet Park. The Burr Oak Elementary School at 1440 W. 125th Street received a four-room addition in 1964 (*Chicago Tribune* 1964a). In the same year, the Calumet Park recreation association built a public swimming pool at 124th and Morgan Streets, and the village established a small public library in rented quarters at 12545 S. Ashland Avenue (*Chicago Tribune* 1964b). By 1970 the population reached 10,069 with 60 businesses, most of which were along the commercial strips of 127th Street and Ashland Avenue (Biggott 2005). The lack of diversity among these commercial establishments—which featured numerous fast food restaurants, motels, and automotive services—led residents to depend on larger neighbors such as Blue Island for jobs and shopping.

As late as 1978 the village’s population was 80 percent white, 5 percent African-American, and 15 percent Latino (Gaspar 1978). By 1992 African-Americans accounted for 72 percent of the population (Biggott 2005). The transition from a white to a black suburb produced conflict. In the summer of 1992 two black prisoners died in the village jail within weeks of each other, allegedly by suicide. The incidents attracted the attention of Chicago Alderman Robert Shaw and led to rallies and protests against the community’s all-white police force (Kirby 1992). Buster Porch was elected in 1996 as the first African-American mayor of Calumet Park.

Despite its dip in population from 8,516 to 7,835 between 2000 and 2010, Calumet Park has experienced some development over the past decade, including two large condominium buildings erected in 1998 on 127th Street west of I-57 and at 123rd and Laflin Streets (Kukec 1998). In the same year, 17 single-family homes were erected near 129th and Aberdeen Streets. Raceway Park continued in operation through the 20th century, featuring many types of motorsport activity over the decades including stock car and motorcycle racing and demolition derbies. The racetrack closed in 2000 and was subsequently replaced by the Raceway Park Shopping Center.

5.6.2 Surveyed Resources

As part of the fieldwork for the RLE Project, seven buildings within the Calumet Park portion of the APE were surveyed. These properties, along with their construction date and an assessment of their eligibility for listing on the NRHP, are presented in Table 5-5, alphabetized by street name. Properties determined individually eligible are highlighted. A series of maps in Appendix A graphically present these findings; individual inventory sheets for surveyed properties are presented in Appendix B.

Table 5-5: Seven Surveyed Properties in Calumet Park

Address	Year Built	Description	Eligibility
12317 S. Green Street	1907	Single-Family	Not Eligible
12359 S. Green Street	1949	Single-Family	Not Eligible
12409 S. Green Street	1925	Single-Family	Not Eligible
12308 S. Halsted Street	1950	Commercial	Not Eligible
12338 S. Halsted Street	1938-1952	Public	Not Eligible
12352 S. Halsted Street	1924	Single-Family	Not Eligible
12540 S. Halsted Street	1923	Cedar Park Cemetery Entryway and Gatehouse	Eligible

5.6.2.1 Resources Eligible for National Register of Historic Places

Of the seven resources surveyed within the Calumet Park portion of the RLE APE, one was identified as eligible for listing on the NRHP.

Gatehouse and Entryway to Cedar Park Cemetery, 12540 S. Halsted Street

The Cedar Park Cemetery, founded in the early 20th century, comprises a formal landscape on 94.5 acres at 12540 S. Halsted Street. Plantings include large deciduous shade trees, as well as ornamental shrubs and mowed lawn. Grave markers are mounted flush with the lawn. Extant buildings and structures include the office/gatehouse with ornamental gate and fence, an obelisk, three mausoleums, and a cinder block building.

Overall, the landscape is not exceptional, nor does it contain any distinctive design features; the cemetery does not warrant listing on the NRHP. Of the extant structures, only the gatehouse and adjacent fenced entryway were identified as NRHP-eligible. The unusual stonework that is not readily seen in the area, the high quality of craftsmanship in their construction, and the high level of integrity the resource retains in regards to location, materials, design, setting, workmanship, and feeling, make the building, piers, and gates locally eligible for NRHP listing under Criterion C for architecture.

Cedar Park Cemetery's one-story Romanesque Revival style gatehouse, shown in Figure 5-15, is at its Halsted Street entrance. The entrance features two pairs of massive stone gateposts and metal entrance gates. Original metal fencing extends along the length of the cemetery's Halsted Street boundary, which also features several stone piers. The gatehouse, gateposts, and piers are built of grey, brown, and pink stones that are randomly laid. The building and piers have excellent integrity and were likely installed circa 1923, along with the metal entrance gates and fencing along Halsted Street, when the Cedar Park Cemetery Association purchased its original 53-acre site. The building, piers, and gates are locally eligible for NRHP listing under Criterion C for architecture due to their high quality craftsmanship and unusual stonework.

Figure 5-15: Cedar Park Cemetery Gatehouse

The gatehouse has a flat roof, parapet, and stone cornice. All windows have stone sills and stone lintels with a type of scallop shell motif. The Halsted Street elevation has four windows: a small stained glass window in its projecting bay, a single window with round-arched transoms on either side of the bay, and a small, round-arched window flanked by slender colonettes in the parapet gable. The Halsted Street elevation bay is topped with stone banding incised with the words “Cedar Park Cemetery.” The north elevation has a centrally located pair of wood French doors and six wood sash windows, three each on either side of the entrance. The south elevation has a centrally located, multi-paned wood door with sidelights flanked by slender engaged columns. The south elevation’s four windows include a single one-over-one window on one side of the door and a group of three windows—a single pane flanked by one-over-one windows—on the other. Doors on both the north and south elevations are topped by flat stone lintels and accessed via concrete steps flanked by stone piers. The rear elevation has five one-over-one windows: a single, centrally located window with a pair of windows on either side.

Elsewhere in the cemetery, the three granite-clad mausoleums appear to date from the middle to late 20th century. One of these features a chapel, which hosts non-denominational funeral services. The cinder block building, accessed by a secondary entrance just north of 125th Street, is utilitarian in nature and may serve as a maintenance building and/or as a crematorium. Neither the mausoleums nor the cinder block building are eligible for inclusion on the NRHP.

5.6.2.2 Properties Surveyed but Determined Ineligible

Beyond the properties that were identified as individually eligible for NRHP listing, a number of properties were surveyed that did not meet the criteria. Generally, these properties have had subsequent alterations that compromise their historic integrity or do not feature a level of distinctive architectural detailing necessary to qualify for the NRHP.

5.7 Summary of CHRS Resources

Independent of the evaluation process described above, several resources within the APE were evaluated as part of the CHRS. Those rated as Red or Orange in the survey are subject to the City's Demolition Delay Ordinance. Red- and Orange-rated properties within the RLE APE are listed in Table 5-6, alphabetized by street name.

Table 5-6: Chicago Historic Resources Survey Red/Orange Properties in the Area of Potential Effects

Address	CHRS Rating
Chicago Fire Department, 324 W. 104th Street (Alternate: 328-330 W. 104th Street)	Orange
Roseland Pumping Station, 351 W. 104th Street	Orange
1000-1120 W. 120th Street (Note: Demolished since CHRS completed)	Orange
House, 11310 S. Emerald Avenue	Orange
Substation, 10227 S. Halsted Street	Orange
St. Salomea Church, 11800-11808 S. Indiana Avenue	Orange
Commercial Building, 11206 S. Michigan Avenue	Orange
First Christian Reform Church, 10920 S. Princeton Avenue (Alternate: 10914 S. Princeton Avenue)	Orange

5.8 Parks as Historic Resources

Eight parks fall within the RLE APE. They are summarized in Table 5-7 and shown graphically in Figure 5-16. Cultural historians conducted archival research, drawing largely from recent work by Julia Bachrach of the Chicago Park District, and visited these sites in fall 2012 to assess their eligibility according to NRHP guidelines. Of the eight parks, none are recommended eligible for NRHP listing; however, each will be described in the separate *Section 4(f) Technical Memorandum* for the RLE Project.

Figure 5-16: Surveyed Parks within the Area of Potential Effects

Table 5-7: Eight Surveyed Parks in the Area of Potential Effects

Park	Address*	Date Open	Eligibility
Abbot Park	49 E. 95th Street	1950	Not Eligible: Lacks Historic Integrity
Block Park	341 W. 104th Street	1912	Not Eligible: Building Razed
Euclid Park	9800 S. Parnell Avenue	1926	Not Eligible: Lacks Historic Integrity
Fernwood Parkway	9501 S. Eggleston Avenue	1887	Not Eligible: Lacks Historic Integrity
Golden Gate Park	13000 S. Eberhart Avenue	1969	Not Eligible: Less than 50 years
Kensington Park	345 E. 118th Street	1942	Not Eligible
Major Taylor Bike Trail	117th to 122nd Streets	2007	Not Eligible: Less than 50 years
Smith Playlot (Wendell Smith Park)	9912 S. Princeton Avenue	1970	Not Eligible: Less than 50 years

* Based on Chicago Park District files

Three of the parks within the APE do not meet the 50-year age threshold for listing in the NRHP. The five older parks have had modern alterations that compromise their historic integrity, as summarized below:

- Abbot Park, which opened in 1950, is home to modern recreational amenities including baseball diamonds, tennis courts, a volleyball court, a basketball court, a swimming pool, walking trails, and playground equipment. Two structures on the property are over 50 years in age; neither has distinguishing architectural features. Overall, the historic integrity of the park has been compromised by modern alterations.
- Block Park, which opened in 1912, originally included the Griffith Natatorium and Roseland Park. The natatorium was razed in 1998; today the park includes open space with benches and walking paths. Overall, the historic integrity of the park has been compromised by the demolition of the structure.
- Euclid Park, which opened in 1926, originally contained open space and ball fields. The park was rehabilitated in the 1960s, when the original structure was replaced with a new fieldhouse. Overall, the historic integrity of the park has been compromised by modern modifications.
- Fernwood Parkway, which was established in 1887, originally included green space planted with trees and lawn. In the early 20th century the park was replanted and a wading lagoon was added, but was removed in the 1920s. Additional alterations occurred in the 1960s and 1970s including planting, lighting, and grading. Although Fernwood Parkway was the first parkland in the neighborhood and has long been a defining feature of the Roseland community and Fernwood area, the park site lacks integrity and sufficient historical significance to be considered eligible for NRHP listing.

- Kensington Park, which was purchased by the City in 1942, contains a number of recreational amenities: a mid-20th century field house that is no longer in use, modern playground equipment, a splash pad, a paved basketball court, a horseshoe pit, and baseball fields. Although the fieldhouse is over 50 years in age, it lacks any distinguishing architectural features. The remaining elements of the park are modern additions. Overall, the historic integrity of the park has been compromised by modern alterations.

Section 6

Effects and Mitigations

The following subsections describe the effect findings following consultation with the SHPO and consulting parties. Figure 6-1 presents the locations of each NRHP-eligible resource in relation to the proposed project alternatives; maps in **Appendix D**, prepared for the *Displacements and Relocations of Existing Uses Technical Memorandum*, depict the relationship between each alternative alignment and nearby historic resources at a larger scale.

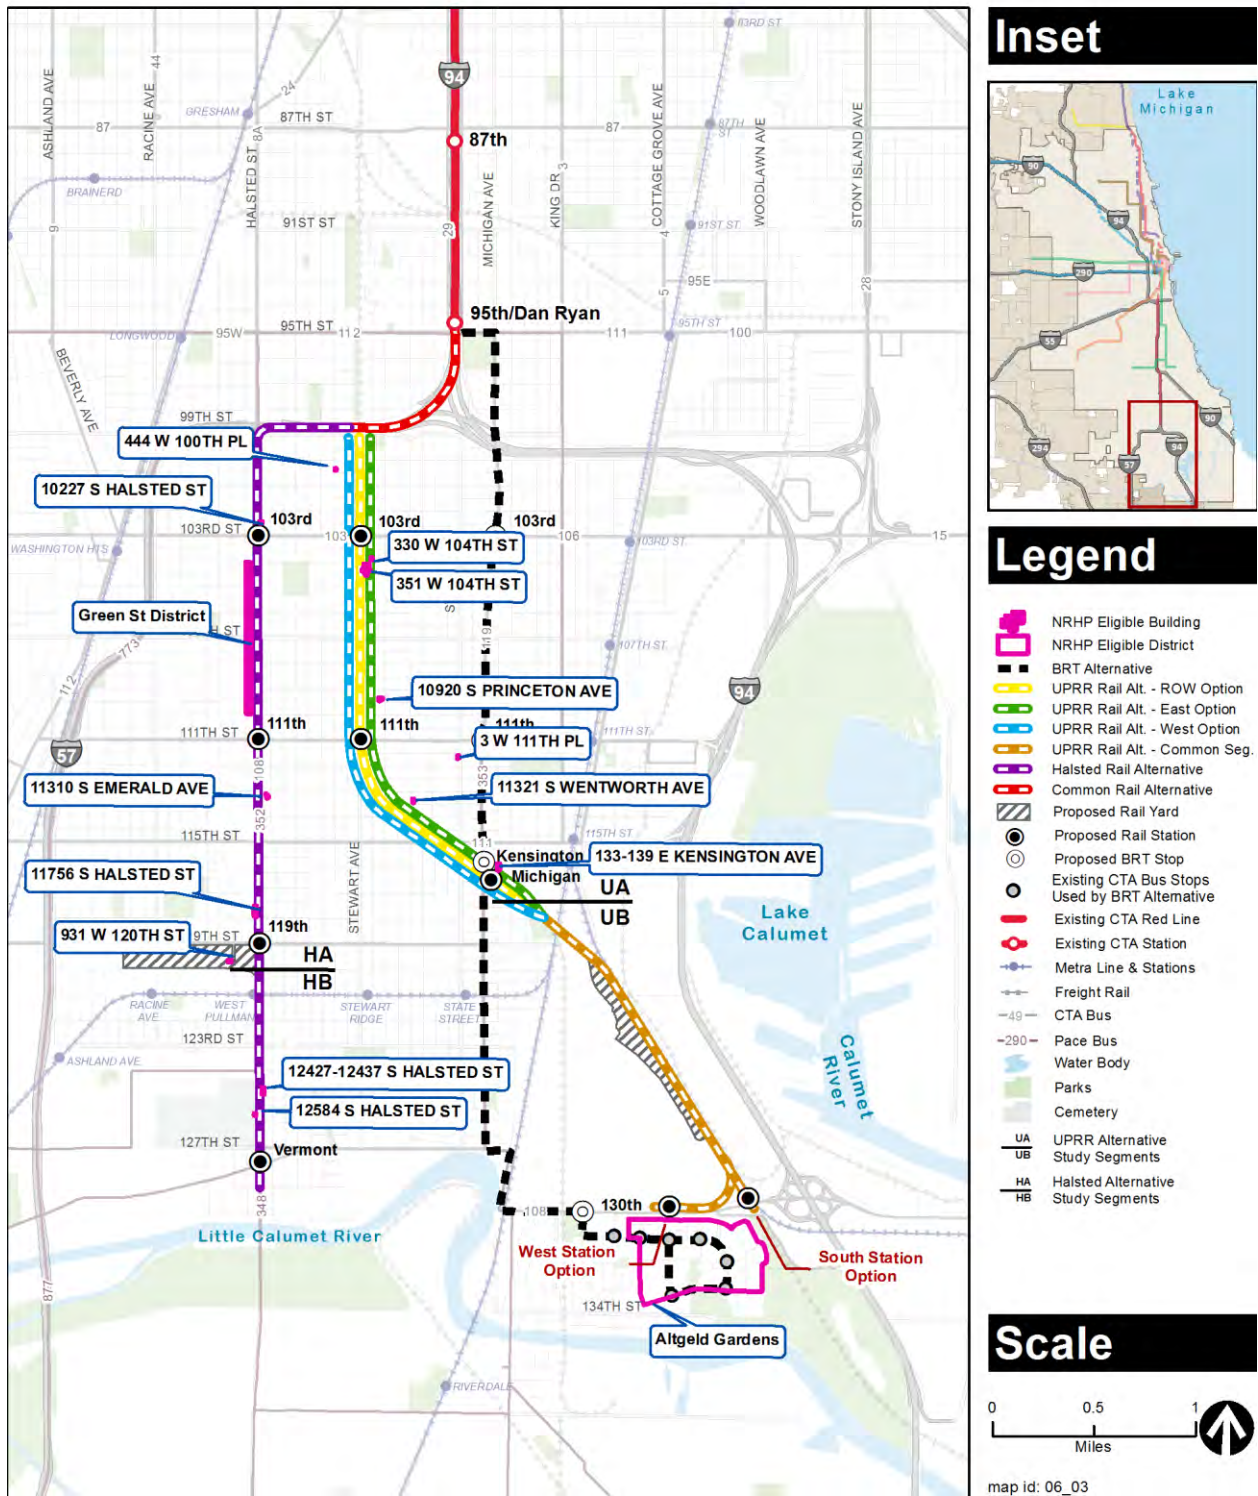

Figure 6-1: NRHP Eligible Sites within the Area of Potential Effects

6.1 No Build Alternative

No adverse effects to historic resources are anticipated to occur as a result of the No Build Alternative.

6.2 Bus Rapid Transit Alternative

Three resources near the BRT corridor have been identified as NRHP-eligible: the Bethany Reformed Church Manse at Three West 111th Place, the Venetian Hall at 133–139 East Kensington Avenue, and the Altgeld Gardens Housing Project. None are anticipated to be adversely affected by the BRT Alternative. Table 6-1 summarizes effects for each historic resource.

Table 6-1: Effects Findings (BRT Alternative)

NRHP Eligible Resource	Effect Finding
Bethany Reformed Church Manse, 3 W. 111th Place	No Effect
Former Venetian Hall, 133-139 E. Kensington Avenue	No Adverse Effect
Altgeld Gardens Housing Project	No Effect

Bethany Reformed Church Manse: No Effect

This Craftsman style residence was home to pioneer media evangelist Reverend Harry J. Hager; it is eligible under Criterion B for its association with Reverend Hager. Under the BRT Alternative, a surface parking lot would be constructed to the east of the building.

The Bethany Reformed Church Manse would not be displaced by the BRT Alternative. Technical analyses suggest that the property would not be subject to visual, noise, or vibratory effects. Construction activities would not affect the characteristics that qualify the resource for inclusion on the NRHP; therefore, the finding is that the BRT Alternative would have no effect on the Bethany Reformed Church Manse.

Former Venetian Hall: No Adverse Effect

This former social venue and performance hall for Italian-Americans has been converted to a church; it is eligible under Criterion A for its original use as a social venue for area residents in the early 20th century. Under the BRT Alternative, a three-story parking structure would be constructed to the south and west of the building.

The former Venetian Hall would not be displaced by the BRT Alternative. While the construction of the parking structure would alter the local setting visually, it would not adversely affect the characteristics that qualify the property for inclusion on the NRHP. Technical analyses suggest that the former Venetian Hall would not be subject to noise or vibratory effects. While construction activities would likely be perceptible at the hall, it would not adversely affect the characteristics that qualify the resource for inclusion on the NRHP; therefore, the finding is that the BRT Alternative would have no adverse effect on the Venetian Hall.

Altgeld Gardens Housing Project: No Effect

This large housing project was built in the early 1940s and is eligible as a district for NRHP listing

under Criterion A for its association with community development, planning, and social history. Under the BRT Alternative, buses would travel between the 95th Street Terminal and 130th Street before continuing to circulate through Altgeld Gardens.

The Altgeld Gardens public housing project would not be displaced or have any direct effects due to implementation of the BRT Alternative. No visual, noise, vibration, or construction effects would affect the characteristics that qualify the resource for inclusion on the NRHP; therefore, the finding is that the BRT Alternative would have no effect on the Altgeld Gardens public housing project as a historic resource.

6.3 Union Pacific Railroad Rail Alternative - Right-of-Way Option

Seven resources near the UPRR corridor have been identified as NRHP-eligible: the Eclectic Neo-Traditional Home at 444 W. 100th Place, the fire station at 324 W. 104th Street, the Roseland Pumping Station at 351 W. 104th Street, the Romanesque revival church at 10920 S. Princeton Avenue, the Venetian Hall at 133-139 E. Kensington Avenue, the Roseland Community Hospital Nurses Home at 11321 S. Wentworth Avenue, and the Altgeld Gardens Housing Project. None are anticipated to be adversely affected by the UPRR Rail Alternative; Table 6-2 summarizes effects for each historic resource. With the exception of one property (the Roseland Pumping Station), effects for all three UPRR Rail Alternative options (ROW, East, and West) would be the same.

Table 6-2: Effects Findings (UPRR Rail Alternative - ROW Option)

NRHP Eligible Resource	Effect Finding
Eclectic Neo-Traditional Home, 444 W. 100th Place	No Effect
Fire Department Engine Co. 93, 324 W. 104th Street	No Effect
Roseland Pumping Station, 351 W. 104th Street	No Effect
Romanesque Revival Church, 10920 S. Princeton Avenue	No Effect
Roseland Community Hospital Nurses Home, 11321 S. Wentworth Avenue	No Effect
Former Venetian Hall, 133-139 E. Kensington Avenue	No Effect
Altgeld Gardens Housing Project	No Effect/No Adverse Effect ¹

¹ No Effect finding for South Station Option; No Adverse Effect for West Station Option

Archaeological sites may be uncovered during construction activities. If this occurs, additional investigations will be necessary to determine the eligibility of sites and whether the project would lead to an adverse effect.

6.3.1 Segment UA

Six of the seven resources fall within the northern portion of the route, Segment UA.

Eclectic Neo-Traditional Home: No Effect

The Eclectic Neo-Traditional Home at 444 W. 100th Place is NRHP-eligible under Criterion C for its architecture. The UPRR Rail Alternative ROW Option corridor would be approximately one block east of the property.

The Eclectic Neo-Traditional Home would not be displaced by the UPRR Rail Alternative. No visual, noise, vibration, or construction effects would affect the characteristics that qualify the resource for inclusion on the NRHP; therefore, the finding is that the UPRR Rail Alternative ROW Option would have no effect on this residence.

Fire Department Engine Company 93: No Effect

The fire station at 324 W. 104th Street is NRHP-eligible under Criterion C for its architecture. The UPRR Rail Alternative ROW Option corridor would be approximately 200 feet east of the property.

The Fire Department Engine Company 93 station would not be displaced by the UPRR Rail Alternative. No visual, noise, vibration, or construction effects would affect the characteristics that qualify the resource for inclusion on the NRHP; therefore, the finding is that the UPRR Rail Alternative ROW Option would have no effect on this property.

Roseland Pumping Station: No Effect

The Roseland Pumping Station is NRHP-eligible under Criterion C for its architecture. The UPRR Rail Alternative ROW Option corridor would be immediately east of the property.

The pumping station would not be displaced or directly affected by the UPRR Rail Alternative. No visual, noise, vibration, or construction effects would affect the characteristics that qualify the resource for inclusion on the NRHP. The close proximity of the proposed alternative to the resource is offset by the presence of the existing UPRR freight line; implementation of the UPRR Rail Alternative would not alter the setting or feeling of the resource. Therefore, the finding is that the UPRR Rail Alternative ROW Option would have no effect on this resource.

Romanesque Revival Church: No Effect

The church at 10920 S. Princeton Avenue is NRHP-eligible under Criterion A for its association with the community's former Dutch population and under Criterion C for its architecture. The UPRR Rail Alternative ROW Option corridor would be over ½ block west of the property.

The church would not be displaced or directly affected by the UPRR Rail Alternative. No visual, noise, vibration, or construction effects would affect the characteristics that qualify the resource for inclusion on the NRHP; therefore, the finding is that the UPRR Rail Alternative ROW Option would have no effect on the church.

Roseland Community Hospital Nurses Home: No Effect

Built by the Roseland Community Hospital, this former nurses' home served as an educational facility for nurses; it is NRHP-eligible under Criterion A for its association with education. The UPRR Rail Alternative ROW Option corridor would be over 350 feet southwest of the property, separated from the line by numerous smaller residential buildings.

The Roseland Community Hospital Nurses Home would not be displaced by the UPRR Rail Alternative. No visual, noise, vibration, or construction effects would affect the characteristics

that qualify the resource for inclusion on the NRHP; therefore, the finding is that the UPRR Rail Alternative ROW Option would have no effect on this resource.

Former Venetian Hall: No Effect

This former social venue and performance hall for Italian-Americans has been converted to a church; it is NRHP-eligible under Criterion A. The UPRR Rail Alternative ROW Option corridor would be over 150 feet southwest of the property, separated from the line by smaller buildings and a vacant surface lot.

The former Venetian Hall would not be displaced by the UPRR Rail Alternative. No visual, noise, vibration, or construction effects would affect the characteristics that qualify the resource for inclusion on the NRHP; therefore, the finding is that the UPRR Rail Alternative ROW Option would have no effect on this resource.

6.3.2 Segment UB

One of the seven resources falls within the southern portion of the route, Segment UB.

Altgeld Gardens Housing Project: No Effect for South Station Option; No Adverse Effect for West Station Option

This large housing project was built in the early 1940s and is eligible for NRHP listing under Criterion A for its association with community development, planning, and social history. Under the UPRR Rail Alternative, an at-grade station to provide access to Altgeld Gardens would be constructed in one of two locations: a South Station Option or a West Station Option. Either station location option is separated from Altgeld Gardens Historic District by a multi-lane street (i.e., E. 130th Street and/or E. 130th Place). Preliminary plans for each terminal station option would include parking for 2,300 vehicles through a combination of a parking structure and surface parking lots.

The complex would not be displaced or directly affected by the UPRR Rail Alternative.

The South Station Option parking structure for the UPRR 130th Street Station is approximately 800 feet from Altgeld Gardens Historic District at its closest point; the parking structure would not be visible from within the historic district and would not affect the historic district.

The West Station Option parking structure for the UPRR 130th Street Station is approximately 400 feet from Altgeld Gardens Historic District at its closest point and would only be visible from the outer line of buildings on the north side of the Altgeld Gardens development. This outer row of buildings would obstruct the view of the parking structure from interior buildings and streets. The construction of the West Station Option would not adversely affect the characteristics that qualify the district as eligible for NRHP listing, i.e., its association with community development, planning, and social history.

Therefore, the finding is that the South Station Option would have no effect on this resource, and the West Station Option would have no adverse effect on this resource.

6.3.3 120th Street Yard and Shop

No properties identified as NRHP-eligible lie in the vicinity of the proposed yard and shop location; therefore, no effects are anticipated.

6.4 Union Pacific Railroad Rail Alternative - East Option

For six of the seven properties, findings for effects on historic properties under the UPRR Rail Alternative East Option are the same as those presented in **Section 6.3** for the ROW Option:

6.4.1 Segment UA

- Eclectic Neo-Traditional Home at 444 W. 100th Place, No Effect
- Fire Department Engine Company 93 at 324 W. 104th Street, No Effect
- Roseland Pumping Station at 351 W. 104th Street, No Adverse Effect - discussed below
- Romanesque Revival Church at 10920 S. Princeton Avenue, No Effect
- Roseland Community Hospital Nurses Home at 11321 S. Wentworth Avenue, No Effect
- Former Venetian Hall at 133-139 E. Kensington Avenue, No Effect

6.4.2 Segment UB

- Altgeld Gardens Housing Project, No Effect

Because of the proximity of the East Option to the Roseland Pumping Station, the project is anticipated to have no adverse effect. Based on conceptual designs, the track structure is approximately 8.8 feet from the side of the building at its nearest point. It should be noted that an existing at-grade freight line runs in close proximity to this location. The pumping station would not be displaced or directly affected by the UPRR Rail Alternative. The changes in the setting (visual, noise, vibration, etc.) would not adversely affect the characteristics that qualify the resource as eligible for NRHP listing, i.e., its architecture.

Archaeological sites may be uncovered during construction activities. If this occurs, additional investigations will be necessary to determine the eligibility of sites and whether the project would lead to an adverse effect.

6.4.3 120th Street Yard and Shop

No properties identified as NRHP-eligible lie in the vicinity of the proposed yard and shop location; therefore, no effects are anticipated.

6.5 Union Pacific Railroad Rail Alternative - West Option

Findings for effects on historic properties under the UPRR Rail Alternative West Option are the same as those presented in **Section 6.3** for the ROW Option:

6.5.1 Segment UA

- Eclectic Neo-Traditional Home at 444 W. 100th Place, No Effect
- Fire Department Engine Company 93 at 324 W. 104th Street, No Effect
- Roseland Pumping Station at 351 W. 104th Street, No Effect
- Romanesque Revival Church at 10920 S. Princeton Avenue, No Effect
- Roseland Community Hospital Nurses Home at 11321 S. Wentworth Avenue, No Effect
- Former Venetian Hall at 133-139 E. Kensington Avenue, No Effect

6.5.2 Segment UB

- Altgeld Gardens Housing Project, No Effect

Archaeological sites may be uncovered during construction activities. If this occurs, additional investigations will be necessary to determine the eligibility of sites and whether the project would lead to an adverse effect.

6.5.3 120th Street Yard and Shop

No properties identified as NRHP-eligible lie in the vicinity of the proposed yard and shop location; therefore, no effects are anticipated.

6.6 Halsted Rail Alternative

6.6.1 Rail Corridor

Seven resources near the Halsted Rail Alternative corridor have been identified as NRHP-eligible: the Green Street Historic District, the former substation at 10227 S. Halsted Street, the French Eclectic residence at 11310 S. Emerald Avenue, the Galloy and Van Etten industrial building at 11756 S. Halsted Street, the church at 12427 S. Halsted Street, the fire station at 931 W. 120th Street, and the Cedar Park Cemetery entryway and gatehouse at 12540 S. Halsted Street. The fire station lies within the footprint of the proposed rail yard and is discussed separately in **Section 6.6.2**. Four resources are anticipated to be adversely affected by the alternative. Table 6-3 summarizes effects for each historic resource.

Table 6-3: Effects Findings (Halsted Rail Alternative)

NRHP Eligible Resource	Effects Finding
Green Street Historic District	No Adverse Effect
Former Classic Revival Substation, 10227 S. Halsted Street	Adverse Effect
French Eclectic Home, 11310 S. Emerald Avenue	No Adverse Effect
Galloy & Van Etten Stone Contractors, 11756 S. Halsted Street	No Adverse Effect
S.S. Peter & Paul Catholic Church, 12433-12439 S. Halsted Street	Adverse Effect
Cedar Park Cemetery Entryway and Gatehouse, 12540 S. Halsted Street	Adverse Effect
Fire Department Engine Co. 115, 931 W. 120th Street	Adverse Effect

Archaeological sites may be uncovered during construction activities. If this occurs, additional investigations will be necessary to determine the eligibility of sites and whether the project would lead to an adverse effect.

Green Street Historic District: No Adverse Effect

This district along Green Street between 104th and 109th Streets is eligible under Criterion C as a cohesive collection of 1950s and 1960s homes. The Halsted Rail Alternative corridor would be over 100 feet west of the property, generally screened by commercial properties along the western side of Halsted Street.

No homes within the Green Street Historic District would be displaced or directly affected by the Halsted Rail Alternative. Construction of the track structure would alter the setting along Halsted Street; this change would be visible from some locations within the district and would lead to a severe noise impact along Green Street. With the installation of noise walls, the noise impact would be reduced to moderate. These changes in setting along Halsted Street would not adversely affect the characteristics that qualify the district for inclusion on the NRHP. Technical analyses suggest that the homes would not be subject to vibratory effects. While construction activities would likely be perceptible within the district, they would not adversely affect the characteristics that qualify the resource for inclusion on the NRHP. The finding is that the Halsted Rail Alternative would not have an adverse effect on this resource.

Classical Revival Substation: Adverse Effect

The Classical Revival style substation at 10227 S. Halsted Street is eligible under Criterion C for its architecture. The Halsted Rail Alternative corridor would be immediately adjacent to the property.

Although the former substation would not be demolished as a result of implementing the Halsted Rail Alternative, the elevated track structure would be located a few feet from the front facade. This resource would be subject to an adverse visual impact due to construction of the Halsted Rail Alternative. Short-term effects due to construction activities may also lead to adverse effects, depending on the construction techniques employed. Neither noise nor vibratory effects would affect the characteristics that qualify the resource for inclusion on the NRHP. The finding is that the Halsted Rail Alternative would have an adverse effect on this resource.

French Eclectic Home: No Adverse Effect

The home at 11310 S. Emerald Avenue is NRHP-eligible under Criterion C for its architecture. The Halsted Rail Alternative corridor would be over 150 feet west of the property, screened by vegetation and a commercial property on Halsted Street.

The home would not be displaced or directly affected by the Halsted Rail Alternative. Changes in the setting along Halsted Street would not adversely affect the characteristics that qualify the French Eclectic Home as eligible for NRHP listing, i.e., its architecture. The property stands away from the proposed track structure and would be screened by the intervening space, vegetation, and buildings along Halsted Street; therefore, the finding is that the Halsted Rail Alternative would have no adverse effect on this resource.

Galloy and Van Etten Stone Contractors: No Adverse Effect

The industrial building at 11756 S. Halsted Street is eligible under Criterion A for its association with industry. The Halsted Rail Alternative corridor would be immediately adjacent to the property.

Although the property would not be demolished as a result of implementing the Halsted Rail Alternative, the elevated track structure would be located a few feet from the side of the building. While it would be subject to visual, noise, and construction impacts due to implementation of this alternative, these changes would not adversely affect the characteristics that qualify the resource for inclusion on the NRHP. Technical analyses suggest that the property would not be subject to vibratory effects. The finding is that the Halsted Rail Alternative would have no adverse effect on this resource.

S.S. Peter & Paul Catholic Church: Adverse Effect

The modernistic church at 12427 S. Halsted Street is eligible under Criterion C for its architecture. The Halsted Rail Alternative corridor would be immediately adjacent to the property.

Although the church would not be demolished as a result of implementing the Halsted Rail Alternative, the elevated track structure would be located a few feet from the facade. This resource would be subject to an adverse visual impact due to construction of the Halsted Rail Alternative and an adverse noise impact due to its operation, which would alter the feeling and setting associated with the quieter atmosphere anticipated within a religious building. With the installation of noise walls, the severity of the noise impact would be reduced. Short-term effects due to construction activities may also lead to adverse effects, depending on the construction techniques employed. Vibratory effects would not affect the characteristics that qualify the resource for inclusion on the NRHP. The finding is that the Halsted Rail Alternative would have an adverse effect on this resource.

Cedar Park Cemetery Gatehouse and Entryway: Adverse Effect

The Cedar Park Cemetery entryway and gatehouse, at 12540 S. Halsted Street, is NRHP-eligible under Criterion C for its architecture. The Halsted Rail Alternative corridor would be immediately adjacent to the property.

Although the entrance would not be demolished as a result of implementing the Halsted Rail Alternative, the elevated track structure would be located a few feet in front of the resource. This resource would be subject to an adverse visual impact due to construction of the Halsted Rail Alternative. Short-term effects due to construction activities may also lead to adverse effects, depending on the construction techniques employed. Noise and vibratory effects would not affect the characteristics that qualify the resource for inclusion on the NRHP. The finding is that the Halsted Rail Alternative would have an adverse effect on this resource.

6.6.2 119th Street Yard and Shop

The fire station at 931 W. 120th Street lies within the footprint of the proposed yard. The Fire Department Engine Company 115 is eligible under Criterion C for its architecture. Although the fire station would not be demolished as a result of implementing the alternative, it would be surrounded by track on three sides, in close proximity to the west. This resource would be subject to an adverse visual impact due to construction of the Halsted Rail Alternative. Short-term effects due to construction activities may also lead to adverse effects, depending on the construction techniques employed. Neither noise nor vibratory effects would affect the characteristics that qualify the resource for inclusion on the NRHP. The finding is that the Halsted Rail Alternative would have an adverse effect on this resource.

Section 7

Effects Remaining After Mitigation

Due to the scale and proximity of construction of the Halsted Rail Alternative, it is unlikely that the anticipated adverse effects on these resources could be resolved; however, consultation with the SHPO and other interested parties may identify measures to mitigate effects. This may include, but would not be limited to, structural documentation, interpretative signage, further study to identify noise mitigation options for the church, and special provisions regarding construction in the vicinity. Measures mentioned by consulting parties at the May 2014 effects meeting included reconsidering the design and scale of proposed garages and incorporating the former Classic Revival substation into the Halsted 103rd Street Station designs.

Table 7-1 summarizes the effect findings following consultation with the SHPO and consulting parties. Properties are rated as experiencing No Effect (NE), No Adverse Effect (NAE), or an Adverse Effect (AE) as defined under the NHPA.

Table 7-1: Effects Findings

NRHP Eligible Resource	No Build	Bus Rapid Transit	Union Pacific Railroad Rail	Halsted Rail
Bethany Reformed Church Manse, 3 W. 111th Place	NE	NE	NE	NE
Eclectic Neo-Traditional Home, 444 W. 100th Place	NE	NE	NE	NE
Fire Department Engine Co. 93, 324 W. 104th Street	NE	NE	NE	NE
Roseland Pumping Station, 351 W. 104th Street	NE	NE	NE/NAE ¹	NE
Romanesque Revival Church, 10920 S. Princeton Avenue	NE	NE	NE	NE
Roseland Community Hospital Nurses Home, 11321 S. Wentworth Avenue	NE	NE	NE	NE
Former Venetian Hall, 133-139 E. Kensington Avenue	NE	NAE	NE	NE
Altgeld Gardens Housing Project	NE	NE	NE/NAE ²	NE
Green Street Historic District	NE	NE	NE	NAE
Former Classic Revival Substation, 10227 S. Halsted Street	NE	NE	NE	AE

Cedar Park Cemetery Entryway and Gatehouse, 12540 S. Halsted Street	NE	NE	NE	AE
Fire Department Engine Co. 115, 931 W. 120th Street	NE	NE	NE	AE

NE = No Effect; NAE = No Adverse Effect; AE = Adverse Effect

¹ No Effect finding for ROW and West Options; No Adverse Effect for East Option

² No Effect finding for South Station Option; No Adverse Effect for West Station Option

Section 8

Section 106 Consultation Process

In accordance with requirements for consultation established in Section 106 of the NHPA, four distinct rounds of coordination occurred during the RLE Project: initiation activities, identification of historic properties, assessment of effects, and resolution of adverse effects. Each outreach effort is described in the following sections.

8.1 Initiation Activities

8.1.1 Invitations to Participate

In August 2012 FTA sent invitation letters to 11 Native American tribes to inform them of the process and request assistance in identifying areas with potential cultural and/or religious significance. Letters were sent to the following nations: the Ho-Chunk Nation, the Miami Tribe of Oklahoma, the Peoria Tribe of Indians of Oklahoma, the Sac and Fox Nation of Oklahoma, the Pokagon Band of Potawatomi Indians, the Prairie Band of the Potawatomi Nation, the Citizen Potawatomi Nation, the Forest County Potawatomi Nation, the Potawatomi Nation, the Sac and Fox Nation of Mississippi in Iowa, and the Sac and Fox Nation of Missouri.

Also in August 2012, CTA sent invitation letters to 20 state and local level preservation interest groups to inform them of the project and invite them to participate in the upcoming consultation process. Invitation letters were sent to the following groups: the SHPO, the Advisory Council on Historic Preservation, the Illinois State Museum, Illinois State Archaeological Survey, the City of Chicago Historic Preservation Division Department of Housing and Economic Development, Preservation Chicago, Landmarks Illinois, the Chicago Historical Society, the Ridge Historical Society, the Beverly Area Planning Association, the East Beverly Association, the Rosemoor Community Association, the Cottage Grove Heights Community Coalition, the Historic Pullman Foundation, the South Suburban Genealogical and Historical Society, Chicago Neighborhood Initiatives, Neighborhood Housing Services of Chicago, Mercy Housing Lakefront, and Friends of the Parks. Nine groups indicated they would like to participate in the process. Accordingly, materials and meeting notices were sent to the SHPO, the City of Chicago Historic Preservation Division Department of Housing and Economic Development, Preservation Chicago, Landmarks Illinois, the Ridge Historical Society, the Rosemoor Community Association, Chicago Neighborhood Initiatives, and Friends of the Parks. The list of organizations that accepted the invitation to participate in the consultation process is included in **Appendix C**.

8.1.2 Section 106 Kickoff Webinar

On October 24, 2012, a kickoff webinar was held. The webinar included an overview of the Section 106 process, a description of the project and the build alternatives, and an outline of the schedule for the consultation process over the coming months. A full summary of this meeting is provided in **Appendix C**.

8.2 Identification of Historic Properties

On January 30, 2013, the project team held a meeting at CTA to discuss the identification of historic properties, specifically those that were recommended as eligible for listing on the NRHP. A CD containing a summary table, maps of the resources, and individual site forms was mailed to consulting parties on January 5, 2013. A full summary of the meeting is provided in **Appendix C**. The meeting was followed by an informal tour of the corridor that afternoon.

As part of this phase of coordination, written comments were received from six consulting parties. A summary of these comments and copies of the individual letters are included in **Appendix C**.

8.3 Assessment of Effects

On May 8, 2014, the project team held a meeting at CTA to discuss potential project effects on NRHP historic properties. A Draft Effects Report was mailed to consulting parties on April 18, 2014, requesting any written comments by May 23, 2014. A full summary of the meeting is provided in **Appendix C**.

As part of this phase of coordination, written comments were received from four consulting parties. A summary of these comments and copies of the individual letters are included in **Appendix C**.

8.4 Resolution of Adverse Effects

This stage of consultation has not yet occurred.

<p>Prepared By: J. Martinez, M. C. Bird, J. Guarino</p> <p>Photo By: S. Katz</p> <p>Date: 31 October 2012</p>	
<p>Property Description:</p> <p>This one-story brick bungalow in the Washington Heights community is clad with tan face brick on its front elevation, common brick on its side elevations, and synthetic siding on its rear elevation. It has a steeply pitched hip roof covered with asphalt shingles and synthetic-clad, hip roof dormers with paired one-over-one windows on both the front and rear elevations. The front elevation has a recessed corner porch with round-arch opening, low brick sidewalls, and concrete steps. The residence also includes a door tucked into the side of the living room bay and four one-over-one windows, three of which are grouped together under a segmental arch. All windows are modern replacements with aluminum sashes. This house lacks distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This two-story, brick clad house in the Washington Heights community is situated on a raised brick basement with glass block windows. The house has a hip roof covered with asphalt shingles. Its front elevation has a partial-width, hip roof, brick clad, enclosed porch with a metal storm door. It has concrete steps, metal railings, a pair of windows on the first floor and two single windows on the second floor. Windows throughout the house are non-original one-over-one aluminum-sash. Detailing includes concrete sills and orange brick banding that contrasts with the brown face brick cladding. It does not feature distinguishing architectural elements and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This one-story house in the Washington Heights community is clad with polychromatic brick and has a side-gabled roof covered with asphalt shingles. End gable walls are clad in aluminum siding. Its front elevation features a gabled pavilion with a strip of three non-original one-over-one aluminum-sash windows and a gabled entrance vestibule featuring a wood door with diamond pane window, concrete steps, and metal railings. A single non-original one-over-one aluminum-sash window is located in the corner of the front elevation. A small ventilating louver is situated in the gable. Detailing includes concrete sills and lintels with keystones. This house does not display distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description: This one-story house in the Washington Heights community sits on a raised basement. It is clad with polychromatic brick and has a side gabled roof covered with asphalt shingles. Its front elevation has a gabled living room bay pavilion with paired basement windows that appear to be casements. There is a group of three non-original one-over-one windows with concrete sills and brick arch lintels that are separated by colonettes with acanthus leaf capitals. A small round-arched window is located in the gable. The house has a recessed corner porch with a metal storm door, round-arch openings, a Neo-Gothic castellated top, concrete steps, and brick sidewalls. This house has very good integrity in terms of its materials and detailing, and its Eclectic Neo-Traditional ornamentation makes it stand out among the vernacular, stripped-down brick and frame bungalows and cottages that comprise the predominant building stock in the Washington Heights community. As a result, it is recommended as individually eligible for National Register listing under Criterion C for architecture.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This one-story house is situated on a raised basement. It has a rectangular footprint, a hip roof covered with asphalt shingles, and overhanging eaves. Its front façade is clad in buff face brick and has a strip of three windows, which appears to be one large picture window flanked by double-hung windows, beneath a metal awing. The off-center metal core front door is accessed via a flight of concrete steps with metal railings. Two large decorative glass blocks are situated next to the door. The side elevations are clad in common brick. This home does not have distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Prepared By: J. Martinez, M. C. Bird, J. Guairno</p> <p>Photo By: S. Katz</p> <p>Date: 10 October 2012</p>	
<p>Property Description:</p> <p>This one-story house in the Washington Heights community is situated on a raised basement with glass block windows. It is clad with brown brick and has a hip roof covered with asphalt shingles and overhanging eaves. There are hip-on-gable dormers on the front and side elevations, each of which has a strip of non-original one-over-one aluminum-sash windows. The house features a recessed corner porch with a single-light oak door, concrete steps, low brick sidewalls, and a brick corner pier. The front elevation's rounded living room bay has a series of casement windows and transoms. Detailing includes a brickwork soldier course above windows with decorative stone insert blocks and concrete sills. This is a good example of a brick Chicago Style Bungalow, a building type that was produced in the thousands throughout the city's undeveloped areas and in nearby suburbs during the 1910s and 1920s. This house does not feature sufficient distinguishing architectural features to be individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Architectural Style: Craftsman</p>	<p>Stories: 1</p>
<p>Property Description:</p> <p>This one-story Craftsman bungalow is situated at the southwest corner of 103rd Place and Princeton Avenue in the Roseland community. It has a hip-on-gable roof covered with asphalt shingles and overhanging eaves with decorative knee braces located on the front gable section of the roof. The central portion of the house retains its original wood clapboard siding; the areas above and below are clad with wood shingles. Its 103rd Place elevation has a strip of three one-over-one windows, a strip of three casements, and a strip of three windows in the gable that appear to be casements. Its Princeton Street elevation has a metal storm door topped by a gabled hood with two knee braces, glass block basement windows, a strip of three one-over-one windows, a single one-over-one window, and a pair of casements. This house does not have sufficient distinguishing features to qualify as individually eligible for listing on the National Register.</p>

<p>Prepared By: J. Martinez, M. C. Bird, J. Guarino</p> <p>Photo By: Steve Katz</p> <p>Date: 24 September 2012</p>	
<p>Property Description: The two-story commercial portion of this building is identified as a “Hay, Grain & Feed” shop in the 1905 Sanborn while the one-story portion is identified as used for related storage. The buildings were joined at a later date. Both are clad in brown face brick and have flat roofs and parapets. The two-story section has an off-center entrance with an original wood door, sidelights, transom, and a stone surround with cornice, as well as a metal cornice. The glass panes in the sidelights and door have been removed and their openings in-filled with wood. It has bay windows on the first and second floors and an additional window opening above the entrance bay. All windows are comprised of one-over-one wood-sash. Detailing includes brick banding and a stone cornice. The one-story part has altered door and window openings, including one large window opening that has been in-filled with glass blocks. Side elevations are clad in common brick. This structure lacks architectural distinction and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

The building has a hip-on-gable roof covered with asphalt shingles. The front elevation has a recessed corner porch with wood steps, metal railings, and an open metal corner post. Additional features include a front door tucked into the side of the living room bay, a casement window, a strip of four non-original one-over-one aluminum-sash windows on the first floor, and a strip of three single-pane casement windows in the gable. This house lacks distinctive architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Prepared By: J. Martinez, M. C. Bird, J. Guarino</p> <p>Photo By: Steve Katz, HAARGIS</p> <p>Date: 24 September 2012</p>	<p>Property Description:</p> <p>The two-story Prairie style Roseland Pumping Station is clad in brown brick. It has a high limestone watertable, a flat roof, parapet, and two square towers at the corners of the front (Roseland) elevation. The front elevation features a projecting, two-story flat-roofed entrance pavilion with a pair of centrally located glass double-doors, sidelights, and a stone panel above that features the City of Chicago's "Y" emblem in metal. The entrance has a smooth stone surround. Above the entrance is a limestone panel incised with the words: "City of Chicago Roseland Pumping Station." Detailing on the entrance pavilion includes brick pilasters with stone bases, coping, and geometric motifs. The parapet is clad in limestone and features decorative geometric motifs. The building's fenestration is largely comprised of multi-paned steel sash windows, some of which have transoms.</p> <p>Stories: 2</p> <p>This is an excellent intact example of a community pumping station with fine integrity that still functions in its original use. It is recommended as individually eligible for the National Register under Criterion C for architecture as a well-preserved example of a community pumping station designed in the Prairie style.</p>

<p>Property Description:</p> <p>This one-and-a-half-story house in the Roseland community is situated on a raised concrete block basement with glass block windows and is clad with synthetic siding. The building has a front gable roof covered with asphalt shingles. Its front elevation has a pent roof, off-center door with a metal storm door, concrete steps with metal railings, a large picture window on the first floor, and a pair of non-original one-over-one aluminum sash windows in the gable. Its east elevation has a three-sided window bay with a projecting gable wall dormer directly above. This house lacks integrity and distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1.5</p>

<p>Property Description:</p> <p>This building consists of a central, hipped-roof, brick clad structure on a raised basement that was constructed in 1914. Later, shed-roof, vinyl clad additions were constructed on the front and rear of the central brick portion. The front elevation features an off-center porch with concrete steps, metal railings and supports topped by a metal awning roof. It also has a hollow metal front door and a five-sided bow window. This home lacks both integrity and architectural distinction and is not individually eligible for listing on the National Register.</p>

<p>Property Description:</p> <p>This one-story commercial building in the Roseland community has a flat roof, castellated parapet, a brick panel at the cornice line, and concrete coping. Its front elevation is clad in yellow face brick and has a recessed, off-center hollow core metal door that is non-original. Aluminum siding has replaced this door's original transom and its original storefront has been in-filled with a strip of fixed pane windows with aluminum siding above and below. The north portion of its east elevation is also clad in yellow face brick and has been altered with the insertion of an overhead metal door that is surrounded by aluminum siding. This building lacks integrity and distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This one-and-a-half-story frame house in the Roseland community is situated on a raised concrete block basement with glass block windows and is covered with synthetic siding. The building has a cross-gable roof covered with asphalt shingles. The front elevation has an off-center door behind a metal storm door, non-original wood steps and railings, and five non-original one-over-one aluminum-sash windows: four on the first floor and one in the gable. Review of the 1938 Sanborn and the assessor's 2007 photograph suggests that while the front and rear porches are original to the house, a second story was added to the residence between 1938 and 2007. This house lacks integrity and distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1.5</p>

<p>Property Description:</p> <p>This property includes a two story, flat-roofed concrete block building associated with South Shore Iron Works, manufacturers of structural steel. The building is difficult to see from the public right-of-way. The first floor has one-over-one windows below a metal awning and the second floor has glass block windows. Portion of the building has had its roof raised, creating more height for the interior workspace. The Cook County Assessor's photo shows large sliding metal doors on the warehouse façade. This structure lacks architectural distinction and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This three-story apartment building at the northwest corner of 111th Place and State Street in the Roseland community is situated on a raised basement and is clad with brown face brick on its two street elevations. The building has a flat roof and a shaped parapet above the three-story enclosed full-height sun porch pavilion along its south (111th Place) elevation. Each floor on this elevation has a window group comprising a picture window flanked by one-over-one windows. The front (State Street) elevation has a hollow core metal door with a stone surround; each floor has a series of single one-over-one aluminum-sash windows. The door and windows are non-original. Detailing includes concrete sills, sill courses, insert blocks, and coping. This building lacks distinctive architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 3</p>

<p>Property Description:</p> <p>This Craftsman house at the southwest corner of 111th Place and State Street in the Roseland community sits on a raised basement and is clad with brown face brick. The building has a hip roof covered with asphalt shingles, overhanging eaves with knee braces, and a hip dormer along the 111th Place elevation. The main block of the house has two additions: a one-story Gothic Revival style east wing with a flat roof and battlemented parapet and a one-story hipped-roof sun porch to the west that is surrounded by double-hung windows. Both wings are also clad in brown face brick. The home's front elevation (111th Place) has a centrally-located single-light wood door with sidelights, brick piers, concrete steps with low brick sidewalls, and a flat-roofed wood canopy. The front entrance is flanked on either side by a group of three windows: a picture window flanked by double-hung windows. The second floor of the front elevation features a series of double-hung windows. The front elevation of the Gothic Revival style wing has an off-center metal storm door with slit windows on either side, as well as a picture window flanked by double-hung windows. The door and window group have stone quoins and drip molding. Detailing also includes stone insert blocks.</p> <p style="text-align: right;">Stories: 2</p>

residence is recommended as individually eligible for National Register listing under Criterion B due to its association with Reverend Harry J. Hager (1899-1983), a pioneer in media evangelism in Chicago during the mid-twentieth-century. Rev. Hager served as pastor of the adjacent Bethany Reformed Church for 44 years (1929-1975). He was a pioneer in the emerging media ministry, beginning in 1933 with the weekly Bethany Bible Broadcast on the FM station WHIP. Starting in 1944, Rev. Hager's preaching reached a national audience when Chicago's high-powered AM station WCFL began broadcasting his Sunday evening services across America.

<p>Property Description:</p> <p>This one-story Craftsman style house in the Roseland community is situated on a raised concrete block basement and is covered with synthetic siding and wood shingles. The building has a side hip-on-gable roof, overhanging eaves. There are decorative wood brackets and a hip-on-gable dormer with bracketed, overhanging eaves. There are three double-hung wood-sash windows with aluminum storms in the gable. Asphalt shingles clad the roof and the dormer. The roof has a wide overhang that serves as the roof for a full-width wood porch that has faux stone piers and wood railings, but no steps. The front elevation has a centrally located door that appears to be oak with a glass pane, which is flanked by three windows on either side, all of which are double-hung wood-sash with aluminum storms. This house lacks distinguishing architectural features and is not individually eligible for listing on the National Register.</p>

<p>Property Description:</p> <p>This two-flat greystone residential building in the Roseland community has a flat roof and parapet. Its front elevation features a full-height window bay pavilion with fenestration comprised of one-over-one replacement windows. It has an off-center porch with two entrances that feature non-original wood doors, stone steps, metal and stone railings, and wood columns supporting a flat wood roof with dentil molding. Detailing includes a stone sill courses, lintels, beltcourses, and cornice.</p> <p>Stories: 2</p> <p>The City of Chicago has recognized this building type through its Historic Greystone Initiative, which promotes the preservation of Chicago's ornate, limestone-clad homes by offering technical assistance and financial resources to property owners. Although this is an example of the greystone residential building type, it does not possess sufficient distinguishing architectural characteristics to qualify as individually eligible for listing on the National Register.</p>

<p>Property Description:</p> <p>This two-story, brick-clad, light industrial building in the Roseland community has a flat roof, parapet with coping, and a T-shaped footprint. The front segment of the building was a one-story building erected in 1908. Sometime after 1939, a second story and a rear wing were added. The original segment has an off-center door and the outline of three former window openings (with brick arched lintels and stone sills) that have been in-filled with brick. The second floor and the rear wing have glass block window openings with small ventilating louvers. This building lacks integrity and distinguishing architectural features; it is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description: This two-story residential building in the Roseland community has a flat roof and crenellated parapet with concrete coping. Its front elevation is clad in brown face brick and its side elevations are clad in common brick. The front elevation features two hollow core metal doors, the outline of a former storefront that has been in-filled with faux stone and two glass block windows, and six three-over-one wood-sash windows on the second floor. The original off-center entrance that provides access to the second floor apartment has a transom that is in-filled with faux stone. Detailing includes a concrete sill course, inset brick panels, and a parapet that features small decorative concrete insert blocks and a centrally located stone panel with shield. This building lacks integrity and does not have sufficient distinguishing architectural features to qualify as individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This one-story house at the southwest corner of 114th Street and Yale Avenue in the Roseland community is situated on a raised brick basement and is clad with yellow face brick along its street elevations. The building has a hip roof covered with asphalt shingles and overhanging eaves. The front elevation has a picture window flanked by one-over-one aluminum-sash windows and an off-center door. This elevation also has a partial-width porch with open metal posts covered by the wide roof overhang, concrete steps, and metal railings. Detailing includes stones flanking the front door and decorative glass blocks on both street elevations. This house lacks distinctive architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This two-story Queen Anne style commercial building at the southwest corner of 115th and State streets in the West Pullman community is clad with brick and has a flat roof and parapet. The first floor of both street elevations has been drastically altered by the removal of the corner storefront and the infill of virtually all door, window, and round-arch transom openings with brick. The first floor of the front (115th Street) elevation currently features a single, non-original, off-center hollow core metal door. The first floor of the State Street elevation has a centrally-located non-original hollow core metal door and a single non-original one-over-one aluminum-sash window. The second floor, however, retains its original metal corner turret with conical roof and a three-sided metal window bay on the State Street elevation. Both bays have rectangular panels at their bases and dentil molding, and the turret features decorative pilasters. However, the windows in both the bay and turret are non-original. The second floor of the 115th street elevation has a non-original glass block window and an aluminum-sash window, both of which have stone sills and lintels. The second floor of the State Street elevation has a series of non-original one-over-one aluminum-sash windows with rounded transoms that have been in-filled with brick. This building lacks integrity and is not</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This two-and-a-half-story frame house in the West Pullman community is clad in rusticated concrete block on the first floor and in synthetic siding above. The building has a front gable roof with asphalt shingles. It has a two-story full-width, hip-roof wood porch/balcony with faux stone piers and wood posts as supports on the first and second floors, respectively. A non-original stairway leads to the second floor balcony. Both first and second floors have off-center non-original hollow core metal doors. Windows on the front elevation are non-original and include one on the first floor that is obscured by the staircase, a picture window flanked by one-over-one aluminum-sash windows on the second floor, and a single one-over-one aluminum-sash window in the gable. This house lacks integrity and distinctive architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2.5</p>

<p>Property Description:</p> <p>This one-and-a-half-story frame house in the West Pullman community is situated on a raised concrete block basement with glass block windows. It is clad with synthetic materials and has a gable roof covered with asphalt shingles and gable dormers along the side elevations. The front elevation has a strip of three windows on the first floor and one in the gable, all of which are non-original one-over-one aluminum-sash. The front door has been moved to the side elevation. This house lacks integrity, does not have distinguishing architectural features, and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1.5</p>

<p>Property Description:</p> <p>This one-story frame bungalow in the West Pullman community sits on a raised concrete block basement with sliding windows and is covered with synthetic siding. The building has a hip roof covered with asphalt shingles, a gable dormer, and overhanging eaves. The front elevation has a recessed corner porch with low synthetic-clad sidewalls, a squat wood post supporting the corner, and wood steps. The front door is on the west wall of the living room bay. Windows on the front elevation are non-original and include four one-over-one aluminum-sash—a strip of three in the living room bay and one in the recessed porch—and a strip of four single-pane windows in the gable dormer. The east elevation has a gabled through-the-cornice wall dormer. This house lacks integrity and distinctive architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description: This two-story house at the southwest corner of 118th Street and Emerald Avenue in the West Pullman community is clad with orange-brown face brick and is situated on a raised basement with glass block windows. The building has a gable-on-hip roof covered with asphalt shingles. Its front elevation has a full-width shed-roof porch with brick piers. The areas between the piers have been in-filled with synthetic siding and non-original single-pane windows. A non-original hollow core metal door with metal awning is located on the wood-covered north side of this porch and accessed via concrete steps. The second floor of the front elevation has two one-over-one windows and an additional window is located in the synthetic-clad gable. The east elevation has a full-height rounded window bay pavilion topped by a conical roof. Side elevation windows are non-original one-over-one aluminum-sash. A stringcourse with brick dentils is situated near the roofline and extends around the building. This house lacks integrity and distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This one-story house in the West Pullman community is covered with synthetic siding and has a gable roof covered with asphalt shingles. Its front elevation has a partial-width hip-roof porch with metal posts and a hollow core metal door. Windows are non-original and include a picture window flanked by one-over-one aluminum-sash windows on the first floor, and a pair of one-over-one aluminum-sash windows in the gable. Both sets of windows are partially obscured by low metal awnings. The porch steps and railings are obscured by foliage. This house lacks integrity and distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This two-story brick-clad building in the West Pullman community has a flat roof and parapet. Its storefront area has been in-filled with faux stone, a non-original door, and a small window. A secondary off-center non-original hollow core metal door that provides access to the second floor apartments is flanked by original buttresses and topped by small arches, the interiors of which have been in-filled with wood. The second floor has two pairs of windows that appear to be casements. Detailing includes a belt course, cornice, finial-like molding flanking the second story windows, and a continuous arcade across the parapet level, the openings of which have been in-filled with wood. This building lacks integrity and distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This one-story commercial building in the West Pullman community has a flat roof, parapet, and a pent roof across the length of the front elevation. The front façade is clad with white glazed brick on its east side and in pale yellow brick on its west side. The front elevation features a series of tall windows that are trimmed in green brick and have been in-filled, some with glass block and some with brick. The windows are topped by decorative round-arches of green bricks with stone keystones. The building has a hollow core metal double-door with a Classical stone surround comprising fluted pilasters and entablature. Two non-original overhead garage doors have also been inserted into the front elevation, one of which has replaced two window openings. This building lacks integrity and distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This one- story cottage in the West Pullman community is situated on a raised concrete block basement and is clad with wood boards laid vertically. The building has a front gable roof covered with asphalt shingles. The front elevation has a full-width, hip-roof wood porch with straight railings and squared posts, a hollow core metal door, and three non-original one-over-one aluminum-sash windows—two on the first floor and one in the gable. This house lacks distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Prepared By: J. Martinez, M. C. Bird, J. Guarino</p> <p>Photo By: S. Katz</p> <p>Date: 23 October 2012</p>	
<p>Property Description:</p> <p>This one-story frame cottage in the West Pullman community is situated on a raised basement and is covered with stucco. The building has a front gable roof covered with asphalt shingles and a gable dormer along its south elevation. It has a partial-width flat-roofed porch that appears to be concrete, with solid sidewalls, straight posts, and a stepped parapet. Its front elevation has an off-center non-original hollow core metal door and a three-sided window bay with single-pane window and transom in the center flanked by one-over-one aluminum-sash windows. There is a pair of sliding aluminum-sash windows in the gable with a lunette fixed-pane window above. Windows are modern replacements. While the stucco cladding is somewhat unusual for this community's housing stock, this particular house lacks integrity as well as architectural features that are distinctive enough to merit individual inclusion on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This two-story cottage in the Washington Heights community has a gable roof covered with asphalt shingles and large, non-original, flat-roofed, aluminum-clad dormers on both side elevations transforming the original one-story building into a two-story residence. The front elevation is clad with orange face brick, the gables are clad with aluminum siding, and the lower side elevations are clad with common brick. The front elevation has a centrally located hollow core metal paneled door with fanlight, three concrete steps with metal railings, two pairs of windows on the first floor and a single window in the gable. Windows are non-original one-over-one aluminum sash. The front door and windows are sheltered by metal awnings. Detailing includes concrete sills and brick lintel arches. This house does not feature distinguishing architectural elements or sufficient integrity to be individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This one-story bungalow at the northwest corner of Eggleston and 101st Street in the Washington Heights community is situated on a raised basement and is clad with brown face brick along its two street elevations. It has a hip roof covered with asphalt shingles and hip dormers along both its front and rear elevations. Its front elevation has a curved window group in the basement level with frosted glass casement windows. It has a recessed corner porch with carpeted concrete steps and corner brick pier support, a metal storm door, and a projecting living room bay with one-over-one windows that are partially obscured by a low metal awning. Detailing includes stone block inserts and a planter box. Its 101st Street elevation has glass block basement windows and one-over-one windows on the first floor. This house does not have sufficient distinguishing features to qualify as individually eligible for listing on the National Register.</p>

<p>Property Description:</p> <p>This one-story frame cottage in the Washington Heights community is situated on a raised concrete block basement with glass block windows. It is clad with wood boards laid vertically and has a gable roof covered with asphalt shingles. There is decorative vertical stickwork in the gable. The residence has a recessed corner porch with a hollow-core metal paneled door, concrete steps, and non-original wood railings and posts. A picture window is on the front elevation and one-over-one aluminum-sash windows on the side elevations (non-original). This house does not feature distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This one-story Craftsman style bungalow in the Roseland community is situated on a raised brick basement and is clad with wood clapboards with wood shingles in the gabled ends. The building has a front gable roof covered with asphalt shingles and overhanging eaves with exposed rafters and decorative knee braces. The front elevation features a partial-width, front-gable, wood porch with squat, squared Doric columns and a boxed cornice. The porch door and adjacent window opening are covered with plywood. There is a group of four one-over-one windows on the first floor and a pair of original wood casement windows in the attic. This is an example of a Craftsman bungalow, an exceedingly common style during the 1910s and 1920s but lacks distinctive architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description: This two-story brick-clad bungalow in the Roseland community is situated on a raised basement. The building has a hip roof covered with asphalt shingles, overhanging eaves, an aluminum-clad gable dormer with a strip of single-pane sliding windows partially covered by a metal awning. A two-story aluminum-clad gable-roof second story addition is visible. The three-sided front elevation encompasses the living room bay and features a central strip of three windows and flanking single windows, all of which are non-original one-over-one aluminum sash. The front door is situated along the south elevation and has a metal awning. Detailing includes concrete sills, sill courses, and decorative insert blocks flanking the central strip of windows. This is an example of a Chicago bungalow, a building type that the City of Chicago has recognized through its Historic Chicago Bungalow Initiative. However, this house has been modified with the second story addition, lacks distinctive architectural features, and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This one-story cottage in the Roseland community is situated on a raised basement with glass block windows and is clad with orange brick on the front elevation and common brick on the side and rear elevations. The building has a steeply pitched front gable roof covered with asphalt shingles. The front elevation has a pent roof, an off-center metal storm door surrounded by yellow brick, concrete steps with metal railings, and an adjacent glass block window. The projecting living room bay features a non-original picture window flanked by one-over-one aluminum-sash windows that are partially obscured by a low metal awning. This bay is clad in faux stone below the sill line. A pair of non-original one-over-one aluminum-sash windows is situated in the gable, and all windows have concrete sills. This house lacks distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Prepared By: J. Martinez, M. C. Bird, J. Guarino</p> <p>Photo By: S. Katz</p> <p>Date: 24 October 2012</p>	
<p>Property Description:</p> <p>This two-story asymmetrical French Eclectic style house in the Roseland community was built for Stuart Colman. It is clad with brownish-orange face brick. The building has a steeply pitched roof covered with slate, a pair of gabled pavilions along its north elevation, and an L-shaped footprint with a one-story side-gabled wing that features two flat-roofed dormers. The front elevation of the main block has two windows on the first floor that are obscured by metal grates and two through-the-cornice wall dormers with paired casement windows. The recessed front door has a smooth stone surround and a stone-clad upper story oriel is situated at the juncture between the front wing and its adjacent gabled pavilion. Attic windows in the paired gable pavilions are surrounded by stone quoins. Fenestration appears to be mainly casement windows. This is an unusual example of a French Eclectic style home in Roseland and stands as a visual landmark among the predominant building stock of cottages and bungalows. Although windows appear to be replacements, overall it has very good integrity and is recommended as individually eligible for National Register listing.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This two-story frame house in the West Pullman neighborhood is situated on a raised brick basement that has been covered with concrete. Above, the house is covered with synthetic siding. The building has a cross-gable roof covered with asphalt shingles. Its front elevation has a partial-width wood porch; its hipped-roof of which spans the full façade to also shelter the adjacent three-sided window bay, which has a central non-original fixed-pane window with transom flanked by non-original one-over-one aluminum-sash windows. The porch has an off-center non-original hollow core metal door with a transom, wood posts, steps and straight railings. There are two windows on the second floor of the front elevation and one in the gable, all of which are non-original one-over-one aluminum-sash. The south elevation has a two-story three-sided window bay. This house lacks integrity and distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This one-story Craftsman bungalow in the West Pullman community is situated on a raised concrete block basement and is covered with synthetic siding. The building has a hip roof covered with asphalt shingles, overhanging eaves, and a hip dormer with a strip of three single-pane sliding windows. The front elevation has a recessed corner porch with corner support consisting of a faux stone pier topped by a squat wood column, wood steps with straight wood railings, and an off-center hollow core metal door. There is also a strip of three double-hung wood-sash windows. This house lacks integrity and distinctive architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This concrete block, Quonset utility outbuilding in the West Pullman community is set back from the public right-of-way and has a front elevation with a centrally located garage door opening flanked by a one-over-one window on either side. The 1962 aerial photograph shows two buildings on the property, the extant Quonset and a larger building. The larger building was razed between 2007 and 2012. A one-story building and a trailer standing on the remaining concrete slab from the larger, razed building are also part of this complex but too far from the road for evaluation. Windows appear to be fixed-pane on all buildings within the complex. This building complex does not have distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

Details include an archway on the porch, decorative brickwork, and stone inserts above and below the window bay. This is an example of a brick “Chicago Style Bungalow,” a building type that the City of Chicago has recognized through its Historic Chicago Bungalow Initiative. However, this house lacks distinctive architecture features and is not individually eligible for listing on the National Register.	Stories: 1

<p>Property Description:</p> <p>This one-story brick-clad cottage at the northeast corner of Green and 100th streets in the Washington Heights community is situated on a raised basement and has a front gable roof covered with asphalt shingles. Its front elevation has a brick-clad gable entrance vestibule with a metal storm door topped by a metal awning and concrete steps with metal railings. Windows include a small glass block window by the door, a bow window with four casements on the first floor, and a single six-over-six window in the gable. Detailing includes decorative stones flanking the door and at the apex of the gable. The side (100th Street) elevation includes a flat-roof wall dormer with a small glass block window, a side door with a metal storm door, a concrete stoop with metal railings, and a metal awning. This house lacks distinctive architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

The building has a side-gable roof with asphalt shingles, overhanging eaves with the brackets removed, and a front-gable dormer with a strip of non-original one-over-one aluminum-sash windows. The front elevation is clad with faux stone and stucco. The roof extends forward to shelter a full-width porch that has faux stone corner piers, low sidewalls, and concrete steps. The centrally located front door is flanked by a strip of three double-hung non-original windows on either side. The side elevations are clad in brown brick and have stucco-covered gables. The south elevation has an original hip-roof living room bay, behind which is a synthetic-clad, two-story addition. This house lacks integrity and distinctive architectural features and is not individually eligible for listing on the National Register.</p>

<p>Property Description:</p> <p>This one-story brick-clad bungalow at the southeast corner of Green and 102nd streets in the Washington Heights community is situated on a raised basement with glass block windows. The building has a hip roof with asphalt shingles, overhanging eaves, and hip dormers with paired non-original single-pane sliding windows along its front and north elevations. The front elevation has a flat roof projecting living room bay surrounded by non-original double-hung windows, the central grouping of which is partially covered by a metal awning. It also has a decorative off-center metal storm door with a metal awning, concrete steps with low brick sidewalls, and metal railings. Detailing includes brick panels along the base of the living room bay, soldier brick lintels, and square concrete insert blocks used as decorative accents. This is an example of a Chicago Style Bungalow, a building type that the City of Chicago has recognized through its Historic Chicago Bungalow Initiative. However, this house lacks distinctive architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This one-story brick-clad cottage in the Morgan Park community is situated on a raised basement with glass block windows and has a steeply pitched side-gable roof. Its front elevation has a slightly projecting brick-clad gabled entrance vestibule with a metal storm door and a small adjacent glass block window. The porch has concrete steps, metal railings, open metal supports and metal awning roof. This elevation has a picture window flanked by double-hung windows that are partially obscured by a low, metal awning. Detailing includes decorative stone flanking the door and used as accents on the entrance vestibule. It does not display distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This one-story, brick clad house in the Morgan Park community is situated on a raised basement with glass block windows. The building has a hip-on-gable roof with a gable garage facing the street. The house's front entrance is located within a vestibule that is topped by a shed-roof, is brick-clad, and is located in the ell created by the main section of the house and the gable garage. It has a hollow core metal door, concrete steps, and metal railings. The front elevation has a non-original aluminum-clad first floor bay window and two additional pairs of non-original aluminum-sash windows: one on the first floor and one in the gable. The north elevation has an overhead garage door and a one-over-one aluminum-sash window. Detailing includes decorative stonework at the corners of the house, vertical half-timbering in the north gable (much of which has been removed), and concrete sills. This house does not feature sufficient distinguishing architectural features to qualify as individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This one-story frame cottage in Calumet Park is situated on a raised concrete block basement with glass block windows and is covered with synthetic siding. The building has a front gable roof with asphalt shingles. The front elevation has a full-width, hip-roof wood porch with metal railings and open metal supports, an off-center metal storm door, a picture window flanked by one-over-one aluminum-sash windows, and a single one-over-one aluminum-sash window in the gable. Windows are modern replacements. This house lacks integrity and distinctive architectural features; therefore, it is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This one-story brick-clad house in the West Pullman community has a side gable roof covered with asphalt shingles. The front façade has a centrally located door and an asymmetrical array of windows—a sliding window on one side with a picture window flanked by one-over-one sashes on the other side. Fenestration on the side elevation is comprised of a one-over-one window, a single-pane window, and sliding windows in the gable. This standard post-WWII home does not feature any distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Prepared By: C. Tolmie, M. C. Bird, J. Guarino</p> <p>Photo By: S. Katz</p> <p>Date: September 2012</p>	
<p>Property Description:</p> <p>This vacant, two-story, Classical Revival style substation building in the Washington Heights community has a stone water table and a flat roof with parapet. The front façade is clad with dark brown-colored brick that accents the façade with stringcourses, soldier courses, and cruciform patterns against the reddish brown-colored brick. The sides and rear feature common brick. The front elevation features a centrally located entrance with a Classical surround that includes Ionic columns and an entablature with a segmental pediment and frieze band with incised lettering that reads, "Southwest Substation." The original door, sidelight and transom have been removed and their openings covered with plywood. Directly above the entrance is a strip of three plywood-covered window openings with stone casing. Decorative detailing includes full-height brick corner pilasters, a stone belt course above the windows, and a stone cornice with widely spaced dentils. Directly beneath the cornice is a stone panel with incised lettering that reads, "City of Chicago Dep't of Gas & Electricity." Nearly all of the side elevation window openings are covered with plywood. This is a rare extant example of a Classical Revival substation building in the Washington Heights community. It has retained its decorative detailing, and it is possible that original windows may be extant behind the</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This one-story commercial building at the southwest corner of Halsted and 112th streets in the Morgan Park community is clad with yellow brick along its two street elevations. The building has a granite water table, a flat roof, and a crenellated parapet with terra cotta coping. The central section of the Halsted elevation is covered with wood boards laid vertically and spanned by a horizontal strip of rectangular single-pane windows. This elevation has doors on either end that are surrounded by cream-colored terra cotta and topped by ogee arches. The 112th Street elevation has three garage door openings and glass block windows. The storefronts have been completely altered and in-filled. Detailing includes terra cotta finals, decorative panels, and banding at the parapet level. This building lacks integrity and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This one-story brick-clad bungalow in the West Pullman community is situated on a raised basement and has a hip roof covered with asphalt shingles, a hip dormer, and overhanging eaves. The front elevation has a recessed corner porch with a metal storm door, low brick sidewalls, a corner brick pier support, and concrete steps with metal railings. Windows on the front elevation include a non-original picture window flanked by one-over-one aluminum-sash windows in the living room bay, and a strip of three window openings in the dormer. The house has a synthetic-clad addition at the rear. Detailing includes square insert blocks used as decorative accents and concrete sills. This is an example of a Chicago bungalow, a building type that the City of Chicago has recognized through its Historic Chicago Bungalow Initiative. However, this house lacks distinctive architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

Abram Van Etten and his partner George Galloy established the stone fabricating company in 1899. Located in a community that experienced a collapse of its industrial base in the 1970s and considerable disinvestment since that time, the building serves as an important, and rare, example of an early twentieth-century industrial building in West Pullman that retains its original use and ownership. It retains the majority of its original materials with the exception of fenestration along Halsted Street, where it appears that the windows have either been covered or removed.

<p>Property Description:</p> <p>This one-story frame house in the West Pullman community has a raised brick basement and is covered with synthetic siding. The building has a front gable roof covered with asphalt shingles. Its front elevation has a full-width hip-roof wood porch that contains a gable accent above the door. The porch roof is supported with straight posts and railings, and an off-center door and two one-over-one windows on both the raised basement and the first floor levels. The first floor door has a transom: both the door and first floor windows retain their original wood casings with pilasters and cornices. An octagonal ventilating louver is situated in the gable. This house lacks integrity and distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This two-story mixed-use building at the northwest corner of Halsted and 120th streets in the West Pullman community has a flat roof and shaped parapet with stone inserts and brick stringcourses. The building fabric at the street corner of the first floor has been removed so that the non-original corner door, which is covered in metal, is deeply recessed. A secondary entrance at the opposite end of the front elevation features a hollow core metal door and transom in-filled with wood and is flanked by original brown brick cladding. The remainder of the first floor along both street elevations features non-original brick cladding. The second floor of the front elevation features a large fixed-pane window flanked by casements and a separate pair of casements, all of which are non-original. Windows and door openings along the 120th Street elevation have been altered and the second floor of this elevation features a series of one-over-one windows. One of these windows is in-filled with glass block. This building does not feature sufficient integrity or distinguishing features to qualify as eligible for individual listing on the National Register.</p>

<p>Prepared By: C. Tolmie, M. C. Bird, J. Guarino</p> <p>Photo By: S. Katz</p> <p>Date: 13 September 2012</p>	<p>Property Description:</p> <p>This Art Deco style one-story church at the southwest corner of Halsted and 120th streets in the West Pullman community has a flat roof and parapet. Its front elevation is clad in smooth limestone and has a centrally located recessed entrance with glass double-doors, a transom, and fluted side walls. The entrance is flanked by two large glass block windows. Detailing includes two flattened stone reliefs featuring eagle motifs, dentils, and banding at the parapet level. A mid-century modern, one-story, flat-roofed wing clad in faux stone and buff brick is situated along the south side of the original building (bottom of photo). It features three large picture windows along its front elevation and wide roof overhangs.</p> <p>This is a nice example of a stripped down Art Deco façade and a mid-century modern wing. However, the alternation of the two large window openings with glass block infill compromises the integrity of this small building, which no longer serves its original use. As a result, this building does not qualify as eligible for individual listing on the National Register.</p> <p>Stories: 1</p>

<p>Property Description:</p> <p>This one-story commercial building in the West Pullman community is clad with orange-brown face brick on its 120th Street elevation and synthetic siding on its Halsted elevation. The building has a flat roof and a crenellated parapet with concrete coping. The parapet is obscured by a continuous metal sign plate. The recessed corner entrance has a non-original plate glass door with an in-filled transom. The Halsted Street elevation has been altered with installation of a series of fixed-pane windows and an off-center glass door. However, this elevation retains four original brick piers with stone coping and geometric motifs as well as a portion of original brick cladding in the center, which includes a stone lintel above the outline of a former door opening now in-filled with brick. The 120th Street elevation includes two non-original doors, three double-hung wood-sash windows, and brick corbelling at the roofline. This building lacks integrity and distinctive architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This two-story residence in the West Pullman community is situated on a raised basement and is clad with brown face brick on the front elevation and common brick on the side and rear elevations. The building has a gambrel roof covered with asphalt shingles. The front elevation has a full-width hip-roofed wood porch, one-half of which has been enclosed with synthetic siding and has a picture window. The open half of the porch has an off-center doorway that has been in-filled with brick, wood steps, and a corner tapered wood column at the corner. The entrance into the home is through the enclosed porch. The second floor of the front elevation has a bay with a picture window flanked by one-over-one aluminum-sash windows and a pair of one-over-one aluminum-sash windows. The attic level has a pair of windows. The side elevations feature one-over-one aluminum-sash windows of varying sizes and a small dormer. All windows are modern replacements. This house lacks integrity and distinctive architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description: This address consists of three commercial buildings in the West Pullman community that share common party walls. The 12212 building is a one-story, flat-roofed, concrete block building with brick laid in a running bond on its Halsted elevation; it features a pair of plate-glass double doors and the outlines of two former window openings and a door opening that have been in-filled with brick. The 12216 building is a one-story flat-roofed building with a brick front, an off-center door, a strip of three window openings (one in-filled and two fixed pane), and concrete banding above the windows and at the roofline. The 12220 building is a one-story flat-roofed building that is set back from the sidewalk; it has a south-facing front elevation with a pair of plate-glass double doors and a Mid-Century modern shed-roofed canopy supported by wood posts embedded in faux stone planters. The lower portion of 12220's east (Halsted) and south elevations are faced with wood boards that are vertically laid. These buildings lack distinctive architectural features and are not individually eligible for listing on the National Register.</p>

<p>Property Description:</p> <p>This two-story mixed-use building in the West Pullman neighborhood is clad with multi-colored face brick (laid in a pattern) on the front elevation and common brick along the side and rear elevations. The building has a flat roof and shaped parapet. The front elevation has a concrete water table with decorative glass blocks, a storefront with recessed central entrance and flanking display windows, and an off-center door that provides access to the second floor. Transoms above storefront windows and the off-center entry have been in-filled. Second floor windows include five non-original one-over-one aluminum-sash windows arranged in a pair and in a group of three. Detailing includes insert blocks, a concrete panel with shield motif, coping, brick stringcourse, brick recessed panel, and concrete sills. Additional detailing includes concrete inserts along the storefront façade. This building lacks integrity and distinctive architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This one-story, flat-roofed, commercial building in Calumet Park is clad with orange face brick along its Halsted Street elevation and with common brick along its side and rear elevations. Its front elevation has a central plate glass door flanked by strips of three single-pane windows on either side. Detailing is limited to concrete coping, sills, and inserts blocks. Brackets and shadows on the façade suggest that a sign plate has been removed. This building lacks distinctive architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This one-story bowling alley at the northeast corner of Halsted and 124th streets in the West Pullman community has a flat roof with a shallow domed area on its north side. Both street elevations are clad with alternating bands of yellow and orange colored face brick and are largely unadorned, except for the south end of the Halsted Street elevation, which is clad with a stone veneer and has glass double-doors and three double-hung windows. The stone veneer turns the corner to cover a small portion of the 124th Street elevation, which is pierced by an in-filled window opening. This building lacks distinctive architectural features and is not individually eligible for listing on the National Register.</p>

<p>Property Description:</p> <p>This Mid-Century Modern church at the northeast corner of Halsted and 125th streets in the West Pullman community was built for the parish of Saints Peter and Paul. The church is clad with orange face brick and stone veneer, has a steeply pitched front gable roof, deep roof overhangs along the front elevation, and a square hip-roof corner tower with a vertical strip of leaded glass windows. The front elevation has a central pavilion flanked by projecting full-height brick piers, three sets of original double doors divided by concrete piers and topped with a concrete spandrel with incised lettering that reads "S.S. Peter and Paul," and features an expansive area above which is glazed with leaded glass. The side elevations feature a series of narrow windows that appear to be double-hung. This building is recommended as individually eligible for National Register listing under Criterion C for architecture as an excellent and rare example of a Mid-Century Modern church in West Pullman.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Name Historic: Cedar Park Cemetery Common/Current: Cedar Park Cemetery</p>	<p>Photos with Captions: East façade of cemetery entrance showing office/gatehouse.</p> 
<p>Property address: 12540 S. Halsted Street</p>	
<p>HAARGIS Number: NA</p>	
<p>Present Owner and /or Occupant: Cedar Park Cemetery</p>	
<p>Property Use Historic: Cemetery Current: Cemetery</p>	
<p>Date of Construction: 1923 Architect's Name: Unknown Builder/Contractor: Unknown</p>	
<p>Architectural Style: Romanesque Revival</p>	
<p>Prepared By: M. C. Bird, J. Guarino Photo By: S. Katz Date: 28 February 2013</p>	
<p>Property Description: Cedar Park Cemetery, founded in the early twentieth century, comprises a formal landscape on 94.5 acres at 12540 S. Halsted Street. Plantings include large deciduous shade trees as well as ornamental shrubs and mowed lawn. Grave markers are mounted flush with the lawn. The landscape is not exceptional nor does it contain any distinctive design features and does not warrant listing on the National Register of Historic Places.</p> <p>Extant buildings and structures include the office/gatehouse with ornamental gate and fence, an obelisk, three mausoleums, and a cinder block building. Cedar Park Cemetery's one-story Romanesque Revival style gatehouse is located at its Halsted Street entrance. The entrance features two pairs of massive stone gateposts and metal entrance gates. Original metal fencing extends along the length of the cemetery's Halsted Street boundary, which also features several stone piers. The gatehouse, gateposts, and piers are built of grey, brown, and pink stones that are randomly laid. The building and piers have excellent integrity and were likely installed circa 1923, along with the metal entrance gates and fencing along Halsted Street, when the Cedar Park Cemetery Association purchased its original 53-acre site. The building, piers, and gates are locally eligible for National Register listing under Criterion C for architecture due to their high quality craftsmanship and unusual stonework.</p> <p>The gatehouse has a flat roof, parapet, and stone cornice. All windows have stone sills and stone lintels with a type of</p>

scallop shell motif. The Halsted Street elevation has four windows: a small stained glass window in its projecting bay, a single window with round-arched transoms on either side of the bay, and a small, round-arched window flanked by slender colonettes in the parapet gable. The Halsted elevation bay is topped with stone banding incised with the words “Cedar Park Cemetery.” The north elevation has a centrally located pair of wood French doors and six wood-sash windows: three each on either side of the entrance. The south elevation has a centrally located multi-paned wood door with sidelights flanked by slender engaged columns. The south elevation’s four windows include a single one-over-one window on one side of the door and a group of three windows—a single pane flanked by one-over-one windows—on the other. Doors on both the north and south elevations are topped by flat stone lintels and accessed via concrete steps flanked by stone piers. The rear elevation has five one-over-one windows: a single, centrally-located window with a pair of windows on either side.

The three granite-clad mausoleums (the location of one is obscured by trees) appear to date from the middle to late twentieth-century. One of them features a chapel, which hosts non-denominational funeral services. The cinder block building, accessed by a secondary entrance just north of 125th Street, is utilitarian in nature and may serve as a maintenance building and/or as a crematorium. Neither the mausoleums nor the cinder block building appear to be eligible for inclusion on the National Register of Historic Places.

<p>Property Description:</p> <p>This one-story brick-clad building in the West Pullman community, which accommodates a day care center, has a flat roof and parapet. Its front elevation features faux stone piers, three of which are projecting and rise above the roofline, dividing the front (Halsted) elevation into five bays that feature glass doors and fenestration that includes picture windows and double-hung windows of varying shapes and sizes. This building does not feature distinguishing architectural elements to qualify as eligible for individual listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

Katz</p> <p>Date: 29 October 2012</p>	<p>Property Description: This expansive two-story, flat-roofed, brick-clad building has a one-story wing to the north. The building appears to have been built as a chain store or supermarket, but now serves as a church. A flat-roofed canopy extends along the entire length of the building's front (Halsted) elevation and shelters a pair of plate glass double-doors with transom and a continuous series of nearly floor-to-ceiling window openings that are in-filled with glass blocks and separated by wood cladding that is vertically laid. The second floor of the front elevation's two-story block has a series of narrow glass block windows. The front elevation of the one-story north wing is clad with wood that is vertically laid and a pair of wood double-doors but no windows. The building's south elevation has a pair of plate-glass double-doors with transom at its eastern end and a series of glass block windows. It does not feature distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p>Stories: 2</p>

<p>Property Description:</p> <p>This two-flat, multi-family residential building in the West Pullman community is situated on a raised basement with glass block windows and is clad with face brick on the front elevation and common brick on the side and rear elevations. The building has a full-height window bay pavilion, a flat roof, and parapet. The front elevation has a partial-width porch with concrete steps and open metal posts supporting a metal shed-roof. A pair of off-center storm doors is located under the porch roof. There are seven non-original one-over-one windows: three on the first floor bay and four on the second floor, including three on its window bay. Detailing includes concrete sills, belt courses, brick cornice with corbelling, and brick dentils. This building lacks distinctive architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Prepared By: J. Martinez, M. C. Bird, J. Guarino</p> <p>Photo By: S. Katz</p> <p>Date: 30 October 2012</p>	
<p>Property Description:</p> <p>This two-story building in the West Pullman community (formerly part of Kensington) was originally called “Venetian Hall.” The performance hall was built for a cultural/recreational purpose, although it has long since been repurposed as a church. The 1938 Sanborn shows the hall with a stage, balcony, and place for storage of scenery. The street entrance was flanked by two storefronts in 1938, as it is now.</p> <p>The building is clad with face brick on its front elevation and common brick on its side and rear elevations. The building has a flat roof and a shaped parapet with concrete coping. The first floor of the front elevation has a recessed centrally located bay with three pairs of multi-light wood doors and in-filled transoms. This central bay is flanked by two original storefronts with central recessed doors and flanking display windows that are covered with wood and topped by transoms that have been in-filled with glass block. Separating the central bay from the two flanking storefronts are two doors with transoms that provide access to the second floor. The spandrel area directly above the</p>

central entrance bay has a concrete sign plate with incised lettering that reads: “Venetian Hall.” Fenestration on the second floor features six-over-one and three-over-one wood-sash windows arranged in pairs and in groups of three, topped by round-arch stone lintels with rosette motifs. The parapet features a series of Classical shields and swags.

The exterior of this building has good overall integrity, although elements of the original storefronts materials are no longer extant. However, it does not display sufficient distinguishing architectural features to qualify as individually eligible for listing on the National Register for its architecture. Instead, is recommended for individual listing under Criterion A for its original use as a social venue for area residents in the early twentieth century. Local theater houses, such as the Venetian Hall, were jewels within the local communities. It's rare to see an early twentieth century neighborhood social hall that retains its original storefronts and is set within a residential area comprised of worker's housing, rather than along a commercial thoroughfare. The opening of Illinois Terra Cotta works in the first half of the twentieth century brought Italians to Kensington; the area gradually became a center of South Side Italian-American life with the establishment of Venetian Hall and the nearby San Antonio de Padua (patron saint of Venice) Roman Catholic Church.

<p>Property Description:</p> <p>This one-story home in the Roseland community is situated on a raised brick basement and has a front gable roof covered with asphalt shingles. Its front elevation is clad with faux stone below the sill line, orange face brick above, and synthetic siding in the gable. It has a centrally-located door, concrete steps with metal railings, a single-pane window flanked by a casement, and what appears to be a pair of casement windows. Windows are partially obscured by low metal awnings. This standard 1950s era house does not display distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This one-story brick-clad Craftsman bungalow at the northeast corner of Michigan Avenue and 102nd Street in the Roseland community has a hip roof with asphalt shingles, overhanging eaves, and three hip dormers with original paired wood casement windows. The front elevation wide roof overhang shelters the full-façade porch, which has a wood deck, side-facing wood steps with straight railings, and supports comprised of three brick piers topped by squat Doric columns. The front elevation features a metal storm door flanked by a single non-original one-over-one aluminum-sash window on either side. The 102nd Street elevation has two groups of three non-original one-over-one aluminum-sash windows and a gabled porch at its eastern end. This porch has a wood deck, side-facing wood steps with straight railings, and supports comprised of two brick piers topped by squat Doric columns. This house lacks distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This two-story commercial building at the northwest corner of Michigan Avenue and 112th Street in the Roseland community is clad with brown face brick on its front elevation and common brick on its side elevations. The building has a flat roof and parapet. The front elevation features a centrally located entrance pavilion with a round-arch entrance and paired windows directly above surrounded by terra cotta with Classical motifs, including pilasters, shields, and swags. The entrance features original single-light wood double doors with round-arch transom. A pair of windows on the north end of the front elevation is also surrounded by terra cotta with Classical motifs, including scrolled brackets, shields, and swags. The first floor's original storefront configuration is visible but most storefront bays, which are separated by brick and tile pilasters, have either been retrofitted with non-original doors and windows or in-filled with brick. The southernmost entrance is flanked by multi-light, fixed-pane windows. The nineteen window openings that stretch across the second story front elevation have all been covered with plywood. Other detailing includes terra cotta belt courses. Although this building has retained some nice terra cotta detailing, it does not feature sufficient overall integrity to qualify as individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This address comprises two conjoined buildings. The building at 11200 (top photo) is a two-story brick-clad, flat-roofed commercial building at the southwest corner of Michigan Avenue and 112th Street in the Roseland community. The first floor has three non-original Michigan Avenue storefronts, including one at the corner, which has plate glass display windows and plate-glass double-doors. The middle storefront has plate glass display windows and a plate glass door. The southernmost storefront is hidden behind a roll-down corrugated metal covering. The second floor window openings on both street elevations of this building are in-filled with what appears to be wood. Detailing includes second floor pilasters, brick stringcourses, and a metal cornice.</p> <p>The building at 11206 is the adjacent two-story, brick-clad, flat-roofed Queen Anne style commercial building to the south. Its non-original storefront has a recessed plate glass door and flanking plate glass display windows. An off-center wood paneled door with a transom provides access to the second floor, which has a three-sided metal bay and a single window; all window openings on the second floor have been in-filled with wood. Detailing includes swags at</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This two-story industrial building in West Pullman has a flat roof and parapet. A one-story, flat-roofed north wing is a later addition (1962). The original building has been drastically altered with new brick cladding on the first floor and the removal of original doors and windows on the front elevation. The first floor of the front elevation currently features two small non-original windows. The original window openings on the second floor of the front elevation have been in-filled with brick. Two one-over-one windows have been installed on either side. Window openings on the side elevations have all been altered as well. The parapet retains original decorative brick corbelling along the front and side elevations. This building does not feature sufficient integrity or distinguishing architectural features to qualify as individually eligible for listing on the National Register.</p>

<p>Property Description:</p> <p>This two-story Dutch Colonial style house at the northeast corner of Normal Avenue and 105th Street in the Roseland community is situated on a raised basement and is clad with red face brick. The building has a side-gambrel roof covered with asphalt shingles, a one-story flat-roofed enclosed sun porch surrounded by four-over-one wood-sash windows along its east elevation, and exterior chimneys on both side elevations. The front (105th Street) elevation has a centrally located non-original hollow core metal paneled door, concrete steps, and metal railings. The door was once flanked by fluted pilasters with geometric capitals. The shaft of one of these pilasters has been removed as has the base of the extant pilaster. The door is topped by an unadorned frieze band and a broken pediment and is flanked by strips of three six-over-one and four-over-one wood-sash windows on either side. The shed-roofed second floor of the front elevation has three non-original one-over-one aluminum-sash windows. This house does not have sufficient distinguishing architectural features to qualify as individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This one-story bungalow in the Roseland community is situated on a raised basement with glass block windows and clad with brown brick. The building has a hip roof covered with asphalt shingles, overhanging eaves, and a hip dormer, the windows of which were obscured by foliage. The house features a recessed corner porch with a hollow core metal door, concrete steps, low brick sidewalls, and a brick corner pier. The front elevation's projecting living room bay has a series of double-hung windows, a decorative brick soldier course, stone insert blocks, and concrete sills. This house does not display distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This one-story Ranch house at the corner of Normal Avenue and 107th Street in the Roseland community is situated on a raised basement and is clad with orange face brick below the sill line and buff brick above. The building has a cross-gable roof covered with asphalt shingles; gable ends are clad in synthetic siding. A gabled rear wing contains an attached two-car garage. The front (Normal Ave.) elevation has an off-center metal storm door sheltered by a roof overhang supported by a corner open metal post, concrete steps with metal railings, two pairs of non-original one-over-one aluminum-sash windows, and a non-original picture window flanked by one-over-one aluminum-sash windows on the main block. The front elevation of the rear wing has an off-center metal storm door, a roof overhang supported by two open metal posts, and a large glass block window. The side (107th Street) elevation has corner windows that are obscured by foliage but appear to be casements. This house lacks distinctive architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This one-story Craftsman cottage in the Roseland community has a side-gable roof with overhanging eaves and decorative knee braces. The building is made of masonry units with aluminum siding in its gabled ends. Its front elevation has a recessed corner porch with overhanging gable roof with rafter tails, low walls, and squat, squared wood column supports. The building features a front door tucked into the side of the living room bay, a strip of three casements, and a picture window flanked by what appear to be casements. All windows on the front elevation feature concrete sills. Side elevation windows appear to be non-original one-over-one aluminum-sash. This house lacks distinctive architectural features and is not individually eligible for listing on the National Register.</p>

<p>Property Description:</p> <p>This two-story house at the corner of Normal Avenue and 110th Street in the Roseland community is clad with buff brick and has a hip roof covered with asphalt shingles, an exterior buff brick chimney, and a raised basement. Its front elevation features a centrally located hipped-roof entrance vestibule with a door that is surrounded by decorative stones. A vertical strip of glass blocks adjacent to the door accents the façade. Concrete steps and metal railings lead to the entrance. There are five windows—two on the first floor and three on the second. The first floor windows are non-original one-over-one aluminum-sash while the second floor windows are six-over-one. Detailing includes concrete sills and brick flat arch window lintels. This house lacks sufficient distinguishing architectural features to qualify as individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This three-flat residential building in the West Pullman community has flat roof and parapet. Its front elevation is clad with brown face brick and has a full-height three-sided window bay pavilion. The building also includes a hollow core metal door on both the garden apartment and the first floor above. A hip-roof porch with two brick piers, and a wood deck, steps, and railings shelter the entrance. Each floor of the window bay pavilion has a central, single-pane mirrored glass window flanked by one-over-one aluminum sash windows (non-original). Detailing includes concrete sill courses and belt courses, a stone cornice with brick dentil molding, and concrete coping. This building lacks integrity and distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This two-story industrial building in the Roseland community has a flat roof and parapet. It sits within an industrial complex bounded by South Perry Avenue, an alley, and the Union Pacific Railroad line. Its front elevation is clad in painted brick. It has a hollow core metal door with in-filled transom and window openings on the first and second floors that are in-filled with glass block with louvered or casement insets. Most of the face brick at the parapet level has been replaced by a stucco-like material. The uppermost portion of the stepped parapet has bricks arranged as decorative dentils. Other buildings within the paint company complex include one-story sheet metal and brick buildings. These buildings lack integrity, do not have distinguishing architectural features, and are not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Prepared By: C. Tolmie, M. C. Bird, J. Guarino</p> <p>Photo By: S. Katz</p> <p>Date: 11 September 2012</p>	<p>Property Description:</p> <p>This industrial complex of buildings in the Roseland community includes three conjoined brick buildings: a two-story gable-roofed building (A, photo above), a collapsed brick building (B, photos on page 3), and a two-story flat-roofed brick building (C, photos on page 3). Building A has first floor clad in brick with a one-story, flat-roofed, brick commercial wing in front. The upper half of this building is clad in synthetic siding covering clapboards. It is vacant, deteriorated, and many of its window openings have been covered with particle board. Windows along the south side on the first floor are sliding or double-hung. Building B has collapsed. Building C at the far north has a parapet and is clad with red face brick and common brick. The windows with arched lintels have been in-filled with wood and brick. A new door pierces the façade. This complex of building lacks integrity, does not have any distinguishing architectural features, and is not individually eligible for listing on the National Register.</p> <p>Stories: various</p>

<p>Property Description:</p> <p>This one-story house in the West Pullman community has a gable roof covered with asphalt shingles, overhanging eaves, and a flat-roofed attached one-car garage. Glass blocks with stone sills and brick planter boxes decorate the front of the garage. The front elevation of the house is clad with light orange face brick and features two picture windows, one of which is flanked by narrow one-over-one windows. A stone panel separates the two picture windows. The front gable is clad with synthetic siding in a decorative pattern. The entrance is located along the side elevation and accessed via a flight of concrete steps with metal railings. This house does not feature distinguishing architectural features and is not individually eligible for listing on the National Register.</p>

<p>Property Description:</p> <p>This two-story house in the West Pullman community is situated on a raised brick basement and is covered with synthetic siding. The building has a front gable roof covered with asphalt shingles. The second story was added in the last few years. Its front elevation has a partial-width, hip-roof wood porch with straight posts and railings, an off-center non-original hollow core metal door, and five multi-paned double-hung windows: three on the first floor and two on the second, all non-original. This house lacks integrity and distinctive architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This one-story brick-clad bungalow in the West Pullman community is situated on a raised basement with glass block windows. The building has a hip roof covered with asphalt shingles, overhanging eaves, and gable dormers along its front and rear elevations. The front elevation has a recessed corner porch with a brick pier support at the corner, concrete steps, and a metal railing. Above the basement, windows have been covered with plywood. Detailing includes soldier brick lintels, concrete sills, and concrete insert blocks used as decorative accents. This is an example of a Chicago bungalow, a building type that the City of Chicago has recognized through its Historic Chicago Bungalow Initiative. However, this house lacks distinctive architectural features and is not individually eligible for listing on the National Register.</p>

<p>Property Description:</p> <p>This Romanesque Revival style church in the Roseland community has a front elevation and two flanking towers clad with brown face brick, while the remainder of the side elevation and the rear elevation are clad with common brick. It has a gable roof covered with asphalt shingles and gable wall dormers with shaped parapets on both side elevations. The east tower has a flat roof and a shaped parapet while the west tower has a peaked roof with overhanging eaves and exposed rafters and is topped by a finial. The central bay of the front elevation has a broad, round-arched entrance with stone surround and two sets of single-light oak double-doors. The central bay also contains a strip of double-hung windows situated within a broad arch and a rose window with tracery. Fenestration on the both towers and along the side elevations comprises round-arch windows with tracery. It is unknown whether the original stained glass for all of these windows is extant inside the church. Both towers also feature paired casement windows. Window openings at the top of the west tower have been boarded-over. Detailing includes stone sills, belt courses, brick</p> <p style="text-align: right;">Stories: 2</p>

pilasters and keystones. A one-story brick-clad entrance vestibule is situated along the rear of the west elevation. Built as the First Reformed Church of Roseland, this church is recommended as individually eligible for National Register listing under Criterion A for its association with the community's once-dominant Dutch population and under Criterion C as fine example of a Romanesque Revival style church in Roseland.

<p>Property Description:</p> <p>This two-story apartment building at the northwest corner of Princeton Avenue and 111th Place in the Roseland community is situated on a raised basement with glass block windows and is clad with brown face brick on its two street elevations. The building has a flat roof and shaped parapet with concrete coping. Windows are original three-over-one wood-sash windows arranged singly, in pairs, or in groups of four. The Princeton Avenue elevation also features four leaded glass casement windows. Each street elevation has an entrance with a non-original hollow core metal door. Detailing includes concrete sills and brick soldier courses with square stone inserts blocks. This building lacks sufficient distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Architectural Style:</p> <p>Gothic Revival</p> <p>Prepared By: J. Martinez, M. C. Bird, J. Guarino</p> <p>Photo By: S. Katz</p> <p>Date: 30 October 2012</p>	
<p>Property Description:</p> <p>This 1910 Gothic Revival style church at the southwest corner of State and 112th streets in the Roseland community is situated on a raised basement with glass block windows and is clad with tan face brick on its front elevation and common brick on its side and rear elevations. The church has a gable roof covered with asphalt shingles and a parapet with concrete coping. The gable front elevation has brick corner buttresses. A pair of wood double-doors each topped by a stone tympanum is located at either end of the gable front. The doors are accessed by concrete steps with low stone sidewalls. Windows at the gable end include a central bay with three large windows separated by stone buttresses and topped by a large stained glass window with pointed arch. Single windows are also situated above both front entrances. Most of the gable fenestration appears to be stained glass. The side elevations feature through-the-cornice gabled wall dormers with brick buttresses flanked by a series of double-hung windows. Additional detailing includes stone window hoods and sills, stone door surrounds with foliate motif, stone buttresses, and a panel inscribed "Presbyterian Church of Roseland." The church is attached via a flat-roofed wing to a 1936 three-story flat-roofed school. The front (State Street) elevation of the school is clad with tan face brick and has vertical slit windows on the</p> <p style="text-align: right;">Stories: 2</p>

second and third floors and concrete spandrels. The school's first floor elevation is obscured by a brick wall. This building does not stand out as one of the best examples of a Gothic Revival church in Roseland; other churches in this style that are more distinctive in terms of their architectural features, craftsmanship and detailing are in the area. As a result, this church is not recommended as eligible for individual listing on the National Register.

<p>Property Description:</p> <p>This church at the corner of State and 116th streets is clad in buff face brick on a concrete block foundation. The building has a raised basement, gable roof covered with asphalt shingles, and a square corner tower with a hip roof. Its front (State Street) elevation has a centrally located hip-roof entrance pavilion with metal stairs on both sides and a gable wall dormer above. The pavilion features a cross of glass blocks and the flanking walls each have a single square leaded glass window. The side (116th Street) elevation features one large and two small pointed arch windows. This church lacks sufficient distinctive architectural features to qualify as individually eligible for listing on the National Register.</p>

<p>Property Description:</p> <p>This two-story light industrial building is clad with face brick and common brick along its front and side elevations, respectively, and has a flat roof and parapet. The front elevation has an off-center entrance with no door, a large window opening on the first floor that is obscured by foliage, and window openings on the second floor that have been in-filled with both wood and brick. The buff brick between the first and second floors and at the parapet level contrasts with the red brick cladding of the front elevation and may be non-original. Detailing includes dentil molding on the parapet, banding in brick, and stone sills. Side elevation windows are in-filled with glass block. This building lacks integrity and architectural distinction and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description: Stories: 1.5</p> <p>This 1.5-story house in the Roseland community is situated on a raised brick basement with glass block windows. The building has a front gable roof covered with asphalt shingles and overhanging eaves with decorative knee braces. The front elevation is covered with faux stone to the top of the first floor windows and in vertical synthetic siding above. It has a partially recessed gable-roofed corner porch with sidewalls covered with synthetic siding, two low squared wood column supports, and wood steps. A glass block window and hollow core metal door are tucked into one side of the porch. A strip of four windows on the first floor and a pair of windows in the gable are non-original one-over-one aluminum-sash. This house lacks integrity and distinctive architectural features and is not individually eligible for listing on the National Register.</p>

<p>Architectural Style:</p> <p>Vernacular</p>	
<p>Prepared By: C. Tolmie, M. C. Bird, J. Guarino</p> <p>Photo By: S. Katz</p> <p>Date: 16 September 2012</p>	<p>Property Description:</p> <p>This four-story building at the northeast corner of Wentworth Avenue and 113th Place in the Roseland community has a flat roof and parapet. Its symmetrical front (Wentworth Avenue) elevation is clad with brown face brick and has a centrally located entrance with a glass door and stone surround topped by two stone owls holding books. Windows are non-original one-over-one aluminum-sash; those directly above the entrance have stone casings. Detailing includes stone sills, coping, insert blocks, sill courses, cornice, panels, and pinnacles at the parapet level.</p> <p>This building is recommended locally significant for National Register listing under Criterion A for Education. Formerly the Roseland Community Hospital Nurses Home, it was built by the hospital as a dormitory and educational facility for its nurses. Closely affiliated with Roseland Community Hospital, which has served as an important institution in the Roseland area since its establishment in 1924, the Nurses Home is an excellent example of this building type on Chicago's South Side. The exterior of the building has very good integrity and the interior—which now functions as a homeless shelter—appears to retain classrooms and other spaces associated with its original use.</p>

<p>Property Description:</p> <p>This one-story Craftsman style bungalow in the Roseland community is situated on a raised basement, is clad with brick, and has a side-gabled roof covered with asphalt shingles and overhanging eaves. Its side-gabled elevations are clad with synthetic siding, as is the gable dormer along the front elevation. The roof extends beyond the front elevation to serve as the roof of the porch, which is supported by open metal posts and has metal railings, a wooden deck, and wooden steps. The front elevation features an off-center hollow core metal door, a leaded glass casement window, and two strips of non-original double-hung aluminum-sash windows: one on the first floor and one in the dormer. This home does not feature sufficient distinguishing features to qualify as eligible for individual listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

MEETING NOTES

RE: Section 106 Kick-off Meeting
Red Line Extension EIS

DATE: October 24, 2012

LOCATION: Conference Call/Webinar

TO: Distribution and All Attendees

ATTENDEES:

Name	Organization
Sonali Tandon	CTA
Reggie Arkell	FTA
Anne Haaker	IHPA (SHPO)
Jonathan Fine	Preservation Chicago
Terry Tatum	Chicago Historic Preservation Division
Lisa DiChiera	Landmarks Illinois
Erma Tranter	Friends of the Park
Helene Kornblatt	CWC Transit Group
John Mettille	CWC Transit Group
Rebecca Thompson	CWC Transit Group
Robert Ball	CWC Transit Group

PREPARED BY: Rebecca Thompson

ISSUE DATE: October 24, 2012

Meeting called to order at 1:00 pm CT

Objective: Red Link Extension Kickoff Meeting for Section 106 Consultation

<i>Item No.</i>	<i>Item Description</i>	<i>Responsibility</i>	<i>Due Date</i>
1	Welcome/Intro Sonali welcomed attendees and callers introduced themselves.		
2	Overview of Section 106 Process John Mettille provided an overview of the four-step Section 106 process. Reggie Arkell explained that FTA is overseeing the consultation process, working in conjunction with CTA. FTA will make determinations regarding eligibility and effects, referencing recommendations prepared by the consultant and considering input from consulting parties, including the SHPO. John discussed the roles of consulting parties and identified ground rules to ensure everyone has a fair chance to provide meaningful input.		

Item No.	Item Description	Responsibility	Due Date
3	<p>Project Info & Alternatives</p> <p>Sonali provided a brief overview of the project area, the No Build alternative, and the three Build alternatives that are being considered: UPRR rail, Halsted rail, and Bus Rapid Transit.</p> <p>John presented the Area of Potential Effects (APE), which defines the geographic boundary where the analysis of historic resources will occur. A larger scale APE map is attached to the meeting summary.</p>		
4	<p>Schedule/Next Steps</p> <p>John explained the next steps in the process. Work is underway to identify potential historic properties. We are tentatively planning to hold a meeting to discuss the eligibility of resources in December. A meeting to discuss effects will occur in early 2013.</p>		
5	<p>Question/Answer</p> <ul style="list-style-type: none"> - Jonathan: Is the purple segment on the alternatives map new or existing? It would be a new structure in the median of the expressway. - Reggie: What is the pier spacing for the Halsted Alternative? Spans between piers would typically be 60 to 100 feet, and as long as 140 feet. Span length would be based on site conditions, geometrics, and clearance requirements. - Jonathan: What advantages does the Halsted Alternative offer over the No Build Alternative? Halsted would extend the red line south to serve additional transit markets. The No Build Alternative includes improvements at the 95th Street station which are currently being planned but would not include an extension of the route or other improvements. - Jonathan: Which alternative has the least impacts on historic resources? That is part of what we will determine through this process. - Lisa: Is documentation of the previous study available online? Yes, the project website is http://www.transitchicago.com/redeis Please use following links to access specific materials: Locally Preferred Alternative Report and Scoping Report (http://www.transitchicago.com/Redeis/documents.aspx); Alternatives Analysis Materials (http://www.transitchicago.com/news_initiatives/planning/redextend.aspx) - Lisa: If we have additional information about resources, should we send it to the team? Yes, please direct it to Sonali at STandon@transitchicago.com. - Erma: Are parks covered in the 106 process too? Parks are protected under Section 4(f) regulation, which is a separate law; they will be addressed in the project EIS. The Section 106 process will deal with historic resources; if any parks in the area or park facilities are determined to be historic, they will be considered during the 106 process. If any historic resources are used by the project, they will be addressed under Section 4(f) as well. Parks that are not historic are subject to the 4(f). 		

Please notify the author of the minutes of any corrections and/or clarifications within five (5) business days.

Jean Guarino	CWC Transit Group

PREPARED BY: Rebecca Thompson

ISSUE DATE: January 31, 2013

Meeting called to order at 10:30 am CT

Objective: Red Link Extension Eligibility Meeting for Section 106 Consultation

Item No.	Item Description	Responsibility	Due Date
1	Welcome/Intro Sonali welcomed attendees. Reggie Arkell explained FTA's oversight role on the project. John Mettillle reviewed the agenda.		
2	Background & Regulations John Mettillle provided an overview of the four-step Section 106 process, which is intended to assess historic resources and their eligibility for listing on the National Register of Historic Places (NRHP). John identified ground rules to ensure everyone has a fair chance to provide meaningful input.		
3	Review of Area of Potential Effects (APE) John presented the APE, which defines the geographic boundary where the analysis of historic resources will occur. The area includes over 1,400 acres and 7,000 buildings.		
4	Methodology for Identification of Historic Properties The team developed historic contexts for each community in the APE to frame the evaluation of historic properties. The team also conducted field surveys and archival research for over 500 individual properties within the APE. The survey sample included all buildings that would be demolished by one or more alternatives and a sample of other properties; sample properties were concentrated in areas that are likely to experience greater effects. Based on this, eligibility recommendations were developed for individual properties. <ul style="list-style-type: none">- Q: Did you look at properties less than 50 years in age that could be significant to the community? A: We primarily examined properties over 50, but we did look for overall significant properties as well as potential historic districts.- Q: Are Chicago Historic Resources Survey (CHRS) red/orange properties shown? A: They are noted in the summary table in section 3 of the handout packet.- Q: What research was done on the social history of the area? For example, what about identifying community meeting places or locations significant in the lives of civil rights leaders? Of the 7,000 buildings in the APE, it is concerning that only 10 are identified as eligible.		

Item No.	Item Description	Responsibility	Due Date
	<p>A: The team developed historic contexts for each of the communities represented in the APE but these focused primarily on the built environment. Part of the intent of the consultation process is to gather your input about what additional resources are out there, particularly from organizations more familiar with the immediately vicinity and social history. If you have information about potentially significant resources, please let us know during the comment period.</p>		
5	<p>Overview of Surveyed Properties</p> <p>Nine properties were recommended eligible for NRHP listing.</p> <ul style="list-style-type: none"> - Residence at 444 W 100th Place - Former substation at 10227 S Halsted Street (gas & electric for the city) - Fire Department at 324 W 104th Street - Roseland Pumping Station (still in use) - Residence at 11310 S Emerald Avenue - Church at 10920 S Princeton Avenue (currently Mary Magdalena Missionary Baptist Church) - Fire Department at 931 W 120th Street - Church at 12433-12439 S Halsted Street - Venetian Hall at 133-139 E Kensington Avenue (currently used as church and shelter) <i>Note: the address is correct but the property lies in the West Pullman community.</i> <p>In addition, Altgeld Gardens was determined NRHP eligible in 1992 independent of the project.</p> <ul style="list-style-type: none"> - Q: How do you account for the fact that the community is under surveyed and underserved? Underrepresentation undercuts the intention of the project. <p>A: The team prepared historic contexts for each community, consistent with the state of the practice. Beyond that, we rely on your input. Once you provide your comments, the team will establish a strategy to move forward. We will respond to comments received and keep you informed.</p> <ul style="list-style-type: none"> - Q: Does the list of surveyed properties fully cover the area to be considered in the historic/social context? (DCP agreed that it does not.) <p>A: The APE covers the area that could be impacted by the project; it forms the limits for our analysis.</p> <ul style="list-style-type: none"> - Q: Is there a separate involvement process for Section 4(f)? <p>A: There is a public involvement element if these resources are affected. It isn't a committee, but there is a mechanism to gather input from agencies and others.</p> <ul style="list-style-type: none"> - Kensington Park along the UPRR corridor should be added to the table on slide 29. <i>Note: information for Fernwood Parkway was included in the table although the name was mistakenly presented as "Fernwood Park" instead. Wendell-Smith Park is presented as "Smith Playlot" in the table, consistent with the Chicago Parks Department naming convention.</i> 	CWC	3/1

Item No.	Item Description	Responsibility	Due Date
6	<p>Schedule & Next Steps</p> <p>John Mettillie reviewed the schedule and next steps.</p> <ul style="list-style-type: none"> - Q: Can you describe the effects for each eligible property? A: We will cover this in the next phase of the process, probably in Spring 2013. - Q: What is the third alternative shown? A: The Halsted Alternative was added during the scoping process to look for options to minimize the impacts on parks and other 4(f) resources. The UPRR Alternative is the locally preferred alternative; we will define a National Environmental Policy Act (NEPA) preferred alternative as part of the NEPA process. - Q: Can the UPRR alternative fall anywhere inside the APE boundary? A: No, it will follow or run adjacent to the existing UPRR alignment. The APE includes a buffer to account for visual, noise, and other indirect effects. - Q: What source did you use for the architects and construction dates? A: CHRS and the County Assessor website. - Two of the photos on slide 26 could be considered contributing within a district. There are enough "Ranchalows" that they could be considered a housing style. <p>The team will provide a full survey map and consulting party list as requested by attendees. Materials will be revised to clarify that properties referenced in Riverdale lie in the Riverdale Community in Chicago rather than Riverdale, Illinois. Please submit written comments on the eligibility materials by February 18.</p>	CWC/CTA	2/6

Following the morning presentation, a number of attendees participated in a driving tour of the project area. Please notify Sonali Tandon of the minutes of any corrections and/or clarifications within five (5) business days.

cc: Attendees

Red Line Extension (RLE) Summary of Eligibility Comments received from Consulting Parties and Responses from Project Team

The following paragraphs briefly summarize comments received from the consulting parties on the eligibility of historic resources for the RLE Project and corresponding responses from the project team. Under the Section 106 consultation process, CTA undertook an extensive data collection and analysis effort during Fall 2012 to identify historic resources located within the Area of Potential Effect (APE) for the three built alternatives that are under evaluation in the RLE Draft Environmental Impact Statement (EIS). This analysis culminated in recommendations regarding the potential eligibility of historic resources pursuant to the National Historic Preservation Act of 1966. These recommendations were presented to the ten consulting parties, including the Illinois Historic Preservation Agency (SHPO), during a meeting on January 30, 2013. Participants were asked to provide relevant information from their perspective that may supplement the National Register of Historic Places (NRHP) evaluations contained within the RLE Draft EIS. Written comments were received from the following six organizations:

- Anne Haaker, Illinois Historic Preservation Agency
- Jennifer Kenny, Ridge Historical Society
- Jonathan Fine, Preservation Chicago
- Lisa DiChiera, Landmarks Illinois
- Matt Cole, Neighborhood Housing Services of Chicago
- Terry Tatum, Chicago Historic Preservation Division, Department of Housing and Economic Development

Based on local knowledge and input from the consulting parties, additional analysis was undertaken regarding historic resources within the APE. The original recommendations presented in January will be revised as described below and presented in the RLE Draft EIS. In addition to the written comments received by CTA, comments from the January 30 meeting will also be incorporated into the Draft EIS to provide additional clarification. Comments and responses are presented by general topic below.

Comments requesting additional surveys:

Several comments requested that the team evaluate additional sites for NRHP eligibility. These additional sites and their evaluations are summarized below, including both individual properties (Comments #1-6) and potential districts (Comments #7-12).

1. American Ideal Cleaning Building at 10343 South Michigan Avenue
[This building falls beyond the APE boundaries.](#)
2. Lilydale Progressive Missionary Baptist Church at 10716 South Michigan Avenue
[This building falls beyond the APE boundaries.](#)
3. Greystone building at 11445-11447 South Michigan Avenue
[This building falls beyond the APE boundaries.](#)
4. Entrance gate and structure at Cedar Park Cemetery at 12584 South Halsted Street
[These structures were field surveyed in February 2013 and are recommended eligible for the NRHP under Criterion C for the high quality craftsmanship and unusual stonework. A site form is attached.](#)

5. Kensington Park

The Park was field surveyed and, following archival research is not recommended eligible for the NRHP. Purchased by the City in 1942, Kensington Park has been updated throughout the decades and currently contains a number of contemporary recreational amenities that give it a recent appearance: a mid-twentieth century field house that is no longer in use, playground equipment, a splash pad, a paved basketball court, a horseshoe pit, and baseball fields. Although the field house is over 50 years in age, it lacks distinguishing architectural features. As a publicly-owned park, Kensington Park will be addressed in the NEPA document as a Section 4(f) resource.

6. Two-story commercial building at 11206 South Michigan Avenue

The building was surveyed and is not recommended eligible for the NRHP due to its lack of integrity and distinguishing architectural features. The site form is included on the Eligibility CD as 11200-11206 S Michigan Avenue.

Note: A number of sources consulted during the archival research phase – including the City of Chicago GIS database, Illinois Historic Preservation Agency's HARGIS database, County Assessor Records, and others – present building addresses inconsistently. Street numbers may differ by several addresses: the church at 12433-12439 South Halsted Street is called 12427 South Halsted Street by a different agency, though both refer to the same building. To aid comparisons, the summary table notes alternate addresses for several properties when these inconsistencies were identified during the eligibility assessments.

7. Potential historic district/grouping of cast stone-faced residences on South Eggleston Avenue between 111th & 112th Streets

Numerous buildings in this location were surveyed as part of the representative sample set, including one cast stone-faced residence on South Eggleston Avenue (11130 South Eggleston Avenue). Individually, this building was not recommended eligible for the NRHP due to its lack of integrity and distinguishing architectural features. Along South Eggleston Avenue near West 111th Street and West 112th Street, there appear to be only two cast stone-faced residences within the APE, which is not sufficient for these properties to be considered as a potential historic district or multiple property grouping.

8. Could groupings of ranchelows contribute to a future NRHP district (between 103rd St, 104th Pl, UPRR, and Princeton Ave)?

A number of raised ranches were surveyed as part of the representative sample set; none were found to merit individual listing for the NRHP. Although the area (between 103rd St, 104th Pl, UPRR line, and Princeton Ave) contains numerous residences with similar architectural styles, massing, setbacks, and construction dates, architectural historians confirmed that these properties do not retain sufficient integrity for the NRHP as a district due to contemporary - alterations (e.g., replacement siding, porches, windows, and doors). Numerous vacant lots and recent construction, such as the post-1980 Langston Hughes Elementary School that encompasses an entire city block, disrupts the visual cohesiveness of this area.

9. Potential district of Residential Railroad Suburbs or Historic Streetcar Communities, e.g. along the Chicago & Eastern Illinois RR; the Chicago & Great Eastern RR; the Illinois Central RR 121st Street spur; or streetcars along Michigan Ave, 103rd St, 111th St, 115th St, and 119th St.

After additional fieldwork, no cohesive groupings of historic commercial buildings or community centers were identified along the primary thoroughfares that supported streetcar lines, railroad

lines, or spurs. Therefore, the suggested areas are not recommended as a district or multiple property group.

10. Potential district/group of properties associated with the former Village of Fernwood, generally located between 90th St, 103rd St, Stewart Ave, and Morgan/Halsted Street
As part of the original fieldwork effort, a handful of these resources were surveyed within the APE. As noted in the letter, many have integrity issues. Many of Fernwood's signature buildings are located outside the APE or have been demolished. Further, the amount of contemporary infill has compromised the historic setting of the residential suburb. Therefore, this area is not recommended as a district or multiple property group.
11. Potential district/group of historic automobile-related buildings along major thoroughfares (e.g. Halsted and Michigan Ave)
Although a number of auto-related resources were surveyed within the APE, none exhibited sufficient historic integrity to qualify as eligible for the NRHP either individually or as a contributing resource within a multiple property group. All of the surveyed automotive service buildings exhibit contemporary alterations.
12. Chicago Georgian and Raised Ranch Historic Districts
The Ridge Historical Society and other consulting parties suggested these styles be considered as part of the eligibility discussions for the Section 106 process. Review by architectural historians confirmed that a cluster of these properties exists along an approximately five block area on the east side of Green Street between 104th Street and 109th Street. The streetscape has a cohesive grouping of vernacular homes that is representative of residences that were constructed in the outlying areas of Chicago during the post-World War II era. Although such neighborhoods are common throughout the city, these five blocks include hipped-roof ranch homes, front-gabled cottages, and Chicago Georgian style homes with little to no contemporary infill. The residences date from the 1950s and 1960s with consistent setbacks and similar brick cladding; they appear to be well-maintained. Therefore, the portion of Green Street between 104th Street and 109th Street is recommended as eligible for the NRHP as a historic district for architecture (Criterion C).

Comments requesting reconsideration of surveyed properties:

Several comments requested that the team reconsider properties that were surveyed but recommended not eligible for NRHP listing at the January meeting. These additional properties and their evaluations are summarized below.

13. Sure-Way M.B. Church at the southwest corner of Halsted Street and 120th Street
The building is not recommended eligible for the NRHP due to lack of integrity and because it no longer serves its original use. The site form is included on the Eligibility CD as 12000 S Halsted Street.
14. Fernwood Parkway
Fernwood Parkway was evaluated against NRHP criteria and is recommended not eligible for NRHP listing. However, as a publicly-owned park, it will be addressed in the NEPA document as a Section 4(f) resource.
15. Roseland Auto Sales & Service at 11200 South Halsted Street
The building is not recommended eligible for the NRHP due to its lack of integrity. The setting is compromised by contemporary infill and the exterior has been clad in modern materials. The site form is included on the Eligibility CD as 11200 S Halsted Street.

16. Bethany Reformed Church Manse at Three West 111th Place
The building was not originally recommended eligible due to its lack of distinguishing architectural features. However, as a result of additional information provided by Ridge Historical Society, the resource is recommended eligible for the NRHP under Criterion B due to its association with Reverend Harry J. Hager (1899-1983), a pioneer in media evangelism in Chicago during the mid-twentieth century. A revised site form is attached.
17. Pridjian & Co Building at 11600 South Halsted Street
The building is not recommended eligible due to its lack of distinguishing architectural features. While the Pridjian & Company business has been in operation for decades, the property does not reach the level of significance required by the NRHP. The site form is included on the Eligibility CD as 11600 S Halsted Street.
18. Roseland Community Hospital Nurse's Home at 11321 South Wentworth Avenue
The building was surveyed and was not originally recommended eligible due to its lack of distinguishing architectural features. However, as a result of additional information provided by Ridge Historical Society during the eligibility discussions for the Section 106 process, the resource could be considered locally significant under Criterion A for Education based on its use as a dormitory for its nurses and as an important nurse training facility. A revised site form is attached.
19. Galloy & Van Etten Cut Stone Contractors Building at 11756 South Halsted Street
The building was not originally recommended eligible under Criterion C due to its lack of integrity and distinguishing architectural features. However, as a result of additional information provided by Ridge Historical Society during the eligibility discussions for the Section 106 process, the resource could be considered locally significant under Criterion A for its longstanding association with the local construction industry as a 113-year old stone contracting company. A revised site form is attached.
20. Would the substation at 10227 South Halsted Street be eligible under Criterion A as well?
Yes: the substation is recommended eligible under Criterion A for its association with utilities infrastructure within the city of Chicago. At the January 2013 meeting, it was recommended as NRHP eligible under Criterion C. A revised site form is attached indicating this building as eligible both under Criterion A and Criterion C.
21. Although noted architect Murray Hetherington designed the house at 11001 S Green Street, the resource was only evaluated based on its integrity.
Numerous residences designed by Hetherington that exhibit greater integrity exist today, including 2078 West Hopkins Place, 8918 South Hamilton Avenue, and 8929 South Hamilton Avenue. Due to the compromised integrity of the Green Street property, it is not recommended as NRHP eligible. The site form is included on the Eligibility CD as 11001 S Green St.

Comments regarding assessment of effects:

The following comments expressed concern about the assessment of effects, which will be covered in the next phase of the consultation process. Noted below, these will be considered in the next phase of the analysis.

22. We object to historic properties being purchased and demolished for construction staging.
23. The proposed BRT route would affect the fewest cultural resources. The UPRR route will affect fewer resources than the proposed Halsted line.

24. Building an elevated rail line down Halsted Street would have negative consequences for the tranquil and bucolic atmosphere of the Cedar Park Cemetery.

Comments requesting minor amendments to the summary table and/or site forms:

The following comments identified minor amendments to the summary table and/or site forms for individual properties. None of these modifications change the NRHP eligibility recommendations. Noted below, these edits will be incorporated; revised materials will be provided along with the effects materials prior to the next phase of the consultation process.

25. The Fire Department Engine Co. 93 building at 324 West 104th Street (alternate address: 328-330 W. 104th St.) is CHRS Orange
26. The Roseland Pumping Station at 351 West 104th Street is CHRS Orange
27. The French Eclectic style house at 11310 South Emerald Avenue was listed as a “local landmark” but is not designated; it is CHRS Orange.
28. The Romanesque Revival style Church at 10920 South Princeton Street is CHRS Orange
29. The two-story commercial building at 11206 South Michigan Avenue is CHRS Orange
30. The architectural firm of Fox & Fox designed the church at 12433-1439 South Halsted Street, which was built in 1958-1959.
31. The Venetian Hall at 133-139 East Kensington Avenue was built in 1925-1926 and designed by Arthur F Hughes.
32. The house at 11310 South Emerald Avenue was built 1927-1928 for Stuart Colman. Inventory form should specify this resource is individually eligible.
33. Property listed as 748 East 103rd Street should be 748 West 103rd Street.
34. The substation at 10227 South Halsted Street was built in 1919-1920.

Other Comments:

Additional comments received are discussed below.

35. There should be a separate category in the spreadsheet for Chicago properties rated as “orange” on the Chicago Historic Resources Survey (CHRS).
CHRS Orange properties were noted in the summary table provided to consulting parties on January 5, 2013. These properties will be discussed separately within the project’s Environmental Impact Statement.
36. We [SHPO] generally concur with the findings of the architectural surveys. It is expected that additional resources suggested will be considered once the final route is selected.
Comment noted.
37. While we agree that the house at 444 West 100th Place is NRHP eligible, we disagree about the Neo-Traditional style description and are concerned that the replacement of the original tile roof jeopardizes integrity.
Based on the ornamentation (Neo-Gothic castellated porch roof, Classical colonettes, and arched lintels), the house was identified as an early example of the Neo-Traditional style. It is recommended as NRHP eligible and will be assessed for effects in the next phase of the consultation process.
38. Use of catch-all architectural style descriptors was inconsistent and difficult to sort/review.
Many of the residential resources are stripped-down brick and frame bungalows and cottages representing the predominant building stock for the study area. Likewise, commercial resources

contain little ornamentation or detailing. The broad term “vernacular” was used whenever a resource did not exhibit a particular architectural style. This approach is consistent with the current state-of-the-practice.

39. Historic functions should match NRHP categories.

While official NRHP functions were not used on the survey forms, easily identifiable equivalent terms were used to improve comprehension for a broader audience. This approach is consistent with the current state-of-the-practice.

40. Construction dates listed in the Cook County Assessor Records are less reliable than dates listed in building permit records.

Numerous varied sources were used to establish and cross-check construction dates: County Assessor records, GIS database layers provided by the City of Chicago, the HARGIS database maintained by the Illinois Historic Preservation Agency, Sanborn mapping, etc. This approach is consistent with the current state-of-the-practice.

41. The church at 10920 South Princeton Avenue is currently called Mary Magdalene Missionary Baptist Church.

The church at 10920 South Princeton Avenue was identified by both its historic name (First Christian Reform Church of Roseland) and its current name (Mary Magdalene Missionary Baptist Church) on the inventory form. The property is eligible for the NRHP due in part to its association with early Dutch settlement in the area, so the historic name was referenced in the presentation.

Red Line Extension

February 4, 2013

Sonali Tandon
Chicago Transit Authority
567 W. Lake St.
Chicago, IL 60661-1498

Dear Ms. Tandon:

Thank you for requesting comments from our office concerning the possible effects of the referenced project on cultural resources. Our comments are required by Section 106 of the National Historic Preservation Act of 1966, as amended, and its implementing regulations, 36 CFR 800: "Protection of Historic Properties".

We appreciated information provided during the meeting at the CTA on January 30, 2013, and the tour that augmented the architectural surveys and introduced the three routes proposed by the CTA. In general we concur with the findings of the architectural surveys submitted to this office prior to the meeting and tour, but during the tour it was noted that resources identified on the Chicago Historic Resources Survey were not identified and that structures such as those located within Cedar Park Cemetery were excluded from the sample. It is likely that our preservation partners present at the meeting will have additional resources that they would like to see included in the survey. It is expected that these additional resources will be considered once a final route has been selected.

In our opinion, the proposed expansion of the BRT route will affect the least amount of cultural resources located within its APE. We also believe the UPRR route that is often adjacent to existing railroad tracks will affect fewer resources than the line proposed on Halsted Street.

We look forward to reviewing the final historic resources report once the comments of our preservation partners have been considered.

If you have questions please contact David J. Halpin, Cultural Resources Manager, at 217-785-4998.

Sincerely,

Anne E. Haaker
Deputy State Historic
Preservation Officer

Subject: Red Line Extension Section 106 - comments on historic resource identification

Dear Ms. Tandon:

Thank you for the opportunity to comment on historic resource identification efforts for the Red Line Extension Project as part of the ongoing Section 106 consultation process for this project. Our office appreciates the scale and importance of this undertaking, and we commend the CTA's efforts to incorporate historic preservation issues and concerns into its larger planning efforts. We hope to work with you to minimize the effect of the Red Line Extension Project on historic properties.

As part of the Section 106 process, we wish to bring to your attention both general observations on this historic resource identification effort, as well as comments on specific properties that may be impacted by the project.

Chicago Historic Resources Survey red- and orange-rated properties

With the help of your consultant team, you have preliminarily identified properties that are eligible for NR listing. These properties have been listed in the "RLE Draft Eligibility Findings for Surveyed Properties" spreadsheet.

Our office believes that there should be a separate category in the spreadsheet for Chicago properties rated as "orange" on the Chicago Historic Resources Survey. (There are no CHRS "red-rated" buildings in the Red Line Extension's APEs.) Conducted between 1983 and 1995, this city-wide survey identified properties constructed prior to 1940 that were perceived to have, within at least the context of their neighborhoods, some historic significance to these neighborhoods. These buildings were either color-coded red or orange, depending upon the level of their historical and architectural significance as known at the time of the survey.

Although not designated Chicago Landmarks, these CHRS "red" and "orange"-rated properties are covered by the City's Demolition-Delay Ordinance, enacted by City Council in 2003, which allows for an up-to-90-day hold on building permit applications for demolition by the Department of Housing and Economic Development (DHED) for these properties. (More information on this ordinance can be found at http://www.cityofchicago.org/city/en/depts/dcd/supp_info/demolition_delay.html.) Even where such properties have also been determined eligible for National Register listing, we believe that it is prudent of the CTA to separately identify all CHRS orange-rated properties within the APEs on the historic resources spreadsheet. The effect of the Red Line Extension Project on these "orange" properties can then be determined and, if necessary, mitigated through direct discussions with DHED as early in the project as possible.

Observations concerning individual properties located in the APEs

1. Several buildings identified as "orange-rated" in the Chicago Historic Resources Survey (CHRS) were sampled by the CTA's historic resources consultants.

The **Classical Revival substation** at 10227 S. Halsted St. (Map 7) was determined eligible for National Register listing. It is a CHRS “orange-rated” building and was noted as such on the spreadsheet.

The **Fire Department Engine Co. 93 building** at 324 W. 104th St. (alternate: 328-330 W. 104th St.) (Map 30) was preliminarily determined eligible for National Register listing. It is a CHRS “orange-rated” building, but was not noted as such on the spreadsheet. It should be so noted.

The **Roseland Pumping Station** at 351 W. 104th St. (Map 30) was preliminarily determined eligible for National Register listing. It is a CHRS “orange-rated” building, but was not noted as such on the spreadsheet. It should be so noted.

The **French Eclectic style house** at 11310 S. Emerald Ave. (Map 12) was listed as a “local landmark” and preliminarily determined eligible of NR listing. However, it is not a designated Chicago Landmark. Instead, it is an “orange-rated” building in the CHRS, but was not noted as such on the spreadsheet. It should be so noted.

The **Romanesque Revival style Church** at 10920 S. Princeton St. (Map 34) was preliminarily determined eligible for National Register listing. It is a CHRS “orange-rated” building, but was not noted as such on the spreadsheet. It should be so noted.

2. In addition, one building identified as “orange-rated” on the CHRS and located within the APE for the BRT option was not identified and sampled. The **two-story commercial building** at 11206 S. Michigan Ave. (listed as 11208 S. Michigan on Map 45) was not sampled by the historic resource survey. It is an “orange-rated” building in the CHRS (CHRS data form and Google Earth photo attached) and should be noted as such on the spreadsheet. It should also be separately evaluated for National Register eligibility.

I would be pleased to assist the CTA’s consultant team as they gather additional information on historic resources within the APEs for this project.

Sincerely,

Terry

RE: Red Line Extension— NR eligible properties in APE

Dear Ms. Tandon,

As requested, we have reviewed the APE boundaries and the properties identified within the APE that are listed in or “eligible” for listing in the National Register of Historic Places by the Red Line Extension project team.

We are very pleased to see the numerous properties identified and acknowledged as historic. However we have the following observations:

- We recommend including all properties that are orange-rated in the Chicago Historic Resources Survey (CHRS) in a separate category due to the fact that they will require an additional mitigation process through the city’s demolition delay ordinance.
- During the driving tour of the preferred Red Line Extension routes, I took note of the following properties that were not included in the project team’s list of eligible properties that looked as if they could be of possible architectural significance.
 - The American Ideal Cleaning Building at 10343 S. Michigan – a mid-century commercial building
 - The Lilydale Progressive M.B. Church at 10716 S. Michigan
 - City Sports store commercial block at 11102 S. Michigan
 - 11445-47 S. Michigan – Commercial/residential side by side Greystone – rated orange in CHRS
 - 11451 S. Michigan – one story commercial Art Deco building – rated orange in CHRS
 - Sure-Way Missionary Baptist Church at S.W. corner of Halsted and 120th. Art Deco corner building with a mid-century addition on the south side
 - Entrance gates and structure to Cedar Park Cemetery, 12584 S. Halsted
- Based on precedent with the Brown Line renovation project, we object to historic properties being purchased and demolished to make way for construction staging. We hope the team will specifically identify historic properties in the areas where construction staging may be planned to help identify alternative locations.

Thank you for the opportunity to review the findings by your team for this project. Please let me know if we can be of further assistance before the next consultation.

Sincerely,

Lisa DiChiera

RE: Red Line Extension – National Register eligible properties in APE

Dear Ms. Tandon,

As a housing and community development organization with longstanding ties to the greater Roseland area, we appreciate CTA inviting Neighborhood Housing Services of Chicago, Inc. (NHS) to participate in the Section 106 review for the proposed Red Line Extension routes. NHS believes the Red Line Extension project will ultimately enhance the livability and well-being of Roseland and surrounding neighborhoods by increasing transit access for residents. At the same time, we wish to ensure that the project minimizes any undue impacts on the existing residential, community, and historic buildings that make these neighborhoods great and that our experience has shown can be important community-building and engagement assets. Therefore, NHS would like to submit the following comments regarding the National Register eligible properties surveyed by the Red Line Extension project team in the APE:

- We recommend re-evaluating the exclusion of raised ranches – colloquially referred to “ranchelows” for looking like a cross between a Chicago bungalow and a ranch-style home – from the survey. While currently not a formally recognized form of Chicago vernacular architecture, these homes define the look and character of large stretches of the APE adjacent to UPRR right-of-way. We would encourage the CTA project team to determine if groupings of “ranchelows” in the APE could contribute to a future National Register district.
- During the van tour of the preferred Red Line Extension routes on January 30th, we also took note of the following areas that warrant additional surveying/review by the project team:
 - 111th & 112th South Eggleston: A few cast stone-faced residences were observed on or adjacent to these blocks, including one home immediately adjacent to the UPRR right-of-way. These buildings, which look similar to Chicago greystones, are relatively rare and should be evaluated for National Register eligibility.
 - 103rd Street to 104th Place between the UPRR and Princeton Avenue: This area includes the previously identified, National Register-eligible Roseland Pumping Station and Roseland Fire Station properties. However, the blocks also include a largely intact and well-maintained grouping of Chicago bungalows and frame

cottages. We would encourage the project team to conduct a more detailed survey of these blocks to determine if these residential properties could contribute to a future National Register district.

- Though not directly applicable to the survey of National Register-eligible properties, we encourage the project team to carefully evaluate the potential impact of the Red Line Extension on the Fernwood Parkway that runs immediately west of the existing UPRR right-of-way. Albeit simply landscaped, the parkway provides a nice amenity to homes along Eggleston Avenue between 99th and 104th Streets.

In addition to these observations, we fully concur with the recommendations from Lisa DiChiera, Director of Advocacy, at Landmarks Illinois regarding specifically calling out "orange-rated" properties listed on the Chicago Historic Resources Survey; the additional commercial, religious, and community buildings that should be evaluated on Michigan Avenue and Halsted Street; and avoiding the demolition of any historic properties to make way for construction staging.

Thank you again for inviting NHS to participate in the Section 106 review for the Red Line Extension project. Please let us know if we can be of further assistance before the next scheduled consultation.

Best,

Matt Cole

Re: Red Line Extension – Possible negative effects to historic properties with in the proposed APE

Dear Ms. Tandon,

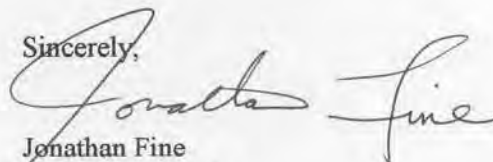

Thank you for facilitating the recent driving tour of the three proposed routes for the Red Line extension. I am writing in response to concerns our organization has regarding possible destruction of historic buildings or landscapes with the APE.

I have had a chance to review the comments being submitted by Landmarks Illinois and we agree with and support all of their concerns.

In addition, we are concerned about the negative consequences that building an elevated rail line down the middle of South Halsted Street would have on the tranquil and bucolic atmosphere of Cedar Park Cemetery.

Thank you for your consideration. We look forward to continuing our partnership on this exciting project.

Sincerely,

Jonathan Fine

www.ridgehistoricalsociety.org

February 20, 2013

Sonali Tandon
Chicago Transit Authority
567 West Lake Street, 10th Floor
Chicago, IL 60661

Dear Sonali,

Thanks for the opportunity to be a consulting party to the CTA's Red Line Extension (RLE) Section 106 eligibility process.

The Ridge Historical Society (RHS) serves the Beverly, Morgan Park and Washington Heights community areas on Chicago's south side. For this reason, we are particularly interested in the RLE impact upon historic properties in the APE situated within the Morgan Park and Washington Heights community areas. Both the Halsted Street and Union Pacific Railroad APE are located at the easternmost boundary of our service area. Please note that we do maintain an archival collection that reaches beyond our service area since our history does overlap with nearby areas, including West Pullman and Roseland. We reserve the right to comment on historic resources in other community areas just outside of our service area.

I have reviewed the materials and inventory forms submitted by the consulting team and offer the following comments.

IDENTIFIED NR ELIGIBLE PROPERTIES

The Ridge Historical Society agrees with the National Register (NR) eligibility of the two properties identified by the study in the Washington Heights community areas (our service area) – 10227 S. Halsted Street and 444 West 100th Place. Unfortunately, the team did not identify any NR eligible properties in the Morgan Park community area.

1. We agree that the City of Chicago Department of Gas and Electricity, Southwest Substation, at **10227 South Halsted Street** is NR eligible under C for its architecture, as a rare remaining example of a city government public works building. As stated on the study's inventory form, it is an orange rated building in the Chicago Historic Resource Survey (CHRS). The CHRS did supply a date of construction, 1919-20, that does not appear on the inventory form. I am wondering if this public works building is also NR eligible under A.
2. We agree that the single family dwelling at **444 West 100th Place**, built 1931, is potentially NR eligible under C for its architecture, as a rare brick Bungalow in

Washington Heights with striking Tudor Revival and Mediterranean Revival detailing. The Bungalow sports a handsome crenellated entry, decorative arches, and colonettes. I would not call this building Neo-Traditional, which is an architectural style reserved for late 20th-century buildings. I am concerned that this home once had a clay tile roof, perhaps jeopardizing its integrity. A similar house, designed by architect John Hoche, can be found in Beverly at 1762 W. 94th Street.

Additionally, I am providing architectural and historic info on other properties in the APE flagged as NR eligible by the team:

- The architectural firm of Fox and Fox designed S. S. Peter and Paul Church, **12433-12439 S. Halsted Street**, 1958-59. Architect John J. Fox, Jr. was a longtime resident of Beverly-Morgan Park and a noted local Roman Catholic church designer. He died in 2003.
- Venetian Hall, **133-139 E. Kensington Avenue**, was built in 1925-26 and designed by architect Arthur F. Hughes. Hughes is a local architect who designed a number of striking historic revival style homes in Beverly-Morgan Park.
- **11310 South Emerald Avenue** was built in 1927-28 for owner Stuart Colman. Note: the Individually Eligible category on page 2 of the inventory form says No when it should say Yes.

ADDITIONAL INDIVIDUAL PROPERTIES THAT MAY BE POTENTIALLY ELIGIBLE FOR THE NATIONAL REGISTER OF HISTORIC PLACES

The Ridge Historical Society would like the team to consider the following buildings for NR eligibility:

Roseland Auto Sales and Service Building (Allinone Auto Sales Building) 11200 South Halsted Street (Morgan Park)

Built 1927 for Henry T. Vollmer

Doerr, Lindquist and Doerr, architects

Potentially eligible under Criterion C for architecture as a rare remaining example of a garage and auto sales building from the early 20th-century in Morgan Park. Both Beverly-Morgan Park and Roseland were once major centers of auto sales on Chicago's south side, with dealerships along major area thoroughfares. Building is best known historically as a satellite salesroom for Roseland Auto Sales, featuring Studebakers. Additionally, Midland Terra Cotta Company provided the handsome terra cotta ornament for the one-story brick store building. Its integrity was likely questioned by its wood paneled storefront, but the original storefront may be behind the vertical boards. If not individually eligible, perhaps eligible as part of a multiple property listing (see below).

Bethany Reformed Church Manse

3 West 111th Place

Craftsman-style single family residence

Built 1923-24

Purchased by church and addition built in 1928

Potentially eligible under criterion B for its historic associations with Reverend Harry J. Hager, pastor of Bethany Reformed Church from 1929-1975. Hager was a pioneer in media evangelism in Chicago during the mid 20th-century through his Sunday radio ministry broadcasts on local stations WHIP and WCFL. This church-related residence in the Craftsman style retains a high degree of architectural integrity, including a Gothic Revival style entry porch that likely dates to Hager's residency.

K. A. Pridjian and Company Building

11600 South Halsted Street

Built 1960

Potentially eligible under Criterion A for its historic associations with longtime local business, K. A. Pridjian and Company, Rug Cleaning and Sales. Established in 1924 in Roseland, Pridjian first operated at 54 West 111th Street. Owner K. A. Pridjian (d. May 6, 1965) had the facility built specially for his rug operation. Building retains much of its integrity in its mid-century storefront design, materials, and signage. (side note: Almost everyone in Beverly-Morgan Park has their rugs cleaned by Pridjian!)

Roseland Community Hospital Nurses Home

11321 South Wentworth Avenue

Built 1923-24

E. Hall, architect.

Potentially eligible under Criterion C for its architecture as a rare remaining example of a unique education-related building type in Chicago, a hospital-affiliated nurses' home. The three-story brick, Roseland Community Hospital Nurses' Home provided housing and educational opportunities for women training in the nursing profession. The interior may still reflect dormitory rooms, classrooms, and other spaces essential for nurses' training during the early 20th-century. Not sure how many of these building types are left in Chicago, but might be one of the only on the south side.

Galloy and Van Etten Cut Stone Contractors Building

11756 South Halsted Street

Built over time – 1921, 1928, 1946 and 1950

Potentially eligible under Criteria C for its associations with the Van Etten family, prominent local builders on Chicago's south side. Galloy and Van Etten, a longtime cut stone contracting business near the Panhandle railroad tracks, has operated continuously at this site from at least 1909. The cut stone exterior of the buildings within the complex reflects its occupant's trade. Founder Abe Van Etten was the brother of Simon and Henry Van Etten, whose contracting firm known as Van Etten Brothers built monumental residences and religious buildings on the south side. Galloy and Van Etten likely provided the cut stone used in many of these buildings.

NR ELIGIBLE CONTIGUOUS HISTORIC DISTRICTS OR MULTIPLE PROPERTIES

The Ridge Historical Society urges the team to revisit any groupings of historic properties that may be potentially NR eligible as contiguous districts or as multiple property listings. The APE is located in a section on Chicago's south side that has been under surveyed in the past, and as a result, little data is available and very few historic resources have been proactively designated as local landmarks or listed in the National Register of Historic Places. Perhaps our community areas need a different approach in this type of study, especially when conducting cultural resource surveys. For example, surveyors could relax harsh integrity standards or look at broader patterns that might lead to multiple property nominations.

Here are some suggestions:

1. Would any of the Historic Residential Railroad Suburbs or Historic Streetcar Communities in the APE be NR eligible as multiple property listings? Since suburban development was extensive outside of nineteenth-century Chicago, perhaps the team could take a second look at the communities that were stimulated and developed along the area's railroads and streetcars in 19th-century Calumet Township and Chicago's early 20th-century neighborhoods. Especially important are those along the Chicago and Eastern Illinois, which came through in 1880-81 (UPRR APE); the Chicago and Great Eastern Railroad, an early subsidiary of the Pittsburgh, Cleveland, Chicago and St. Louis Railway who constructed tracks in 1865 (Halsted APE); and the Illinois Central Railroad who operated an east-west spur at 121st Street. Streetcars were operating along Michigan Avenue, 103rd Street, 111th Street, 115th Street and 119th Street, and stimulating residential and commercial development.

Properties Associated with the former suburban Village of Fernwood. Fernwood is now part of the Washington Heights community area and within the RHS service area.

Fernwood, a station stop on the Chicago and Eastern Indiana Railroad was first incorporated as a village in 1886 and annexed to the City of Chicago in Spring of 1891. Focused on a station at the 103rd Street crossing (then Tracy Avenue), Fernwood was mostly a residential district, with a few locally serving commercial buildings. Its boundaries ran from 90th Street on the north, 103rd Street on the south, Stewart Avenue on the East, and Morgan

and Halsted on the west. Developers E. L. Gillette and Henry L. Hill, along with S. Montgomery Smith, laid out Fernwood in 1883 for residential development with an adjacent public park, approximately 75 feet wide along the tracks from 99th Street to 103rd Street. This park, now known as Fernwood Parkway, played a significant role in the development of this railroad suburb. This landscape feature marks the importance of open space, trees, and grassy public space to a growing residential suburb. Within the APE, a number of frame homes on suburban size lots remain, particularly along Eggleston Avenue, representing this period of development. Yet, these residences may have integrity issues (see 10100 South Eggleston Avenue), and many of Fernwood's signature buildings are either outside of the APE (including churches and a public school) or have been demolished (such as the Fernwood Station and Gillette Hall).

2. **Historic automobile-related buildings along major thoroughfares, including service stations, garages and car sales dealerships.** In reviewing the inventory forms in the APE, the team recorded a large number of auto-related buildings, although not contiguous. Halsted Street and Michigan Avenue were both major thoroughfares for the area, and as stated above, both Beverly-Morgan Park and Roseland were once major centers of auto sales on Chicago's south side. Could these buildings be NR eligible as a multiple property nomination?
3. **Chicago Georgian and Raised Ranch Historic Districts.** Just like the Chicago Bungalow Multiple Property Listing and subsequent NR districts, perhaps a multiple property listing is imminent for neighborhoods of Chicago Georgians and Raised Ranches. Both are mid 20th-century vernacular types which evolved from the earlier designs and plans of the American Foursquare and Bungalow respectively. Rows of raised ranches (also known as Bungalow Ranches) are found in the Halsted APE.

GENERAL COMMENTS AND CORRECTIONS:

1. Usage of catch-all architectural styles and types. Most every building I reviewed was labeled vernacular. Architectural styles, when used, were inconsistent. Using catch all categories makes it quite difficult to sort, review and compare important architectural specimens. Upon request, I can provide corrections to architectural styles and types in the Washington Heights and Morgan Park community areas.
2. Historic and current functions and uses should match National Register categories.
3. Construction dates for historic buildings in the APE came from an unreliable source—Cook County Assessor lists. A better primary source, such as City of Chicago building permit records, should be used for those properties determined NR eligible. It is disappointing that the team did not conduct basic research on the very small number of buildings (9) determined eligible in the study under NR Criterion C for architecture. Construction dates, owners, architects and builders would surely add to the historic context and story.

4. 748 E. 103rd Street (Washington Heights) should be **748 W. 103rd Street**.
5. Noted Beverly-Morgan Park architect Murray Hetherington designed the Tudor Revival-style residence at **11001 South Green Street** (Morgan Park), built 1940-41. Although a handsome, small scale Tudor Revival house, strict integrity standards were applied by the team.

Please contact me with further questions.

Sincerely,

Jennifer R. Kenny
Architectural Historian, Ridge Historical Society

PREPARED BY: Rebecca Thompson

ISSUE DATE: June 6, 2014

Meeting called to order at 10:00 am CT

Objective: Red Line Extension Effects Meeting for Section 106 Consultation

Item No.	Item Description
1	<p>Welcome/Intro</p> <p>Mike Connelly welcomed attendees. JM reviewed the agenda and informed attendees that a public Open House is scheduled for May 13.</p>
2	<p>Review of Project and Previous Section 106 Tasks</p> <p>ST explained the overall purpose of the project and alternatives. JM provided an overview of the four-step Section 106 process, which is intended to assess project effects on historic resources (those previously identified as eligible for National Register of Historic Places [NRHP] listing). JM identified ground rules and reviewed previous coordination efforts undertaken to date as part of the Project.</p> <p>In response to comments received after the eligibility consultation in January 2013, Kensington Park was surveyed but was not recommended as eligible. Six potential historic districts were suggested; Green Street is recommended as eligible. Nine individual resources were suggested for reconsiderations. Of these, four resources are recommended as eligible based on supplemental information.</p>
3	<p>Overview of Alternatives</p> <p>JM presented an overview of the four alternatives that will be evaluated in the EIS: No Action, Bus Rapid Transit (BRT) along Michigan Avenue, the Union Pacific Railroad (UPRR) Rail Alternative, and the Halsted Rail Alternative.</p> <ul style="list-style-type: none"> - Q: Is the BRT park-and-ride lot on the north side of 130th Street? A: Yes. - Q: Why are the garages shown as three levels? As shown, it looks like a huge impact on Altgeld Gardens. A: Preliminary ridership analysis indicates park-and-ride demand, which is why we are proposing such large structures. As we fine tune the design moving forward, we'll re-evaluate the garage sizes and incorporate some urban design elements to mitigate the impact. - Q: How many properties would be removed along the Halsted route? A: We'll discuss this at the individual community meetings and Open House. The focus of this meeting is effects on historic resources. - Q: Are the piers for the Halsted line in the sidewalk or street? A: That will be determined in future engineering phases. The straddle bent piers could encroach into the parking lane. - Q: Would the Halsted piers have a similar placement to the structure at the Morgan/Lake? A: Halsted Street has two travel lanes and a parking lane in each direction and is wider than the configuration at Lake Street. The pier type chosen will make a difference on placement too. There could be impacts on parking spaces. <i>Follow up note: All traffic impacts would be covered in the Transportation section of the Draft EIS.</i> - Q: How high is the structure along Halsted? A: It varies – roughly 23-30 feet above ground level; the necessary height is determined based on the street clearance requirements. - Comment: In talking with business owners at Galloy & Van Etten Stone Contractors, they are worried about their large trucks being able to access their sites.
4	<p>Section 106 Effects on National Register of Historic Places Eligible Resources</p> <p>The team developed effects recommendations based on the conceptual alternatives described previously. JM stepped through each resource. The criteria for determining effects are defined in 36 CFR 800.5. For the three options of Union Pacific Railroad (UPRR) Alternative, the team examined the option that is closest to the historic resource, to represent the worst case analysis.</p> <ul style="list-style-type: none"> - Q: Will you be sending a copy of the slides? A: The Effects Report provides general information and distances and CTA will have additional

Item No.	Item Description
	<p>boards at the Open House, which will also be posted on CTA website. The effects slides contain preliminary deliberative materials so CTA will not be circulating copies.</p> <ul style="list-style-type: none"> - Comment: The Cottage/Bungalow District that Neighborhood Housing Services of Chicago (NHS) commented on in the eligibility comments shows up in the map near the Pump Station. - WM: How close is the East Option UPRR track structure to the Pumping Station? A: It is close and almost adjacent– we’ll have to look it up. <i>Follow-up note: Horizontally, it is about 8.8 feet between the pump station and track structure in the UPRR East Option. However this distance is based on conceptual engineering and can change slightly as additional detailed engineering is performed.</i> - Comment: If there is a future expansion along the UPRR line, we want to be sure that there is ample room to accommodate it. It would be good if the alternative were further from the building; I question whether it is actually a “No Effect” as shown. Response: It is a tight site at the Pumping Station. We are required to be outside of UPRR right-of-way. - Q: Does the analysis include staging areas as well? A: Yes. These are included in the footprints. - Q: How tall is the BRT garage by the Venetian Hall? A: 2 stories <i>Correction: it is 3 stories with some space for retail and community facilities at ground floor.</i> - Q: Are there any buildings in the footprint of the proposed garage? A: We looked at all the potential displacements associated with each alternative. There are no structures within the garage footprint that would be displaced. - Q: Is it a possibility to adopt/restore the Venetian Hall as part of the adjacent garage? Or incorporate similar elements in the garage design? A: If there is an adverse effect, we will try to mitigate that. We will look at improving the view of the garage and making it more street friendly. CTA can take this under consideration. - Q: NHS’ eligibility comments included the cast masonry structures, one of which appears immediately south of the Venetian Hall. What was the determination there? A: Those were determined non-eligible; several were surveyed and lacked integrity and/or distinguishing architectural features. There wasn’t a cohesive grouping either. - Q: What is the building across from the garage, next to Altgeld Gardens? A: There is a park; the buildings next to the park may be part of Golden Gate. - Q: What is the station like for UPRR at the west option? A: Trains stop, unload/load, and turn back. There is no yard or additional tracks at this location – the yard is proposed further north at 120th Street. - Comment: The garage could have a visual impact. Nothing else nearby is built at that scale/height. There may be an impact on the Altgeld Garden Historic District, which will likely gain historic significance into the future due to its association with President Obama. CTA should consider a more modest garage design. - Comment: Several parties would like to see a view of the West Terminal station option from directly across 130th Street at Altgeld. Response: Early communications with community members indicated a local preference for the South Station option, which would have an entrance south of 130th Street. - Comment: Both 130th UPRR station options need further study – there will be impacts to transportation, people’s homes, etc. <i>Follow-up note: All other impacts will be discussed in the Draft EIS.</i> - Q: How difficult is it to cross from the south station to Altgeld or Philip Homes? A: 130th Street is on a viaduct that allows the tracks and platforms to extend under 130th Street. You wouldn’t have to cross 130th Street to get to the Station, only a local street. - Q: Are the viaducts safe for travel?

Item No.	Item Description
	<p>A: Vehicles travel on the 130th Street viaduct today.</p> <ul style="list-style-type: none"> - Q: Will a station include CTA/CDOT landscaping improvements to link to Altgeld? A: Definitely. A study was conducted focusing on access and connectivity at 130th Street Station. CTA has coordinated and will continue to coordinate with CHA to integrate plans. - Comment: At the Green Street Historic District, track structure will certainly be visible and audible. - Q: What level of noise impacts are anticipated along Green Street? A: Noise mitigation measures (e.g. noise walls, closed deck, etc.) have been incorporated into preliminary designs to mitigate impacts. <i>Follow-up: Based on the general level noise analysis conducted per FTA guidance, the Green Street Historic District lies at the edge of the moderate noise impact zone, assuming the project includes 3-4 foot high noise barriers and a closed deck structure. Historic experts will reexamine potential effects on the Green Street Historic District.</i> - Comment: I think property owners who live within the Green Street Historic District would be adversely affected by the Halsted Alternative. Response: That will definitely be looked at as part of the National Environment Policy Act (NEPA) analysis. - Comment: As you look at this more, it would be nice to have a rendering showing how close the tracks are and what the relationship will look like between the Halsted line and Green Street district. - Comment: The former substation is city-owned and vacant. Consider incorporating it into the station. Maybe it could be an entry point. This provides a good opportunity to give back to the community by adopting some of the Chicago Historic Resources Survey Orange buildings, similar to measures at the Wilson station. - Comment: The French Eclectic House would experience the same impacts as Green Street. There are several nice homes within this block, possibly nicer than the resources along Green Street, though they lack the consistency of Green Street. Scale and noise will be issues. These areas could be negatively impacted, driving people to move out of the area. - Comment: Galloy and van Etten is a family business and has been in the area since 1899. Photos show the building dating to 1909; it is a huge resource for the area. The business owner feels like they would be so adversely affected by the Halsted Alternative that they would have to relocate. It is a fourth generation family-owned business and provides a lot of employment. They are also concerned about the proximity to the 119th Street yard. - Comment: A lot of businesses are within the 119th Street yard. It used to feed all of Roseland with jobs. Many of the buildings have been demolished but some are left and could be negatively impacted. Response: CTA is coordinating with Far South Community Development Corporation regarding potential impacts on businesses. - Comment: Several consulting parties requested renderings for the four adversely affected resources along Halsted. - Q: What about impacts on the rest of the cemetery? A: Only the gatehouse/entryway is considered eligible. Comment: The impacts on the cemetery will be assessed as part of NEPA analysis. - Q: Is the fire station within the rail yard still accessible? A: Yes. - Comment: By placing the tracks so close to the resource, are you precluding future viability of the resource to function? This is an issue at the fire station and the St. Peter & Paul Church in particular. TT: The fire station's current location isn't particularly viable as it is today. Perhaps relocating this building should be a consideration as part of mitigation, although we don't typically like to

Item No.	Item Description
	<p>move structures. The fire station would be more viable on an arterial. The trend city-wide has been to close a number of these smaller structures.</p> <ul style="list-style-type: none"> - Comment: We've heard some good ideas regarding mitigation, but there are a few steps between now and then. We still have to have a selected alternative before developing detailed mitigation measures.
5	<p>Schedule and Next Steps</p> <p>There is an open house next week. A Draft EIS is being prepared, which will include additional analyses and public involvement opportunities.</p> <ul style="list-style-type: none"> - Q: When would a single preferred alternative be selected? A: The Final EIS would be prepared on a single alternative. - Q: Is there a way to understand whether any of the resources we identified in the eligibility phase that were not determined eligible would be affected? A: They were not examined as part of this analysis since we evaluated only eligible buildings or districts for Effects determination. - Comment: Please resend the responses to eligibility comments.

Please notify ST of any corrections and/or clarifications to the minutes within five (5) business days.

cc: Attendees

Red Line Extension (RLE) Summary of Effects Comments received from the Consulting Parties and Responses from the Project Team

The following paragraphs briefly summarize comments received from the consulting parties regarding the project effects on historic resources for the RLE Project and corresponding responses from the project team. Under the Section 106 consultation process, the Chicago Transit Authority (CTA) undertook an extensive data collection and analysis effort during fall 2012 to identify historic resources located within the Area of Potential Effect (APE) for the three build alternatives that are under evaluation in the RLE Draft Environmental Impact Statement (EIS). This analysis culminated in recommendations regarding the potential eligibility of historic resources pursuant to the National Historic Preservation Act of 1966. These recommendations were presented to the ten consulting parties, including the Illinois Historic Preservation Agency (IHPA), during a meeting on January 30, 2013. Input from consulting parties was considered throughout 2013, resulting in 13 individual properties and two historic districts being identified as eligible under the National Register of Historic Places (NRHP) criteria.

Following this step in the consultation process, CTA undertook an analysis of effects on NRHP-eligible historic properties in accordance with criteria established in 36 CFR 800.5. This analysis culminated in recommendations regarding the potential effects on historic resources, which were mailed to consulting parties on April 18, 2014, requesting any written comments by May 23, 2014. An in-person meeting was conducted on May 8, 2014 to discuss these recommendations. Participants were asked to provide relevant information from their perspective that may supplement the effects recommendations summarized in the April 18 packet. Written comments were received from the following four organizations:

- Anne Haaker, Illinois Historic Preservation Agency (IHPA)
- Lisa DiChiera, Landmarks Illinois
- Matt Cole, Neighborhood Housing Services of Chicago
- Terry Tatum, City of Chicago, Department of Planning and Development, Historic Preservation Division

Comments and responses are presented by general topic below. Based on local knowledge and input from the consulting parties, additional analysis was undertaken regarding historic resources within the APE. The original recommendations presented in April/May 2014 will be revised as described below and presented in the RLE Draft EIS.

The CTA announced on August 10, 2014 that as part of its planning process to extend rail service to 130th Street on the far South Side, it has narrowed down the alternatives to two preliminary options for the proposed RLE Project. Based on feedback received from the public this spring and summer via community meetings and comments provided to the agency, the CTA is now focusing on one “preferred alternative” with two possible variations from the three build alternatives that have been under consideration. The CTA believes these options would best serve communities and residents on the Far South Side:

- Union Pacific Railroad Rail (UPRR) Alternative, East Option. Under this option, CTA tracks would be placed immediately east of the Union Pacific railroad right-of-way from 99th Street to 118th Street

- UPRR Alternative, West Option. Under this option, CTA tracks would be placed immediately west of Union Pacific's right-of-way from 99th Street to north of 118th Street.

The proposed alignment of the rapid transit line would be the same for the two East and West options north of 99th Street and south of 118th Street.

Eligibility Reconsideration Requests

1. Resurvey the grouping of Chicago bungalows and frame cottages at 103rd Street to 104th Place between the UPRR line and Princeton Avenue.

Nine resources (Chicago bungalows and frame cottages) were surveyed as part of the representative sample of surveys. Although the area contains numerous residences with similar architectural styles, massing, setbacks, and construction dates, architectural historians verified that these properties do not retain sufficient integrity for the NRHP as a district due to contemporary alterations (e.g., replacement siding, porches, windows, and doors). None were found to merit individual listing for the NRHP due to their integrity. Numerous vacant lots disrupt the visual cohesiveness of this area. Despite the general consistency in property types, the collection of bungalows and frame cottages is broadly representative of residential areas on the South Side, lacking the distinguishing elements to qualify as NRHP eligible. Please refer to forms 301, 306, 321, or 326 W 103rd Place; 262, 328, or 335 W 104th Place; or 310 or 325 W 104th Street on the Eligibility DVD provided to consulting parties on January 4, 2013 for specific examples.

2. Reconsider eligibility determinations for cast stone-faced residences adjacent to the UPRR right-of-way, including the property adjacent to the Venetian Hall.

The properties adjacent to the Venetian Hall are a brick two-flat (129 E Kensington Ave on southwest side) and a vinyl-clad multi-residence (141 E Kensington Ave on the east side). Neither building exhibits distinctive architectural features or sufficient integrity for inclusion on the NRHP. Likewise, the two cast stone-faced houses facing the Venetian Hall (122 and 136 E Kensington Ave) do not feature distinctive architectural elements or sufficient integrity for inclusion on the NRHP. Architectural historians verified that these properties do not retain sufficient integrity for the NRHP due to contemporary alterations (e.g., replacement porch, windows, and doors), compromising the historic materials and workmanship. No cohesive set of similar properties has been identified in the vicinity that would merit consideration as a potential historic district or multiple property grouping.

3. Reassess the area around 111th Street at Emerald Avenue for a potential district.

CTA has narrowed down the alternatives for the RLE Project and the Halsted Alternative is no longer being pursued. The area around 111th Street at Emerald Avenue is distant from the UPRR Alternative corridor and would not be affected by the RLE Project.

Effects Reconsideration Requests

4. Reevaluate the visual, noise, and economic effects of the Halsted Alternative on the Green Street Historic District, which could have a significant impact on the quality of life without proper mitigation.

CTA has narrowed down the alternatives for the RLE Project and the Halsted Alternative is no longer being pursued. The Green Street Historic District is distant from the UPRR Alternative

corridor and would not be affected by the RLE Project.

5. Reassess No Effect finding for the Altgeld Gardens Historic District based on the UPRR Alternative. The proposed station and garage would alter the landscape; a rendering should be developed.

Altgeld Gardens Historic District is eligible for NRHP listing under Criterion A (i.e., events that have made a significant contribution to the broad patterns of American history on a local, state, and/or national level) based on its association with community development, planning, and social history. As defined by 36 CFR 800.5, an adverse effect on this resource would be an “alteration to the characteristics of a historic property qualifying it for inclusion in or eligibility for the NRHP.” While the UPRR Rail Alternative would increase transportation choices and improve access for this geographically isolated area, none of the proposed infrastructure improvements in the vicinity would significantly alter the characteristics that qualify the district as eligible for NRHP listing. As part of the UPRR Rail Alternative, an at-grade station and parking facilities would be constructed in one of two locations to provide access to the Altgeld Gardens Housing Project: a South Station Option or a West Station Option. Either station location option is separated from Altgeld Gardens Historic District by a multi-lane street (i.e., E. 130th Street and/or E. 130th Place). Preliminary plans for each terminal station option would include parking for 2,300 vehicles through a combination of a parking structure and surface parking lots.

The South Station Option parking structure for the UPRR 130th Street Station is approximately 800 feet from Altgeld Gardens Historic District at its closest point; the parking structure would not be visible from within the historic district and would not adversely affect the historic district.

The West Station Option parking structure for the UPRR 130th Street Station is approximately 400 feet from Altgeld Gardens Historic District at its closest point and would only be visible from the outer line of buildings on the north side of the Altgeld Gardens development. This outer row of buildings would obstruct the view of the parking structure from interior buildings and streets. The construction of the West Station Option would not adversely affect the characteristics that qualify the district as eligible for NRHP listing, i.e. its association with community development, planning, and social history.

As the project would not adversely affect the integrity of the district or its association with community development, planning, and social history, any visual simulation rendering and any appropriate mitigation measures identified would occur independent of the formal Section 106 consultation process for this resource.

The UPRR Alternative has been selected as the National Environmental Policy Act (NEPA) Preferred Alternative, and an additional rendering of the station will be developed and presented as part of the Draft EIS to assist local stakeholders in understanding the extent of visual impacts created by the project.

6. Reassess No Effect finding for the Roseland Pumping Station based on the UPRR Alternative. For the UPRR East Option, the track structure is approximately 8.8 feet from the side of the building at its nearest point. It should be noted that an existing at-grade freight line runs in close proximity to this location. The pumping station would not be displaced or directly affected by the UPRR Rail Alternative. The changes in the setting (e.g., visual, noise, vibration, etc.) would

not adversely affect the characteristics that qualify the resource as eligible for NRHP listing, i.e. its architecture.

The UPRR West Option would also not affect the characteristics that qualify the resource as eligible for NRHP listing.

7. CTA should develop appropriate renderings for all properties in the APE where there was a finding of No Adverse Effect or Adverse Effect.
CTA will develop additional visual simulation renderings, for inclusion in the Draft EIS, of the UPRR Alternative, which has been selected as the NEPA Preferred Alternative. Renderings are particularly helpful in understanding the extent of visual impacts and in developing appropriate mitigation measures for any adversely affected historic resources.

At the current stage of Effects consultation, additional renderings would not change the effects findings for NRHP-eligible resources. Justification for effects findings was provided in the effects report mailed to consulting parties and additional justification is included in this document. As a reminder, the key consideration is whether the project would alter the specific characteristics that qualify a resource as eligible for the NRHP.

In addition to the Historic impacts, the Draft EIS will also include a discussion of the potential visual impacts of the RLE Project alternatives, including general renderings of the alternatives that were prepared to assess those impacts. Some of those renderings were also presented at the May 13th CTA open house and the exhibit boards can be viewed at http://www.transitchicago.com/assets/1/red_ahead/MS_CWC_CL_RLE_Exhibit_Boards_lowres_FINAL_20140515.pdf

8. Renderings should be developed for any NRHP or Chicago Historic Resources Survey (CHRS) Orange properties potentially impacted by the close proximity of the proposed elevated track structures.
See Response #7.
9. The property owner of the Galloy and Van Etten Stone Contractors business is concerned about their access and viability if the Halsted Alternative is built.
CTA has narrowed down the alternatives for the RLE Project and the Halsted Alternative is no longer being pursued. The Galloy and Van Etten Stone Contractors business is distant from the UPRR Alternative corridor and would not be impacted.
10. Noise studies should be undertaken to demonstrate that the introduction of the elevated rail structure on Halsted would not adversely affect historic resources within the APE of that route.
CTA has narrowed down the alternatives for the RLE Project and the Halsted Alternative is no longer being pursued. Noise analysis has been conducted per Federal Transit Administration (FTA) guidance and mitigation measures have been identified, which will be presented in the Draft EIS.
11. The French Eclectic House would experience the same impacts as Green Street. Scale and noise would be issues. These areas could be negatively impacted, driving people to move out of the area.

CTA has narrowed down the alternatives for the RLE Project and the Halsted Alternative is no longer being pursued. The French Eclectic House is distant from the UPRR Alternative corridor and would not be affected by the RLE Project.

Other Comments

12. In general, we [IHPA] concur with the findings concerning historic architectural resources presented in the draft report. The Bus Rapid Transit (BRT) Alternative would have the least impacts, followed by the UPRR Alternative.
13. The potential to encounter archaeological resources needs to be addressed. If the potential for undisturbed archaeological resources exists, a survey will be required.
No previously recorded archaeological sites fall within the RLE APE and therefore the project would produce no effect on known archaeological resources. The need for and extent of further archaeological investigations will be determined in consultation with IHPA.
14. CTA should consider incorporating the city-owned, vacant historic substation (10227 S. Halsted Street) into plans for the nearby station.
CTA has narrowed down the alternatives for the RLE Project and the Halsted Alternative is no longer being pursued; the vacant historic substation would not be affected by the RLE Project.

Chicago

Red Line Extension

From Existing 95th Street Station to Approximately 130th St. and Halsted St.

IHPA Log #001010713

May 22, 2014

Sonali Tandon

Chicago Transit Authority

567 W. Lake St.

Chicago, IL 60661-1498

Dear Ms. Tandon:

Thank you for requesting comments from our office concerning the possible effects of the referenced project on cultural resources. Our comments are required by Section 106 of the National Historic Preservation Act of 1966, as amended, and its implementing regulations, 36 CFR 800: "Protection of Historic Properties".

We are in receipt of the 2014 *Draft Effects Report*, and appreciated the opportunity to participate in the May 8, 2014 meeting at the CTA where your findings were presented. In general we concur with the findings concerning historic architectural resources presented in the draft report. However, the report indicates that noise walls will reduce the amount of noise that resources such as the proposed Green Street Historic District will experience. Noise studies that include current conditions will need to be undertaken to demonstrate that the introduction of the elevated rail structure on Halstead will not adversely affect historic resources located within the APE of that route.

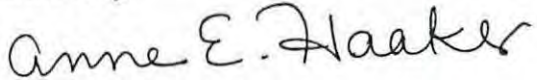

It was noted in the report that archaeological resources may be uncovered during construction activities and that they would be investigated once found. At a minimum, the potential to encounter archaeological resources needs to be addressed and the results need to be presented to this office for review. If the potential for undisturbed archaeological resources exists within the areas of potential effect, a survey will be required.

As previously stated, it is our opinion that the proposed BRT route will affect the least amount of cultural resources located within its APE. We also believe the UPRR route that is often adjacent to existing railroad tracks will affect fewer resources than the elevated line proposed on Halsted Street.

We look forward to reviewing the final historic resources report once the preferred alternative has been selected and all cultural resource surveys have been completed.

If you have questions please contact David J. Halpin, Cultural Resources Manager, at 217-785-4998.

Sincerely,

A handwritten signature in black ink that reads "Anne E. Haaker". The signature is fluid and cursive, with the first name "Anne" and last name "Haaker" being more prominent than the middle initial "E".

RE: Red Line Extension – Potential Effects Consultation Comments

Dear Ms. Tandon,

Thank you for the opportunity to review on May 8th the Red Line Extension team's findings and recommendations regarding historic properties in the APE. We are pleased to see some additions made to the list of National Register-eligible properties and the identification of orange-rated buildings in the Chicago Historic Resources Survey (CHRS) based on our February 18, 2013 letter.

From the May 8th meeting, we have the following comments:

- We strongly recommend that better renderings are produced to illustrate the potential impact of a UPRR West Station and four-story parking garage on 130th Street and the adjacent Altgeld Gardens Historic District.
- We agree with comments made during the meeting that the "No Effect" determination made for the Roseland Pumping Station, 351 W. 104th St., and Altgeld Gardens Housing Project Historic District, under the UPRR Rail scenario, should be reassessed as potentially having an "Adverse Effect" determination.
- We recommend producing renderings that will illustrate the "Adverse Effect" on National Register-eligible properties in the Halsted Rail scenario. This is particularly important if the proximity of rail tracks could potentially make these properties less viable in the future. These properties include:
 - The Former Classic Revival Substation, 10227 S. Halsted St.
 - The S.S. Peter & Paul Catholic Church at 12433-12439 S. Halsted St.
 - Cedar Park Cemetery Entryway and Gatehouse, 12540 S. Halsted St.
 - Fire Department Engine Company 115, 931 W. 120th St.
- While we understand that the design phase of a Halsted Rail scenario, if selected, will be some time later, we would like consideration to be made of incorporating the city-owned and vacant historic substation at 10227 S. Halsted St. into plans for a station that was indicated would be built in that vicinity.
- Lastly, we support the reassessments suggested by Matt Cole of Neighborhood Housing Services in his May 14, 2014 letter.

Again, thank you for the opportunity to review the findings by your team for this project.

Sincerely,

Lisa DiChiera
Director of Advocacy

RE: Red Line Extension – Potential Impacts to National Register Eligible Properties in APE

Dear Ms. Tandon,

Thank you again for inviting NHS to participate in the Section 106 review process for the Red Line Extension project. We believe that extending the Red Line will ultimately enhance the livability and well-being of the greater Roseland-area. At the same time, as an organization rooted in the use of asset-based community development strategies, we wish to ensure that the project minimizes any undue impacts on the existing residential, community, and historic buildings that make these neighborhoods great and that our experience has shown can be important community-building and engagement assets. Therefore, based on the information presented in the May 9th Effects Meeting, we recommend that the following additional actions be undertaken by the project team before any mitigation planning is undertaken:

- Develop appropriate and assessable renderings for all properties in the APE where there was a finding of No Adverse Effect or Adverse Effect. This currently includes the Former Venetian Hall, the Green Street Historic District, the Former Classical Revival Substation, Galloy and Van Etten Stone Contractors, S.S. Peter & Paul Catholic Church, Cedar Park Cemetary Entryway and Gatehouse, and Fire Department Engine Company 115. We also believe that such renderings should be created, as necessary, based on our recommendations below (e.g, re: Altgeld Garden Historic District).
- Re-Survey 103rd Street to 104th Place between the UPRR and Princeton Avenue: This area includes the previously identified, National Register-eligible Roseland Pumping Station and Roseland Fire Station properties. However, the blocks also include a largely intact and well-maintained grouping of Chicago bungalows and frame cottages. We would encourage the project team re-survey these blocks to determine if these residential properties could contribute to a future National Register district, as well as any potential impact that a UPRR-located elevated train line would have on such a district.
- Reassess Determination that Cast Stone-faced Residences in APE are not National Register Eligible: Several of these buildings, which look similar to Chicago Greystones and are relatively rare, were observed adjacent to the UPRR right-of-way. This includes the 2-flat on Kensington Avenue immediately east of the Former Venetian Hall.
- Reassess Finding of No Adverse Effect on Potential Green Street Historic District: Re-evaluate visual, noise, and economic effects of a Halsted-located elevated train line on homes along Green

Street. While such train lines do run through other residential areas of Chicago (e.g., Pink Line), this corridor would be new and could have a significant impact on the quality of life of the area without proper mitigation.

- Reassess Area Around 111th Street and Emerald Avenue for Potential Historic District: Re-survey area around 11310 South Emerald (Emerald, Union, and Wallace Avenues) for eligibility as a historic district. If determined eligible, assess effect of a Halsted-located elevated train line on the district.
- Reassess Finding of No Effect of a UPRR West Station on Altgeld Gardens Historic District: The proposed station, station house, and four-story parking garage would be located immediately to the north of Altgeld Gardens. The height of the parking garage would be taller than any other properties in the area and would likely loom above the landscaped tree line of 130th Street. The existing rendering of the proposed station developed by project team is inadequate to assess the effect of the station due to its oblique view from the west.

Thank you again for inviting NHS to participate in the Section 106 review for the Red Line Extension project. Please let us know if we can be of further assistance before the next scheduled consultation.

Best,

Subject: Red Line Extension Historic Properties Consultation

Dear Ms. Tandon,

Thank you for hosting the consulting parties meeting held at CTA headquarters on May 8, 2014 for the Red Line Extension Historic Properties Consultation. We appreciate the opportunity to comment on the draft effects to historic properties that were discussed at that meeting.

Based on information provided, our comments are as follows:

1. Properties determined to be historic and/or color coded orange in the Chicago Historic Resources Survey and that would be potentially impacted by close proximity of elevated tracks under any of the alternative routes being considered should have photo renderings executed to show the effect of such close proximity of tracks. This would mainly include properties along the Halsted St. alternative, but would also include the UPRR east alternative route as it would affect the Roseland Pumping Station.

Our office looks forward to continuing to work with you on this exciting undertaking.

Sincerely,

Terry Tatum

Appendix E

2014-2015 Red Line Extension Project Update

2014-2015 Red Line Extension Project Update

From 2012-2014, CTA evaluated benefits and impacts of four alternatives: the No Build Alternative, the Bus Rapid Transit Alternative (along Michigan Avenue), the Union Pacific Railroad (UPRR) Rail Alternative, and the Halsted Alternative. CTA evaluated three options of the UPRR Rail Alternative: Right-of-Way Option, East Option, and West Option. CTA also evaluated two options of the UPRR Rail Alternative 130th Street station: a South Station Option and a West Station Option. Based on the project description provided in Section 2 of this technical memorandum, CTA analyzed the impacts of these alternatives and station options. The benefits and impacts are included in the technical memoranda prepared in 2012-2014.

In August 2014, based on the technical analysis and public input, CTA announced the NEPA Preferred Alternative—the UPRR Rail Alternative. Additional conceptual engineering was conducted on the UPRR Rail Alternative to refine the East and West Option alignments. In addition, CTA is considering only the South Station Option of the 130th Street Station.

In late 2014 and early 2015, CTA conducted additional engineering and revised assumptions on the East and West Options to refine the alignments. The refinement of the East and West Options consisted of the following items:

- For the segment of the alignment along I-57, CTA shifted the proposed alignment from the median of I-57 to the north side of I-57 within the existing expressway right-of-way. The construction would be less complex, safer for construction workers, and have a shorter duration. The shift would also allow for fewer impacts to Wendell Smith Park for the East Option, and would allow for no permanent impacts to Wendell Smith Park for the West Option.
- CTA modified the curve speeds as the alignment heads south from I-57 along the UPRR tracks. The curve speed for both the East and West Options would be 35 mph.
- CTA shifted the East Option alignment near 103rd Street station to minimize impacts to Block Park and the Roseland Pumping Station.
- CTA modified the curves south of 103rd Street for both the East and West Options to 55 mph to maximize the train speed.
- CTA refined the layout of the 120th Street yard and shop to optimize yard operations. The refined layout of the yard would accommodate 340 train cars.

The refinement of the East and West Option alignments minimizes potential impacts to parks while providing flexibility for future design phases. The Draft Environmental Impact Statement contains the benefits and impacts of the refined East and West Option alignments and supersedes information presented in other chapters of this technical memorandum

Historic and Cultural Resources

The refined alignment did not create any additional or different effects on historic resources.

Based on feedback from Section 106 consulting parties, CTA prepared two additional photo simulations. **Figure 1** shows a photo simulation of the elevated track structure adjacent to the Roseland Pumping Station under the East Option.

Figure 1: Photo of Existing Conditions and Photo Simulation of the Elevated Track Structure adjacent to the Roseland Pumping Station, Facing South on Harvard Avenue

CTA also prepared a photo simulation of the 130th Street Station and parking garage as viewed from Altgeld Gardens, included as **Figure 2**.

In addition, Appendix D-3 of the *Historic and Cultural Resources Technical Memorandum* includes displacement maps. Please see Appendix I of the *Displacements and Relocation of Existing Uses Technical Memorandum* for displacement maps for the refined alignment.

**RE: CTA Red Line Extension Project, IHPA Log 001010713
FTA Section 106 Eligibility and Effects Determination**

Dear Dr. Leibowitz:

As part of its responsibilities under 36 C.F.R. § 800-Protection of Historic Properties, and the National Historic Preservation Act (NHPA), the Federal Transit Administration (FTA) is providing an update on the Section 106 consultation process for CTA's Red Line Extension (RLE) Project (Project) and requesting concurrence on determinations. The proposed Project will extend CTA's Red Line service an additional 5.3 miles from the Red Line's existing 95th Street Terminal to the vicinity of 130th Street. The extension would include three new intermediate stations with bus and parking facilities as well as a new terminal station. The Project is one part of CTA's Red Ahead Program to extend and enhance the entire Red Line.

FTA has previously determined that the Project will be a Federal undertaking as defined in § 800.16(y) and that it is a type of activity that has the potential to cause effects on historic properties. Over the past four years, FTA and CTA have conducted a Section 106 consultation process in coordination with the Illinois Historic Preservation Agency (IHPA) and other Consulting Parties. The following provides a chronology of these activities:

- 6/25/2012: FTA sent a letter to IHPA authorizing CTA to initiate the consultation process for the RLE Project.
- 7/20/2012: Conference call hosted by FTA and CTA with IHPA to introduce the Project, and discuss the Area of Potential Effects (APE), including a representative sampling methodology for surveying resources within the APE.
- 8/13/2012: FTA and CTA sent invitations to local organizations to become a Section 106 Consulting Party for the Project.
- 10/24/2012: FTA and CTA held a kickoff webinar with the Section 106 Consulting Parties. Items discussed included an overview of the Section 106 process, Consulting Parties' roles

RE: CTA Red Line Extension Project, IHPA Log 001010713
FTA Section 106 Eligibility and Effects Determination

in the process, general project information, the proposed Project APE, and Project alternatives.

- 1/30/2013: FTA and CTA held a Section 106 Eligibility Meeting with IHPA and Consulting Parties.
- 10/10/2013: FTA and CTA sent a Response to Comments to Consulting Parties and IHPA regarding findings on the eligibility of historic resources within the then current Project APE.
- 5/8/2014: FTA and CTA held a Section 106 Effects Meeting with IHPA and Consulting Parties to discuss the Draft Effects Report.
- 11/24/2014: FTA and CTA sent a Response to Comments to Consulting Parties and IHPA regarding findings on the effects on historic resources within the Project APE.

As part of the Project's National Environmental Policy Act (NEPA) Environmental Impact Statement (EIS) documentation, FTA and CTA have prepared the RLE Historic & Cultural Resources Eligibility and Effects Summary Report (the Summary Report) for the Project with appendices that include relevant materials from the Section 106 consultation process. A copy of the Summary Report is enclosed on a CD for your review.

In August 2014, based on the technical analysis, revised project Purpose and Need, and public input received to that point, CTA announced the NEPA Preferred Alternative—the UPRR Alternative, featuring an East and West Option. Eliminated from further review and analysis were the Bus Rapid Transit (BRT) Alternative, Union Pacific Railroad (UPRR) Alternative – Right-of-Way Option, and the Halsted Alternative, as well as the UPRR Alternative – West Station Option for the 130th Street station. As a result of these project changes, the APE has been revised to only incorporate the area around the UPRR Alternative (East and West Options). See Figure 2-4 in the Summary Report provided for the revised APE.

As described in the chronology above, on November 24, 2014, CTA provided responses to all comments received from the Consulting Parties in May of 2014. This comment response communication noted that the Project alternatives had been further narrowed, and that the UPRR Alternative (East and West Options) were proposed to move forward as the NEPA Preferred Alternative. Additional details on the Project alternatives development process and history, including the entirety of alternatives evaluated between 2012 and 2014 as part of the Section 106 consultation process for this project, are provided in Attachment 1 of the Summary Report.

Based on research conducted by CTA and documented in the Summary Report and its appendices, FTA has determined the following for the RLE Project:

280 resources over 50 years of age are located within the revised Project APE. Of these, 7 are eligible for the National Register of Historic Places (NRHP), including 6 individual buildings and 1 historic district. As summarized in the table below, of the 7 NRHP-eligible resources within the APE, 6 will experience **No Historic Properties Affected** and 1, the Roseland Pumping Station, will have **No Adverse Effect** as a result of the RLE Project.

RE: CTA Red Line Extension Project, IHPA Log 001010713
FTA Section 106 Eligibility and Effects Determination

ID	Description	Union Pacific Railroad Alternative East Option Effects Finding	Union Pacific Railroad Alternative West Option Effects Finding
1	Eclectic Neo-Traditional Home	No Historic Properties Affected	No Historic Properties Affected
2	Fire Department Engine Company 93	No Historic Properties Affected	No Historic Properties Affected
3	Roseland Pumping Station	No Adverse Effect	No Historic Properties Affected
4	Romanesque Revival-Style Church	No Historic Properties Affected	No Historic Properties Affected
5	Roseland Community Hospital Nurses Home	No Historic Properties Affected	No Historic Properties Affected
6	Former Venetian Hall	No Historic Properties Affected	No Historic Properties Affected
7	Altgeld Gardens Historic District	No Historic Properties Affected	No Historic Properties Affected

NRHP = National Register of Historic Places

As a result of these determinations, no mitigation measures would be required, and consultation with Consulting Parties is considered complete. Coordination with IHPA will continue through the remainder of the project.

Pursuant to the Section 106 implementing regulations at 36 C.F.R. § 800, FTA is seeking State Historic Preservation Officer (SHPO) concurrence with the revised APE, as well as the above eligibility and effects determinations, within 30 days of receipt of this letter.

If FTA can provide any assistance or additional information which would aid in your prompt reply, please feel free to contact Mark Assam, Environmental Protection Specialist at 312-353-4070. Thank you for your assistance.

Sincerely,

Jay M. Ciavarella
Director, Office of Planning & Program Development

Section 1

Summary

This document summarizes information previously provided on the results of technical analysis on potential historic and cultural resources affected by the Chicago Transit Authority (CTA) Red Line Extension (RLE) Project and consultation conducted under Section 106 of the National Historic Preservation Act (NHPA). Because CTA narrowed the selection of alternatives under evaluation during project development (see **Attachment 1**) after Section 106 consultation had significantly progressed, this document has been developed to provide the Illinois Historic Preservation Agency (IHPA) with a streamlined and concise summary of the Area of Potential Effect (APE) for the project and eligibility and effects determinations made to date by the Federal Transit Administration (FTA). All Section 106 findings on alternatives considered that are presented in this document are consistent with previous correspondence and materials provided during the Section 106 consultation process.

1.1 Regulatory Framework

Cultural and historic resources are protected by various federal regulations; Section 106 of the National Historic Preservation Act (NHPA) requires federal agencies to consider effects on historic resources from their actions and to balance preservation needs with the need for the actions. As provided in 36 CFR § 800, the Section 106 process "seeks to accommodate historic preservation concerns with the needs of federal undertakings through consultation" (36 CFR § 800.1(a)). The goal of the consultation is to identify historic properties potentially affected by the undertaking, assess project effects, and seek ways to avoid, minimize, or mitigate any adverse effects on historic properties.

For the Section 106 assessment of historic and archaeological resources, FTA and CTA conducted a four-step process following requirements of 36 CFR § 800:

1. **Define the Area of Potential Effects** - FTA and CTA first determined an APE for cultural/historic resources. The APE is defined as the geographic area within which the project may cause alterations in the character or use of historic properties. Development of the APE involved site visits and a review of aerial photography images and conceptual engineering drawings for the alternative.
2. **Identify Historic and Archaeological Resources** - After an extensive records check, representative samples within the APE footprint were field-surveyed to identify any archaeological resources and historic resources that meet National Register of Historic Places (NRHP) criteria. Representative samples were used to determine effects on similar properties on a block-by-block basis. The properties included in the representative sample were determined using GIS databases provided by the City of Chicago, the Historic and Architectural Resources Geographic Information System, online mapping resources, State Historic Preservation Office (SHPO) records, and field visits. Additional details about the definition of the representative sample, and resources in it, are included in **Section 3** of

this report. NRHP criteria are defined in 36 CFR § 60.4 and apply to districts, sites, buildings, structures, or objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association with one or more of the following four criteria:

- Criterion A - Events that have made a significant contribution to the broad patterns of American history on a federal, state, and/or local level
- Criterion B - Lives of persons significant in the history of the city, state, and/or the United States
- Criterion C - Distinctive characteristics of a type, period, or method of construction, or the work of a master, or high artistic values, or a significant and distinguishable entity whose components may lack individual distinction
- Criterion D - Information important in prehistory or history

FTA and CTA identified properties listed on the NRHP, local landmarks, and Chicago Historic Resources Survey (CHRS) “Red” and “Orange”-rated¹ buildings (properties with locally designated historic importance). FTA and CTA conducted background research to assist this process, using the Historic and Architectural Resources Geographic Information System and city records, fire insurance and other historic maps, the CHRS, previous architectural studies in the area, and other relevant scholarly publications. No properties or districts currently listed on the NRHP are present in the APE.

3. **Assess Effects on Historic and Archaeological Resources** - FTA and CTA assessed effects for each evaluated resource that was listed in the NRHP or determined eligible for listing. The effects analysis included review of specific direct and indirect impacts that were evaluated for the project (for topics such as displacements, noise, and visual impacts) and focused on how the alternative might alter the characteristics that qualify properties for inclusion in the NRHP.
4. **Resolve any Adverse Effects** - FTA and CTA will develop any necessary mitigation measures through consultation with the SHPO and other consulting parties to address adverse effect determinations. Based on the results of the assessment of effects conducted, there would be no adverse effects to historic properties resulting from the project and no additional mitigation measures are proposed.

¹ The CHRS is an inventory of architecturally and historically significant buildings in the City of Chicago that uses a color-coded ranking system used to identify historic and architectural significance relative to age, degree of external physical integrity, and level of possible significance. The two highest color codes are “Red” and “Orange.” These types of local historic resources are subject to the City of Chicago’s Demolition-Delay Ordinance. “Red” or “Orange”-rated properties were identified as possessing some architectural feature or historical association that made them potentially significant in the context of the surrounding community.

1.2 Section 106 Consultation History and Evolution

In accordance with requirements for consultation established in Section 106 of the NHPA, three distinct rounds of coordination occurred during the RLE Project: initiation activities, identification of historic properties, and assessment of effects. In August 2012, FTA and CTA invited 11 Native American tribes and 19 state and local preservation interest groups to participate in the upcoming consultation process. At present, 11 groups are participating in the process. On October 24, 2012, FTA and CTA held a webinar on RLE historic properties to introduce the project and initiate the consultation process.

As part of the eligibility phase, CTA surveyed 541 potentially eligible resources within the APEs for all alternatives being studied at the time (Bus Rapid Transit [BRT], Union Pacific Railroad [UPRR], and Halsted Alternatives). FTA and CTA provided draft materials on the identification of NRHP-eligible properties to consulting parties on January 4, 2013 and followed it with an in-person meeting on January 30, 2013. As a result of the field investigations and comments received from consulting parties on potentially eligible resources, for all alternatives, 15 total resources were identified as eligible for inclusion on the NRHP, including 13 individual buildings and 2 historic districts.

FTA and CTA mailed a Draft Effects Report to consulting parties on April 18, 2014, requesting any written comments by May 23, 2014. On May 8, 2014, FTA and CTA met with consulting parties to discuss potential project effects on NRHP-eligible historic properties.

In August 2014, based on the technical analysis and public input, CTA announced the NEPA Preferred Alternative—the UPRR Alternative.

CTA had originally considered three alignment options for the UPRR Alternative: the Right-of-Way Option, the East Option, and the West Option. In 2014, the Right-of-Way Option was removed from consideration as it is no longer feasible. This option was added in 2012 in response to the CDOT feasibility study looking at moving UPRR freight operations out of the existing UPRR corridor before the RLE Project. The Right-of-Way Option would only be feasible if the separate project were implemented before implementation of the RLE Project. Coordination between local agencies and the railroads indicated that relocation of UPRR freight operations from this corridor presents considerable challenges; therefore, this option is no longer feasible. Because the Right-of-Way Option is not feasible, the Draft EIS evaluates only the East and West Options for the UPRR Alternative.

Additional conceptual engineering was conducted on the UPRR Alternative to refine the East and West Option alignments. In addition, CTA is now considering only the South Station Option of the 130th Street Station.

CTA provided responses to all consulting party comments received in May 2014 on November 23, 2014. Responses noted that the alternatives had been further narrowed and that the UPRR Alternative (East and West Options) were proposed to move forward as the NEPA Preferred Alternative.

1.3 Organization of this Report

The following sections of this report provide further details on development of the APE and eligibility and effects determinations made and presented during the Section 106 consultation process for this project.

Section 2 of this report provides a brief description of the No Build and Build Alternative (the UPRR Alternative) under consideration and details on identification of the APE.

Section 3 of this report provides a summary of the methodology undertaken to identify potentially affected historic and archaeological resources.

Section 4 of this report provides details on eligible historic and archaeological resources identified.

Section 5 provides details on the effects determinations for the East and West Options of the Build Alternative.

Section 6 summarizes the Section 106 consultation process conducted at each stage of the four-step Section 106 consultation process.

Section 2

Project Description and Area of Potential Effect

The RLE Project would extend the Red Line from the existing 95th Street Terminal to 130th Street. The proposed 5.3-mile extension would include four new stations near 103rd Street, 111th Street, Michigan Avenue, and 130th Street. Each new station would include bus and parking facilities.

The RLE Project would reduce commute times for residents, improve mobility and accessibility, and provide connection to other transportation modes. The RLE Project could also foster economic development, where new stations may serve as catalysts for neighborhood revitalization and help reverse decades of disinvestment in local business districts. The RLE Project would also provide a modern, efficient car storage yard and shop facility.

CTA undertook an extensive Alternatives Analysis process from 2006 to 2009 that considered multiple modes and corridor options for the RLE Project. The Chicago Transit Board designated the UPRR Alternative as the Locally Preferred Alternative on August 12, 2009. During 2012–2014 and as part of the Draft EIS analysis, CTA evaluated benefits and impacts of four alternatives: the No Build Alternative, the BRT Alternative (along Michigan Avenue), the UPRR Alternative, and the Halsted Alternative. CTA evaluated three options for the UPRR Alternative: the Right-of-Way Option, East Option, and West Option. CTA also evaluated two options of the UPRR Alternative 130th Street station: a South Station Option and a West Station Option. The Section 106 analysis and consultation was performed during 2012–2014, on all those alternatives and options. As further described in **Section 2.3**, CTA developed separate APEs for each alternative.

In August 2014, based on the technical analysis and public input until then, CTA announced the NEPA Preferred Alternative—the UPRR Alternative. While CTA had originally considered a UPRR Right-of-Way Option, this was subsequently removed as it is no longer feasible. This option was added in 2012 in response to the CDOT feasibility study looking at moving UPRR freight operations out of the existing UPRR corridor before the RLE Project. The Right-of-Way Option would only be feasible if the separate project were implemented before implementation of the RLE Project. Coordination between local agencies and the railroads indicated that relocation of UPRR freight operations from this corridor presents considerable challenges; therefore, this option is no longer feasible.

Because the Right-of-Way Option is not feasible, the Draft EIS evaluates only the East and West Options for the UPRR Alternative. CTA has chosen to move forward with the South Station Option at 130th Street based on technical analysis and public feedback. As further described in **Section 6**, the consulting parties were notified of the NEPA Preferred Alternative in November 2014 as part of the responses to consulting party comments on assessments of effect.

Additional details on the alternatives development process and history, including the entirety of alternatives evaluated between 2012 and 2014 as part of the Section 106 consultation process for this project, are provided in **Attachment 1**.

The Draft EIS focuses on the following alternatives, which emerged from the Alternatives Analysis, NEPA scoping process, and additional technical analysis and public input:

- No Build Alternative
- UPRR Alternative
 - East Option
 - West Option

2.1 No Build Alternative

The No Build Alternative is a required alternative as part of the NEPA environmental analysis and is used for comparison purposes to assess the relative benefits and impacts of implementing the UPRR Alternative.

The No Build Alternative represents future conditions if the UPRR Alternative were not implemented. The No Build Alternative includes all projects currently included in the fiscally constrained portion of the CMAP FY 2014–2019 Transportation Improvement Program (TIP). Projects in the TIP in the project area include renovation of the 95th Street Terminal, rail line maintenance and improvements, preservation of the North Pullman historic area, road resurfacing, coordination of traffic signal timing, and construction of a new bicycle/pedestrian facility. Impacts related to the construction and operation of the 95th Street Terminal are documented in the approved *95th Street Terminal Improvement Project Environmental Assessment* (CTA 2013b). FTA issued a Finding of No Significant Impact for the 95th Street Terminal Improvement Project in April 2013, and an Amended Finding of No Significant Impact in July 2013. FTA performed an Environmental Assessment Re-Evaluation in July 2016, which confirmed that the Amended Finding of No Significant Impact dated July 2013 remains valid. No new infrastructure would be built as part of the RLE Project under the No Build Alternative.

2.2 Build Alternative

The UPRR Alternative is shown in **Figure 2-1** and would extend the heavy rail Red Line 5.3 miles from the existing 95th Street Terminal to 130th Street. As noted above, the Chicago Transit Board designated the UPRR Alternative as the LPA at its August 12, 2009 board meeting. The UPRR Alternative would reduce transit travel times from the project area to points on the Red Line north of 95th Street (from 130th Street to 95th Street) from 28 minutes to approximately 14 minutes (CTA 2009). The following describe major aspects of the proposed alignment options under consideration, stations, park & ride facilities, 120th Street yard and shop, substations, and overview of the operations plan.

2.2.1 Alignment

Two alignment options adjacent to the UPRR are considered for this alternative: the East Option and the West Option. The CTA elevated structure would be located either east or west of the existing UPRR corridor. The alignment would follow the UPRR corridor to Prairie Avenue, where

it would cross over the Canadian National/Metra Electric District (CN/ME) tracks near 119th Street. South of this point, the East and West Options would follow the same alignment southeast along the Northern Indiana Commuter Transportation District/Chicago South Shore & South Bend Railroad (NICTD/CSS & SBRR) right-of-way using a portion of the Norfolk Southern Railway and Consolidated Rail Corporation (Conrail) right-of-way to the terminus (end) of the RLE at 130th Street.

As described, two UPRR Alternative options for the segment of the proposed alignment between I-57 and the CN/ME tracks near 119th Street are studied in the Draft EIS:

- East Option - The CTA elevated structure would be placed immediately adjacent to the east side of the UPRR right-of-way.
- West Option - The CTA elevated structure would be placed immediately adjacent to the west side of the UPRR right-of-way.

In the UPRR Alternative, the tracks would be on a new elevated (aerial) track structure from the 95th Street Terminal through the CN/ME track crossing near 119th Street. South of this elevated crossing, the tracks would transition to an at-grade profile (they would continue at ground level).

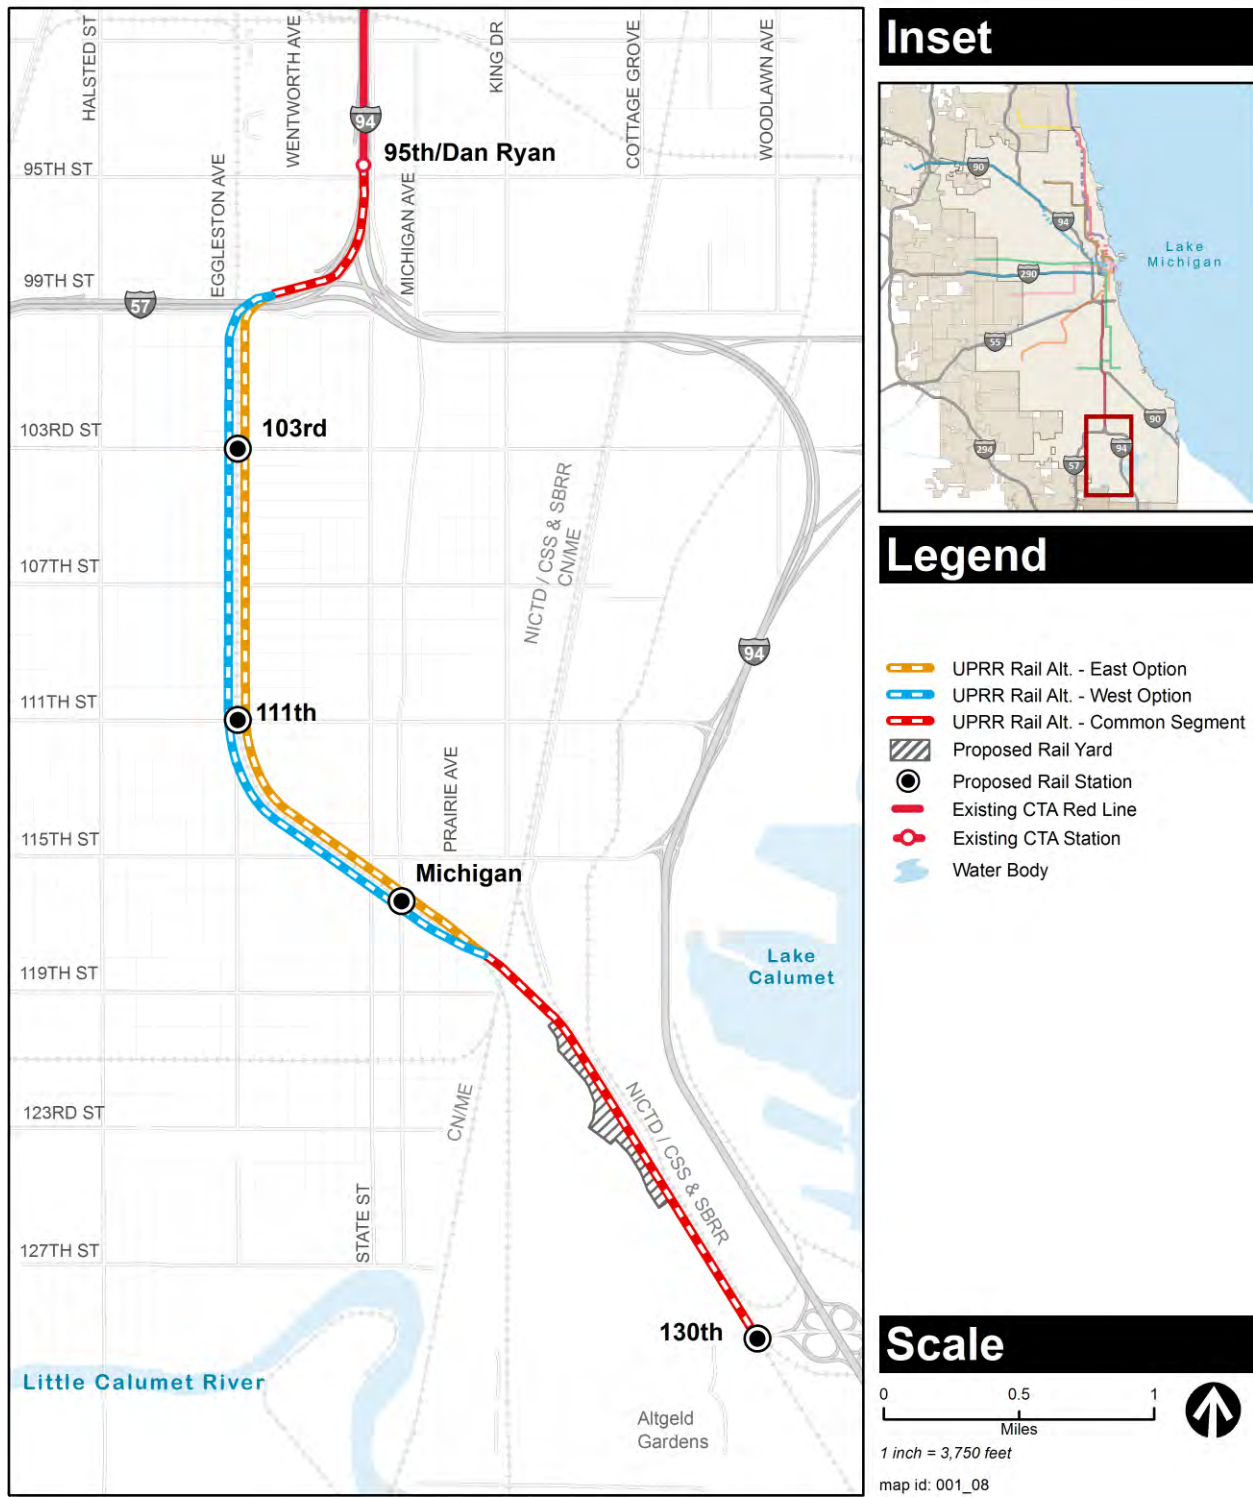

Figure 2-1: Red Line Extension Project Build Alternative

The proposed elevated structure would be a closed-deck, steel and concrete, aerial track structure with direct-fixation track and welded rail (welded at joints). With direct-fixation track, rails are mounted to specially designed concrete blocks fixed to the concrete deck. Noise barriers (approximately 4 feet in height, measured from the top surface of the concrete deck) are proposed for portions of the structure on both sides of the track deck to reduce noise transmission at and below track level. The structure would vary in height from 14 feet 9 inches to 40 feet above existing grade, depending on required clearances above existing roadways and railroads. The two tracks would have a spacing of 13 feet (13 feet between the track centerlines). The elevated deck, on which the tracks would run, would vary in width from approximately 30 feet to approximately 52 feet at stations

Figure 2-2 is a photo simulation of a typical proposed elevated structure above the UPRR right-of-way. The design shown is conceptual, and the actual design would vary based on further engineering and community input.

Figure 2-2: Photo Simulation of Union Pacific Railroad Alternative East Option at 111th Street Facing West - Typical Proposed Elevated Structure

2.2.2 Stations

As part of the UPRR Alternative, four new stations would be constructed at the following locations along the proposed alignment:

- 103rd Street (elevated station)
- 111th Street (elevated station)
- Michigan Avenue (elevated station)
- 130th Street (at-grade station)

Each station would have a center platform, approximately 26 feet wide and 520 feet long. Platforms would accommodate ten-car trains. Each station would be Americans with Disabilities

Act (ADA) accessible with elevators. Each station area would include areas for bus boarding, new crosswalks where needed to accommodate pedestrian traffic, and park & ride facilities. **Figure 2-3** is a photo simulation of a typical proposed station. The design shown is conceptual, and the actual design would vary based on further engineering and community input.

Figure 2-3: Photo Simulation of Union Pacific Railroad Alternative East Option at 103rd Street Facing Northwest - Typical Proposed Elevated Station

The 130th Street station would be located immediately west of the NICTD/CSS & SBRR right-of-way at 130th Street. Pedestrians from Altgeld Gardens would access the station from 130th Place. Pedestrians would not need to cross 130th Street to access the station because 130th Street goes over 130th Place and the railroad tracks.

2.2.3 Park & Ride Facilities

To accommodate passengers arriving at the UPRR Alternative stations by car, park & ride facilities would be constructed near each station, as described in **Table 2-1**. A total of 3,700 parking spaces would be available along the corridor. CTA estimated parking demand based on travel demand modeling performed in 2009. Bus turnarounds would be provided in the parking areas. The ground floor of the parking structure at the Michigan Avenue station would contain space for retail and community facilities.

Table 2-1: Summary of Park & Ride Facilities

Station	Number of Parking Spaces	Union Pacific Railroad Alternative East Option	Union Pacific Railroad Alternative West Option
103rd Street	200	Divided between two surface parking lots (one on the east side of the tracks and one on the west side of the tracks)	One surface parking lot
111th Street	200	Divided between two surface parking lots (one on the east side of the tracks and one on the west side of the tracks)	One surface parking lot
Michigan Avenue	1,000	Divided between a three-story parking structure and a surface parking lot (a surface parking lot on the east of the tracks and a parking structure on the west of the tracks)	Five-story parking structure
130th Street	2,300	Seven-story parking structure	

2.2.4 Yard and Shop

The 120th Street yard and shop, with a capacity of 340 train cars, would be sited on a combination of industrial and vacant land east of the CN/ME tracks and west of the NICTD/CSS & SBRR tracks near 120th Street and Cottage Grove Avenue. The yard would be entirely at grade. Parking spaces for CTA employees would be included at the yard.

2.2.5 Substations

Substations are buildings along the alignment that house equipment to regulate the flow of electricity to the third rail, which supplies power to the trains. Substations would be placed approximately 0.8 to 1 mile apart along the alignment. Six new and upgraded substation locations are proposed: 98th Street Yard and Shop, near 101st Street, near 107th Street, near Lafayette Avenue, within the 120th Street yard and shop area, and near the 130th Street station. CTA would confirm the need and location for substations during future design phases.

2.2.6 Operating Plan

The UPRR Alternative would operate 24 hours a day, each day of the year. Service frequency is anticipated to be the same as with the current service (April 2016) at 95th Street—approximately 6-minute headways during morning peak hours and approximately 3-minute headways during afternoon peak hours. Headways at night (between 1 AM and 4 AM) are approximately 13–15 minutes. Service frequency would be adjusted to accommodate demand once the RLE service has been implemented. Train frequencies would vary throughout the day (like existing Red Line service), and late night service would operate approximately every 15 minutes.

Train sets would be eight cars long. Stations and track alignment would accommodate ten-car trains to maintain the option of running ten-car trains in the future. With the extension of the Red Line, some existing bus routes would be rerouted to feed into the proposed stations.

2.3 Area of Potential Effect

In the context of Section 106, the APE is defined as “the geographic area or areas within which an undertaking may directly or indirectly cause alterations in the character or use of historic properties, if any such properties exist” (36 CFR 800.16.d). The APE for the RLE Project was delineated after considering the location of the proposed alternative; the potential for ground disturbance, destruction, or property taking; locations from which the undertaking may be visible and/or audible; and the scale and setting of the project. The APE was developed in consultation with CTA, FTA, and IHPA.

Cultural resource specialists developed the APE boundaries for the BRT, UPRR, and Halsted Alternatives in 2012 after conducting site visits and reviewing the aerial maps and engineering details (such as alignment locations, elevation of the proposed rail line, expected right-of-way limits, and the locations of the yard, stations, and parking facilities) for the Build Alternatives. SHPO concurred on the APE boundaries on July 20, 2012.

Generally, the APEs for the UPRR and Halsted Alternatives contain parcels within one block of the centerline of the alignment. The APE widens to accommodate the locations of each park & ride and the proposed yard and shop beyond the one-block boundary. The APE for the BRT Alternative includes the area immediately surrounding park & ride facilities.

As described above, in August 2014, based on the technical analysis and public input until then, CTA announced the NEPA Preferred Alternative—the UPRR Alternative. In late 2014, CTA also conducted additional conceptual engineering on the UPRR Alternative to refine the East and West Option alignments. FTA and CTA revised the APE for the UPRR Alternative accordingly and as shown in **Figure 2-4**. The revised APE presents no new effects from the UPRR Alternative than what was presented during consultation. Because the BRT and Halsted Alternatives are no longer under consideration, those APEs are no longer discussed.

Section 3

Methodology for Identification of Resources

3.1 Identification of Historic Resources

3.1.1 Background Research/Historic Context

Background research was conducted to describe the historic context for the project area. Understanding the historic context is essential in establishing the significance of individual properties, and by extension, and NRHP eligibility for the built environment. The following resources were consulted in developing the historic context and identifying known sites:

- The Historic Architectural Resources Geographic Information System (**HARGIS**) database was created by the IHPA in 2003 to manage information about Illinois historic properties; this database documents the state's built environment. The HARGIS database includes data gathered as a result of three statewide survey projects: the Illinois Historic Structures Survey, the Illinois Historic Landmarks Survey, and the Illinois Rural Survey (conducted 1970–1987). The HARGIS database also includes properties identified as part of a NRHP nomination, surveys by local preservation groups, and information from the Illinois Department of Transportation's Bridge Survey. The database includes data forms, photographs, background documentation, and spatial information within a geographical context for each historic property and historic district within the dataset.
- The **CHRS** is an inventory of buildings that was compiled during 1983–1995. The Chicago Department of Housing and Economic Development published its findings in a report titled *Chicago Historic Resources Survey: An Inventory of Architecturally and Historically Significant Structures* in 1996. Organized according to Chicago's 77 neighborhoods, the inventory lists over 17,000 architecturally and historically significant buildings and structures that predate 1940. The information is also available online and is searchable by neighborhood, building address, decade of construction, architect's name, building style and type, survey ranking, and landmark status.
- **Sanborn Fire Insurance maps** contain a wealth of information on the built environment in urban areas. Originally created and maintained to assess fire insurance liability, the maps provide dated contexts in which to describe the development of neighborhoods as well as the compositional components and historical use of individual buildings. Data especially useful for this project include the building footprint, number of stories, foundation material, and cladding material. The Sanborn maps are available online through subscription.
- **NRHP nomination forms** for individually listed historic properties and districts provide a wealth of contextual information for the individual properties and the historic districts. They include construction dates for most historic properties discussed therein and identify the architect in most instances.

Architectural datasets at the local level were reviewed as well, including information from the Commission on Chicago Landmarks.

The Commission on Chicago Landmarks recommends individual buildings, sites, objects, or entire districts to the Mayor and City Council for designation as Chicago Landmarks. To be recommended by the Commission for landmark designation, these resources must meet at least two criteria: (1) being valuable as an example of city, state, or national heritage, and (2) being historically significant—the site of a significant historic event, association with a significant person, architecturally significant, the work of a significant architect or designer, association with a significant historic theme, or a having unique visual feature. In addition, the potential landmark must maintain integrity in light of its location, design, setting, materials, workmanship, and ability to express such historic, community, architectural, or aesthetic interest or value. The Commission reviews any proposed alteration, demolition, or new construction affecting individual landmarks or properties in landmark districts as part of the permit review process. The Commission produces two new publications each year, one for individual landmarks and landmark districts and another for Chicago listings on the NRHP.

Using information in HARGIS and the other sources listed above, a list of previously identified historic and archaeologically-sensitive properties within the RLE APE was compiled and mapped. This effort included the identification of NRHP-listed districts and structures, and any properties identified as local landmarks in Chicago.

3.1.2 Surveys of Historic Resources

After the development of the APE and historic contexts, cultural resources specialists conducted field surveys on two distinct categories of properties: properties that would likely be displaced or demolished as a result of one or more alternatives, and a representative sample of other properties within the APE.

For both categories of properties that were surveyed, cultural resource specialists conducted archival research and photo-documented the exterior of each structure from the public ROW. Each property was assessed for NRHP eligibility using the data gathered during the fieldwork and research phases of the investigation.

The following subsection identifies how the representative sample in the latter category was identified. Because of the developed urban environment and linear nature of the project, effects on properties would be similar for adjacent properties. This method is consistent with November 2011 guidance provided by the Advisory Council on Historic Preservation regarding the “Reasonable and Good Faith Identification Standard in Section 106 Review.”

Defining the Representative Sample

To determine the properties to be included in the representative sample, the team’s architectural historian relied on the GIS database provided by the City of Chicago, the HARGIS database,

online mapping resources, SHPO records, and field reconnaissance. Examining the APE block by block, the historic character of each block was considered, including the following:

- What age are the buildings?
- What architectural styles are apparent?
- What types of buildings are present?
- How does the structure fit the context of the larger neighborhood?
- What function(s) do they serve?

In light of the neighborhood and block level contexts, analysts selected one or more properties per block to represent the range of buildings over 50 years in age throughout the area. In areas where the project would likely cause more substantial effects, a greater concentration of sample properties was selected. More sample properties were selected for heterogeneous blocks (e.g., blocks having a mix of property types and ages) than homogenous blocks. Where multiple similar buildings exist within the block, analysts selected the building with the greatest integrity or most distinguishing architectural features.

For example, block A contains only residential buildings, both Craftsman style bungalows and Minimal Traditional brick homes. Structures date to the 1920s and 1930s. The project would cause moderate effects on the adjacent block, but block A would be screened from the transit line by an existing row of buildings. Analysts therefore selected one bungalow and one Minimal Traditional house from this block. Alternatively, Block B contains a mix of residential and commercial properties, dating from 1902 through the 1950s, plus some modern infill. A mix of architectural styles is present. In this case, analysts selected five structures on this block to represent the cross-section of existing structures.

This process was repeated along the entire APE corridor.

3.2 Identification of Archaeological Resources

Cultural resource specialists conducted a records search to identify archaeological sites within the vicinity of the project area. The **Illinois State Archaeological Survey (ISAS)** GIS database and supporting documentation provides the most comprehensive source for archival background information on archaeological resources. The ISAS conducts multiple-scale field and laboratory research projects that concentrate on interpreting the archaeological heritage of Illinois. Data sources include the Illinois Department of Transportation Historic Bridge Survey and the Cultural Resource Management Archaeological Report Archive, as well as more detailed supporting information including archeological survey data.

This background research included review of artifacts collected by amateur archaeologists Albert Scharf, Oscar Biedes, and Ed Lace, as well as professional investigations completed by the Illinois State Archaeological Survey.

No known archaeological resources were identified within the project APE.

Section 4

Eligible Historic and Archaeological Resources

4.1 Historic Resources

4.1.1 NRHP-Eligible Resources

Figure 4-1 is a map of the APE and the seven identified NRHP-eligible resources. No properties or districts currently listed on the NRHP are present in the APE. **Table 4-1** summarizes historic resources within the APE. The following subsections provide further details on these historic properties. **Attachment 2** provides inventory sheets for NRHP-eligible properties.

Table 4-1: NRHP-Eligible Resources in the Area of Potential Effects

ID	Address	Description	NRHP Eligibility Criteria	Community Area
1	444 W. 100th Place	Eclectic Neo-Traditional Home (built 1930)	Criterion C	Washington Heights
2	324 W. 104th Street	Fire Department Engine Company 93 (built 1917)	Criterion C	Roseland
3	351 W. 104th Street	Roseland Pumping Station (built 1911)	Criterion C	Roseland
4	10920 S. Princeton Avenue	Romanesque Revival-Style Church (built 1916)	Criteria A and C	Roseland
5	11321 S. Wentworth Avenue	Roseland Community Hospital Nurses Home (built 1930s)	Criterion A	Roseland
6	133-139 E. Kensington Avenue	Former Venetian Hall (built 1925)	Criterion A	Riverdale
7	Multiple (Public Housing Project)	Altgeld Gardens Historic District (built 1945)	Criterion A	Riverdale

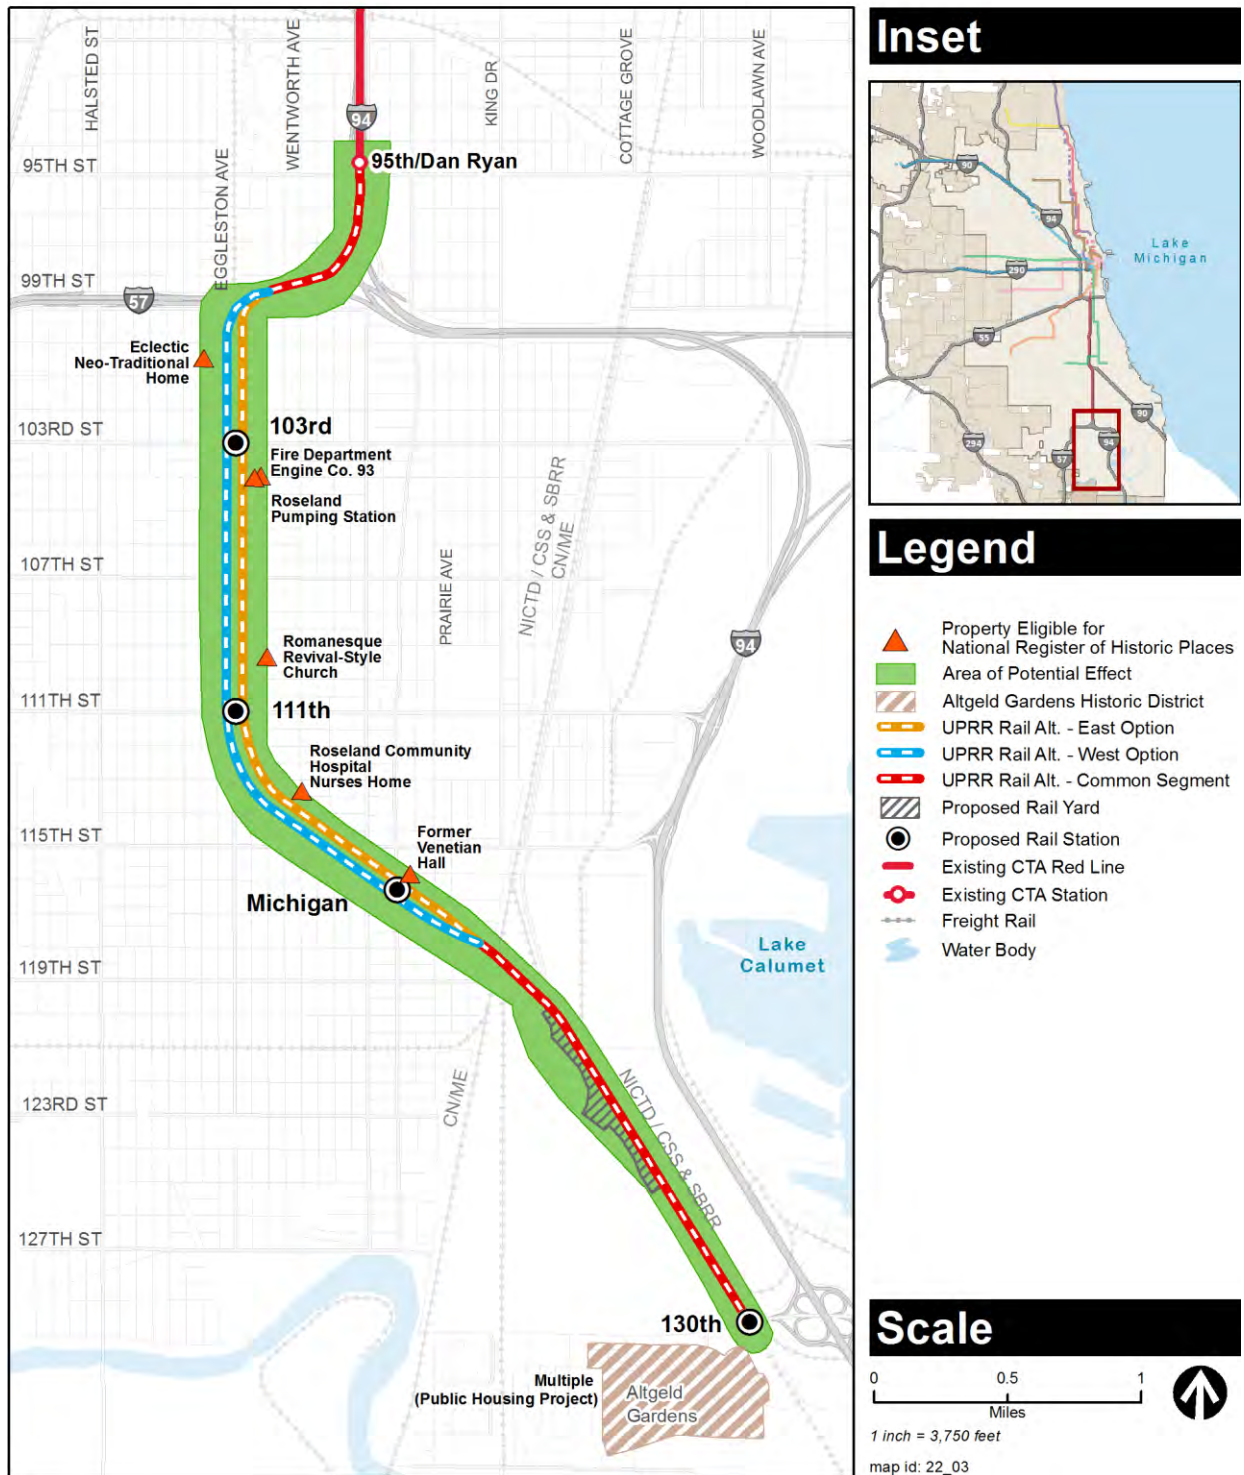

Figure 4-1: NRHP-Eligible Resources in the Area of Potential Effects

Eclectic Neo-Traditional Home, 444 W. 100th Place

This one-story home in the Washington Heights community area rests on a raised basement as shown in **Figure 4-2**. Built in 1930, it is clad with polychromatic brick and has a side gabled roof covered with asphalt shingles. Its front elevation has a gabled living room bay pavilion with paired basement windows, a group of three non-original one-over-one windows with concrete sills, brick arch lintels, colonettes with acanthus leaf capitals, and a small round-arched window in the gable. The house has a recessed corner porch with a metal storm door, round-arch openings, a Neo-Gothic castellated top, concrete steps, and brick sidewalls. The integrity of its materials and detailing is very good. Its Eclectic Neo-Traditional ornamentation makes it stand out among the vernacular, stripped-down brick and frame bungalows and cottages that comprise the predominant building stock in the Washington Heights community area. As a result, it was identified as individually eligible for NRHP listing under Criterion C for its architecture.

Figure 4-2: South Facade of the Eclectic Neo-Traditional Home at 444 W. 100th Place

Fire Department Engine Company 93, 324 W. 104th Street

This two-story firehouse in the Roseland community area is clad with light brown face brick, as shown in **Figure 4-3**. The building has a flat roof and a parapet with concrete coping. The front elevation has a two-story projecting pavilion, an overhead garage door, two window openings, an off-center, hollow-core metal door on the first floor, and a strip of three windows and a single window on the second floor. All windows are non-original, one-over-one aluminum sash. The spandrel area between the garage door and the windows above features a large stone sign plate inscribed with the words, “City of Chicago Fire Department.” The spandrel area between the corner door and window above has a metal plate identifying the 1917 construction date and the names of a series of people associated with the building’s construction, including the mayor, alderman, city architect (Charles W. Kallal), and contractor (Butler & Co.). Detailing includes stone door and window surrounds on the first floor, bracketed stone window lintels, concrete belt courses, and brick pilasters topped by stone panels with the City of Chicago’s “Y” emblem and decorative scrolls. The “Y” emblem is also repeated above the off-center door.

This building is eligible for individual listing on the NRHP under Criterion C for architecture. It is a rare extant example of an early 20th century neighborhood firehouse in Roseland, has largely retained its original building materials and detailing, and still functions as a firehouse.

Figure 4-3: South Facade of Chicago Fire Department Engine Company 93

Roseland Pumping Station, 351 W. 104th Street

The two-story Prairie style Roseland Pumping Station, designed by architect William G. Kreig in 1911, is clad in brown brick, as shown in **Figure 4-4**. The building has a high limestone water table, a flat roof, parapet, and two square towers at the corners of the front elevation. The front elevation features a projecting, two-story, flat roofed entrance pavilion with a pair of centrally located glass double doors, sidelights, and a stone panel above that features the City of Chicago's "Y" emblem in metal. The entrance has a smooth stone surround. Above the entrance is a limestone panel incised with the words "City of Chicago Roseland Pumping Station." Detailing on the entrance pavilion includes brick pilasters with stone bases and coping and geometric motifs. The parapet is clad in limestone and features decorative geometric motifs. The building's fenestration is largely composed of multi-paned, steel-sash windows, some of which have transoms.

This is an excellent intact example of a neighborhood pumping station with fine integrity that still functions in its original use. It was identified as individually eligible for the NRHP under Criterion C for architecture, as it stands as an excellent, well-preserved example of a neighborhood pumping station designed in the Prairie style.

Figure 4-4: North Facade of the City of Chicago Roseland Pumping Station

Romanesque Revival Style Church, 10920 S. Princeton Avenue

This circa 1916 Romanesque Revival style church in the Roseland community area has a front elevation and two flanking towers clad with brown face brick, while the remainder of the side elevation and the rear elevation are clad with common brick. Shown in **Figure 4-5**, the church has a gable roof covered with asphalt shingles and gable wall dormers with shaped parapets on both side elevations. The east tower has a flat roof and a shaped parapet while the west tower has a peaked roof with overhanging eaves and exposed rafters and is topped by a finial. The central bay of the front elevation has a broad, round-arched entrance with a stone surround and two sets of single-light oak double doors. A strip of double-hung windows is within a broad arch and there is a rose window with tracery. Windows on both towers and along the side elevations include round-arch windows with tracery. It is unknown whether the original stained glass for all of these windows is extant inside the church. Both towers also feature paired casement windows. Window openings at the top of the west tower have been boarded over. Detailing includes stone sills, belt courses, brick pilasters, and keystones. A one-story, brick-clad entrance vestibule is along the rear of the west elevation.

Built as the First Reformed Church of Roseland, this church was identified as individually eligible for NRHP listing under Criterion A for its association with the community's once-dominant Dutch population and under Criterion C as a fine example of a Romanesque Revival style church in Roseland.

Figure 4-5: East and North Facades of Church at 10920 S. Princeton Avenue

Roseland Community Hospital Nurses Home, 11321 S. Wentworth Avenue

Shown in **Figure 4-6**, this four-story building has a flat roof and parapet. Its symmetrical front elevation is clad with brown face brick and has a centrally located entrance with a glass door and stone surround topped by two stone owls holding books. Windows are non-original one-over-one aluminum sash; those directly above the entrance have stone casings. Detailing includes stone sills, coping, insert blocks, sill courses, cornice, panels, and pinnacles at the parapet level.

This building is locally significant and eligible for NRHP listing under Criterion A for Education. Formerly the Roseland Community Hospital Nurses Home, it was built by the hospital as a dormitory and educational facility for its nurses. Closely affiliated with Roseland Community Hospital, which has served as an important institution in the Roseland area since its establishment in 1924, the Nurses Home is an excellent example of this building type on Chicago's South Side. The exterior of the building has very good integrity and the interior—which now functions as a homeless shelter—appears to retain classrooms and other spaces associated with its original use.

Figure 4-6: Front Facade of Nurses Home at 11321 S. Wentworth Avenue

Venetian Hall, 133-139 E. Kensington Avenue

The two-story performance hall was built for cultural and recreational purposes, although it has long since been repurposed as a church. The 1938 Sanborn map shows the hall with a stage, balcony, and place for storage of scenery. The street entrance was flanked by two storefronts in 1938, as it is today.

Shown in **Figure 4-7**, the 1925 building is clad with face brick on its front elevation and common brick on its side and rear elevations. The building has a flat roof and a shaped parapet with concrete coping. The first floor of the front elevation has a recessed, centrally located bay with three pairs of multi-light wood doors and in-filled transoms. This central bay is flanked by two original storefronts with central recessed doors and flanking display windows that are covered with wood and topped by transoms that have been filled in with glass block. Separating the central bay from the two flanking storefronts and providing access to the second floor are two doors with transoms. The spandrel area directly above the central entrance bay has a concrete sign plate with incised lettering that reads “Venetian Hall.” Fenestration on the second floor features six-over-one and three-over-one wood-sash windows arranged in pairs and in groups of three, topped by round-arch stone lintels with rosette motifs. The parapet features a series of Classical shields and swags.

Figure 4-7: Front Facade of Venetian Hall

The exterior of this building has good overall integrity, although elements of the original storefront materials are no longer extant. It does not display sufficient distinguishing architectural features to qualify as individually eligible for listing on the NRHP for its architecture. Instead, it is recommended for individual listing under Criterion A for its original

use as a social venue for area residents in the early 20th century. Local theater houses such as the Venetian Hall were jewels within the local communities. It is rare to see an early 20th century neighborhood social hall that retains its original storefronts and is set within a residential area of workers' housing, rather than along a commercial thoroughfare. The opening of Illinois Terra Cotta Works in the first half of the 20th century brought Italians to Kensington; the area gradually became a center of South Side Italian-American life with the establishment of Venetian Hall and the nearby San Antonio de Padua (patron saint of Venice) Roman Catholic Church.

Altgeld Gardens Historic District

This large public housing project was built between 1943–1945 and is shown in **Figure 4-8**. Designed by architects Naess & Murphy, it was originally comprised of 1,498 units located on over 190 acres. Altgeld Gardens is mainly comprised of two-story buildings that are topped with side gable roofs covered in asphalt shingles. The buildings are clad in brick with stepped parapet walls along the gable elevations. A series of single entry doors are located on the front facade. A combination of original and replacement windows are found throughout the complex. Groups of seven units are clustered around central courtyards.

This resource was determined eligible as a district in 1992 by IHPA under Criterion A for its association with community development, planning, and social history.

Figure 4-8: Photo of Altgeld Gardens

4.1.2 CHRS Orange-Rated Properties

Beyond the NRHP-eligible resources, four properties within the APE are identified as notable “Orange” in the CHRS, three of which have also been identified as NRHP-eligible:

- Fire Department Engine Company 93 at 324 W. 104th Street (NRHP-eligible, ID #3)
- Roseland Pumping Station at 351 W. 104th Street (NRHP-eligible, ID #4)
- Romanesque Revival-style church at 10920 S. Princeton Avenue (NRHP-eligible, ID #5)
- St. Salomea Church at 11800–11808 S. Indiana Avenue

These CHRS “Orange”-rated resources are protected by the City’s 2003 Demolition-Delay Ordinance. As none of the CHRS “Orange”-rated resources are proposed for demolition under either the East or West Option, this ordinance is not discussed further.

4.2 Archaeological Resources

A records search was conducted by cultural resource specialists and no known archaeological sites exist within the APE. Although the landscape through which the transit lines would pass is developed, additional archaeological sites may remain undiscovered within protected locations such as parks and gardens. Once the project design has been further refined and before the Final EIS is published, archaeological investigations will occur within areas of ground disturbance for the selected option to determine whether potential resources are present. These investigations will follow the guidelines issued by the State of Illinois.

Section 5

Effects Determinations and Mitigation

5.1 Effect Analysis Thresholds

The NHPA establishes qualitative criteria that define whether a historic property would be subject to an adverse effect: when a project “may alter, directly or indirectly, any of the characteristics of a historic property that qualify the property for inclusion in the National Register in a manner that would diminish the integrity of the property's location, design, setting, materials, workmanship, feeling, or association” (36 CFR 800.5.a). Based on this regulatory framework, an adverse effect finding will be applied to any historic property that would be subject to one or more of the following (36 CFR 800.5.a.2):

- Physical destruction or damage to all or part of the archaeological resource or historic property
- Alteration that is inconsistent with the Secretary of the Interior's *Standards for the Treatment of Historic Properties*
- Removal of the property from its historic location
- Introduction of visual, atmospheric, or audible elements that diminish the integrity of the property's significant features
- Change to the character of the property's use or the physical features within the property's setting that contribute to its significance
- Neglect of a property that causes deterioration
- Transfer, lease, or sale of property out of federal ownership or control without adequate and legally enforceable restrictions or conditions to ensure long-term preservation

Effects can be direct, indirect, or cumulative. If an adverse effect is found, the Federal Transit Administration (FTA) would consult with the Illinois Historic Preservation Agency (the SHPO for Illinois) and other interested parties to develop and evaluate alternatives or modifications to the undertaking that could avoid, minimize, or mitigate adverse effects on the resource (36 CFR 800.6.a).

Effects determinations from the No Build and Build Alternative are provided below.

5.2 No Build Alternative

No adverse effects on historic and cultural resources would result from implementation of the No Build Alternative; therefore, no mitigation measures would be required.

5.3 Build Alternative - UPRR Alternative

Table 5-1 summarizes the effects findings for each historic resource in the APE for both the East and West Options.

Table 5-1: NRHP-Eligible Resources in the Area of Potential Effects - Union Pacific Railroad Alternative East and West Options

ID	Description	Union Pacific Railroad Alternative East Option Effects Finding	Union Pacific Railroad Alternative West Option Effects Finding
1	Eclectic Neo-Traditional Home	No Historic Properties Affected	No Historic Properties Affected
2	Fire Department Engine Company 93	No Historic Properties Affected	No Historic Properties Affected
3	Roseland Pumping Station	No Adverse Effect	No Historic Properties Affected
4	Romanesque Revival-Style Church	No Historic Properties Affected	No Historic Properties Affected
5	Roseland Community Hospital Nurses Home	No Historic Properties Affected	No Historic Properties Affected
6	Former Venetian Hall	No Historic Properties Affected	No Historic Properties Affected
7	Altgeld Gardens Historic District	No Historic Properties Affected	No Historic Properties Affected

NRHP = National Register of Historic Places

5.3.1 East Option

The East Option would cause displacements and visual, noise, and other environmental effects within the APE, but none of these effects would alter the characteristics that qualify any of the identified historic resources for inclusion on the NRHP. No mitigation measures would be required. Because none of the NRHP-eligible resources in the APE would be directly affected (they would not be displaced), each resource was evaluated for potential visual effects from the aerial structure, stations, and parking facilities.

Figure 5-1 is a photo simulation of the East Option track structure adjacent to the Roseland Pumping Station. Although the track structure would be approximately 9 feet west of the Roseland Pumping Station at its nearest point, the East Option is anticipated to have no adverse effect. The pumping station would not be displaced or directly affected by the UPRR Alternative. The resource was recommended eligible under Criterion C for its architecture as an excellent example of a well-preserved community pumping station designed in the Prairie Style that still functions in its original use. The building retains much of its original design, materials, and workmanship, including its projecting two-story flat-roofed entrance pavilion with geometric limestone details and coping. The proposed project would not affect these characteristics and would preserve the property's entrance approach. The changes in setting and feeling brought on by the proposed project would not detract from the architectural aspects of the building that qualify the resource as eligible for NRHP listing. Pile-driving activities would be avoided in the vicinity of the pumping station.

Figure 5-1: Photo of Existing Conditions and Photo Simulation of the Union Pacific Railroad Alternative East Option Elevated Track Structure adjacent to the Roseland Pumping Station, Facing South on Harvard Avenue

The 130th Street station would be approximately 800 feet from Altgeld Gardens Historic District at its closest point and the parking garage at the 130th Street station would be located at a distance away from Altgeld Gardens where the size of the structure would not create a visual impact; therefore, the 130th Street station and parking garage would not affect the Altgeld Gardens Historic District. **Figure 5-2** shows a view of the 130th Street station and parking structure from Altgeld Gardens.

Figure 5-2: Photo of Existing Conditions and Photo Simulation of the 130th Street Station and Parking Garage, Facing Northeast on 130th Place

5.3.2 West Option

Like the East Option, the West Option would cause displacements and visual, noise, and other environmental effects within the APE, but none of these effects would alter the characteristics that qualify any of the identified historic resources for inclusion on the NRHP. No mitigation measures would be required.

Section 6

Consultation Process

In accordance with requirements for consultation established in Section 106 of the NHPA, three distinct rounds of coordination occurred during the RLE Project: initiation activities, identification of historic properties, and assessment of effects. Because there would be no adverse effects as a result of this project, no additional coordination for resolution of adverse effects was needed. Each outreach effort is described in the following sections. **Attachment 3** contains copies of meeting notes from each of these meetings, comments received from consulting parties, and responses to comments.

6.1 Initiation Activities

6.1.1 Invitations to Participate

In August 2012, FTA sent invitation letters to 11 Native American tribes to inform them of the process and request assistance in identifying areas with potential cultural and/or religious significance. Also in August 2012, CTA sent invitation letters to 19 state and local preservation interest groups to inform them of the project and invite them to participate in the upcoming consultation process. FTA and CTA sent invitation letters to the following recipients:

Native American Tribes

- Ho-Chunk Nation
- Miami Tribe of Oklahoma
- Peoria Tribe of Indians of Oklahoma
- Sac and Fox Nation of Oklahoma
- Pokagon Band of Potawatomi Indians
- Prairie Band of the Potawatomi Nation
- Citizen Potawatomi Nation
- Forest County Potawatomi Nation
- Potawatomi Nation
- Sac and Fox Nation of Mississippi in Iowa
- Sac and Fox Nation of Missouri

State and Local Preservation Groups

- SHPO
- Advisory Council on Historic Preservation
- Illinois State Museum
- Illinois State Archaeological Survey
- City of Chicago Department of Planning and Development's Historic Preservation Division
- Preservation Chicago
- Landmarks Illinois
- Chicago Historical Society
- Ridge Historical Society
- Beverly Area Planning Association
- East Beverly Association
- Rosemoor Community Association
- Cottage Grove Cottage Grove Heights Community Coalition
- Historic Pullman Foundation
- South Suburban Genealogical and Historical Society
- Chicago Neighborhood Initiatives
- Neighborhood Housing Services of Chicago
- Mercy Housing Lakefront
- Friends of the Parks

At present, 11 groups are participating in the process. The consulting parties include the SHPO, the City of Chicago Department of Planning and Development's Historic Preservation Division, Preservation Chicago, Landmarks Illinois, the Ridge Historical Society, the Rosemoor Community Association, Friends of the Parks, Chicago Neighborhood Initiatives, Neighborhood Housing Services of Chicago, DCP, and the Chicago Park District.

6.1.2 Section 106 Kickoff Webinar

On October 24, 2012, FTA and CTA held a webinar on RLE historic properties to introduce the project and initiate the consultation process. During the eligibility phase of consultation, properties and districts that were identified as eligible for listing on the NRHP were discussed. Properties over 50 years old in the APE were evaluated to determine whether they are NRHP-eligible under one of the four National Park Service Criteria for Evaluation.

6.2 Identification of Historic Properties

FTA and CTA provided draft materials on the identification of NRHP-eligible properties to consulting parties on January 4, 2013, in compliance with Section 106 of the NHPA. A 30-day comment period followed, with an in-person meeting on January 30, 2013 to facilitate discussion among consulting parties. The meeting was followed by an informal tour of the corridor that afternoon. As part of this phase of coordination, CTA received written comments from six consulting parties.

Comments received from consulting parties in regards to eligibility focused on requesting additional surveys of resources, potential districts that should be considered recommended as eligible, reconsideration of surveyed properties and their eligibility, and the importance of looking at resources in the historical/social context.

As part of the eligibility phase, CTA surveyed 541 potentially eligible resources within the APEs for all alternatives being studied at the time (BRT, UPRR, and Halsted Alternatives). As a result of the field investigations and comments received from consulting parties on potentially eligible resources, for all alternatives, 15 total resources were identified as eligible for inclusion on the NRHP, including 13 individual buildings and 2 historic districts.

Specifically for the UPRR Alternative, CTA surveyed 280 potentially eligible resources within the UPRR Alternative APE. As a result of the field investigations and comments received from consulting parties on potentially eligible resources, for the UPRR Alternative, 7 total resources were identified as eligible for inclusion on the NRHP, including 6 individual buildings and 1 historic district.

6.3 Assessment of Effects

FTA and CTA mailed a Draft Effects Report to consulting parties on April 18, 2014, requesting any written comments by May 23, 2014. On May 8, 2014, FTA and CTA met with consulting parties to discuss potential project effects on NRHP-eligible historic properties. CTA received written comments from four consulting parties.

Comments received from consulting parties in regards to assessments of effect included eligibility reconsiderations, effects reconsiderations, and requests for renderings for properties in the APE. Comments also related to effects associated with the Halsted Alternative and 130th Street West Station Option, both of which have been eliminated from further consideration.

As discussed above in Section 2, in August 2014, based on the technical analysis and public input, CTA announced the NEPA Preferred Alternative—the UPRR Alternative. Additional conceptual engineering was conducted on the UPRR Alternative to refine the East and West Option alignments. In addition, CTA is now considering only the South Station Option of the 130th Street Station. Further details on the alternatives evaluated and eliminated through the Draft EIS process are provided in **Attachment 1**.

CTA provided responses to all consulting party comments received in May 2014 on November 23, 2014. Responses noted that the alternatives had been further narrowed and that the UPRR Alternative (East and West Options) were proposed to move forward as the NEPA Preferred Alternative. The consulting parties requested renderings at the Roseland Pumping Station and the 130th Street station near Altgeld Gardens, which are included in the Draft EIS.

6.4 Resolution of Adverse Effects

Based on the assessment of effects and review of consulting party comments, CTA recommends that no adverse effects on historic resources would occur because of the RLE Project (East or West

Option); no mitigation measures would be required and therefore consultation with consulting parties is complete. Coordination with the SHPO will continue through the remainder of the project.

Attachment 1

Alternatives Development Process

CTA began developing the alternatives studied in the Draft EIS during the Alternatives Analysis (AA), which took place during 2006–2009. Starting with multiple modes and corridor options, CTA developed and screened alternatives through a combination of conceptual engineering, public input (open house and stakeholder meetings), and preliminary analysis of potential impacts and costs. A three-level, detailed screening process was used to evaluate the alternatives and identify an LPA. The [LPA Report](#) provides detailed documentation of the Screen 1, Screen 2, and Screen 3 evaluations.

The Screen 1 evaluation began by identifying the universe of alternatives, which included a wide range of transit modes (such as bus, rail, or streetcar), project area corridors, and profiles (where the transit line is in relation to the ground). Combinations of 11 modes, 9 corridors, and 4 profiles were evaluated against the purpose and need. Based on this evaluation, the following alternatives were carried forward for further analysis in Screen 2: two bus rapid transit (BRT) alternatives along Halsted Street and Michigan Avenue; six heavy rail transit (HRT) alternatives along Halsted Street, the Union Pacific Railroad (UPRR), and Michigan Avenue; the No Build Alternative; and a “low cost” alternative (formerly required for FTA analyses known as the Transportation System Management [TSM] Alternative).

The alternatives carried through to the Screen 2 evaluation were more thoroughly defined to include mapping of a more defined alignment, identification of potential station locations, and preliminary service plans. Station spacing was determined by the type of alternative proposed, project area needs, and consistency with the purpose and need. The eight evaluation factors for the Screen 2 included a mix of qualitative and quantitative factors intended to further evaluate the performance of each alternative with respect to the project goals and objectives. Specific evaluation factors included physical constraints; right-of-way requirements; social and economic factors; demographics and employment; environmental factors; noise, visual, natural, and cultural resource impacts; transportation factors; and travel time, transit connectivity, and traffic.

Based on the results of the Screen 2 evaluation, a BRT alternative along Halsted Street (operating on dedicated lanes), two HRT alternatives along Halsted Street and the UPRR, the No Build Alternative, and the TSM Alternative were recommended for further evaluation in Screen 3. In addition to the alternatives carried forward from the Screen 2 evaluation and based on discussions with FTA, CTA combined the TSM Alternative with a BRT alternative (operating on existing right-of-way rather than dedicated lanes as proposed in Screen 2) along Michigan Avenue to form a single alternative (called the BRT Alternative) for evaluation in Screen 3. Because the Michigan Avenue BRT Alternative would operate in the existing right-of-way, it would require fewer property acquisitions than BRT on dedicated lanes. Screen 3 was a two-step evaluation process that included the further definition and refinement of alternatives, including conceptual design and the evaluation of these alternatives. Nine evaluation factors were used to evaluate the alternatives as part of Screen 3, including physical constraints, public support, social and

economic factors, environmental factors, transportation factors, capital cost comparison, operating and maintenance cost comparison, ridership potential, and FTA's Cost Effectiveness Index. The result of the Screen 3 evaluation was a recommendation for the LPA: the UPRR Alternative.

Based on the results of the AA and considerable public support for the corridor, including a 2004 referendum where 38,000 residents in the 9th and 34th Wards supported the UPRR corridor for the RLE Project, the UPRR Alternative was recommended as the LPA, indicating that it is the alternative that would best meet the purpose and need of the project while addressing potential impacts and other potential constraints. The UPRR Alternative would provide access to the most densely populated portions of the study area, which are primarily residential and transit supportive. The Chicago Transit Board designated the UPRR Alternative as the LPA on August 12, 2009. **Figure 1** summarizes the AA process.

¹The Chicago Transit Board designated the UPRR Rail Alternative as the Locally Preferred Alternative on August 12, 2009.

²This Draft EIS presents impacts of the No Build Alternative and two options of the UPRR Rail Alternative: the East Option and the West Option.

EIS = Environmental Impact Statement, UPRR = Union Pacific Railroad

Figure 1: Alternatives Development Summary

After the AA, CTA further refined the alternatives for presentation during the NEPA scoping process and study in the Draft EIS. At the conclusion of the AA process, the UPRR Alternative was anticipated to be located adjacent to the east or west edge of the UPRR right-of-way. In 2012, CTA learned of a Chicago Department of Transportation (CDOT) feasibility study looking at moving UPRR freight operations out of the existing UPRR corridor before the RLE Project. By moving UPRR freight operations out of the existing UPRR corridor, CTA could use the existing UPRR right-of-way for the RLE Project. CTA evaluated this new option of the UPRR Alternative, known as the Right-of-Way Option, in preparation of the Draft EIS. Subsequent coordination between local agencies and the railroads indicated that relocating UPRR freight operations from this corridor presents considerable challenges and would not be feasible.

During 2012–2014, CTA evaluated benefits and impacts of four alternatives: the No Build Alternative, the BRT Alternative (along Michigan Avenue), the UPRR Alternative, and the Halsted Alternative. CTA evaluated three options for the UPRR Alternative: the Right-of-Way Option, East Option, and West Option. CTA also evaluated two options for the UPRR Alternative 130th Street station: a South Station Option and a West Station Option.

In August 2014, based on the technical analysis and public input until then, CTA announced the NEPA Preferred Alternative—the UPRR Alternative. Because the Right-of-Way Option is not feasible, the Draft EIS evaluates only the East and West Options for the UPRR Alternative. CTA has chosen to move forward with the South Station Option at 130th Street based on technical analysis and public feedback. Additional information about the BRT Alternative, UPRR Right-of-Way Option, UPRR West Station Option for the 130th Street station, and Halsted Alternative is presented below in the discussion of alternatives considered but not pursued.

Alternatives Considered but Not Pursued

During development of the project, CTA fully evaluated the BRT Alternative, the Right-of-Way Option for the UPRR Alternative, and the Halsted Rail Alternative (Halsted Alternative). In addition, CTA fully evaluated a West Station Option for the 130th Street station. These alternatives and the station option were analyzed as part of the technical memoranda preparation for the Draft EIS, but are not included in the Draft EIS. They were eliminated from analysis based on public input, technical constraints, potential impacts, and the extent to which they met the project's purpose and need.

CTA also evaluated a variation of the UPRR Alternative where the tracks would be at grade rather than elevated, described below.

Bus Rapid Transit Alternative

CTA considered a BRT Alternative along Michigan Avenue between 95th Street Terminal and Altgeld Gardens. This limited-stop enhanced bus route along the existing #34 South Michigan Avenue bus route would have transit signal priority along Michigan Avenue. The alternative included four stops, each with park & ride facilities. Although the BRT Alternative was a lower-cost alternative than the UPRR Alternative, it was eliminated in August 2014 based on public feedback including the following concerns:

- The BRT Alternative would have minimal travel time improvements compared to the No Build Alternative (23 minutes from 130th Street to 95th Street under the BRT Alternative, compared to 28 minutes for existing conditions or 14 minutes for the UPRR Alternative over the same distance).
- Approximately 1 million riders per year were anticipated for the BRT Alternative (in comparison to 13 million riders per year anticipated for the UPRR Alternative).
- The BRT buses would not have traveled on a dedicated lane along Michigan Avenue because of limited right-of-way. Although transit signal priority was planned, additional travel time savings would not have been realized without dedicated lanes for BRT buses.

Union Pacific Railroad Alternative

The Draft EIS summarizes the benefits and impacts of the East and West Options. In preparation of the Draft EIS, CTA fully evaluated the Right-of-Way Option and the 130th Street Station West Station Option. CTA also considered an at-grade (rather than elevated) track structure for the UPRR Alternative.

Right-of-Way Option

As part of the UPRR Right-of-Way Option, the elevated CTA structure would have been placed in the UPRR right-of-way. This option was added in 2012 in response to the CDOT feasibility study looking at moving UPRR freight operations out of the existing UPRR corridor before the RLE Project. The Right-of-Way Option would only be feasible if the separate project were implemented before implementation of the RLE Project. Coordination between local agencies and the railroads indicated that relocation of UPRR freight operations from this corridor presents considerable challenges; therefore, this option is no longer feasible. Estimated travel times and ridership were the same for the Right-of-Way Option as for the East and West Options. Because the elevated CTA structure would have been placed in the UPRR right-of-way, the Right-of-Way Option would have resulted in fewer displaced properties than either the East or West Option.

130th Street Station - West Station Option

CTA initially considered two options for the 130th Street station: a South Station Option and a West Station Option. The South Station Option would be located immediately west of the

Northern Indiana Commuter Transportation District/Chicago South Shore & South Bend Railroad (NICTD/CSS & SBRR) right-of-way at 130th Street. The West Station Option would be located along the north side of 130th Street at Evans Avenue. Pedestrians from Altgeld Gardens would access the West Station Option through a pedestrian crosswalk on 130th Street. A traffic signal would be required at this intersection to allow pedestrians to safely cross 130th Street.

The South Station Option is supported by the community and the Chicago Housing Authority because it would be more accessible from Altgeld Gardens. The West Station Option would incur additional costs because it would require approximately 1,100 feet of additional track due to its location, and would require intersection improvements to allow pedestrians to safely cross the street. The South Station Option would provide the best opportunity for a future connection to NICTD, improving regional rail connections and linkages to other modes of public transportation. Based on public feedback and technical analysis, CTA is considering only the South Station Option for 130th Street station.

At-Grade Track Structure

CTA considered a variation of the UPRR Alternative in which the RLE tracks would run at grade along the UPRR rail corridor (between I-57 and Prairie Avenue). In this variation, the existing east-west roadways would run either above or below the new at-grade CTA tracks and the existing at-grade UPRR tracks. Like the proposed UPRR Alternative, this variation would be elevated from the 95th Street Terminal to south of I-57, then at grade from I-57 to Prairie Avenue, elevated to cross the Canadian National/Metra Electric District (CN/ME) tracks near 119th Street, then at grade near the proposed yard and shop and 130th Street station. CTA evaluated potential impacts and cost implications to run the east-west roadways both above (using overpasses) and below (using underpasses) the at-grade UPRR tracks and the proposed at-grade CTA tracks.

Roadway Overpasses

For an at-grade track structure, one option would be to use overpasses to carry roadways over the tracks. If roadway overpasses were used, they would need to be constructed at eight locations. More than 100 properties (primarily residential homes) would be displaced due to the overpass footprint, elimination of access to existing alleyways or driveways, and proximity of the embankment structure to the residential homes. The overpass structure and associated embankment could be as high as 30 feet, creating a substantial visual impact on the adjacent one-story residential buildings. In addition, permanent north-south residential street closures would be required where the streets would intersect with the embankment, which would disrupt neighborhood connectivity. Utilities that currently run within the street rights-of-way would have to be relocated. The potential construction cost savings between the elevated track structure and the at-grade structure would be insignificant when the cost of additional right-of-way acquisition and utility relocations is included. Roadway overpasses would also increase community impacts.

Roadway Underpasses

A second option for an at-grade track structure would be to use underpasses to carry roadways under the tracks. If underpasses were used, they would need to be constructed at eight locations. The underpass variation would have property displacements and community impacts similar to

those of the roadway overpass option except a large retaining wall would be located in front of the residential homes. Because the cost of a roadway underpass structure may be as much as double the cost of an overpass structure, this variation would provide no additional cost savings over the elevated track structure alternative and would have significantly more community impacts and right-of-way costs.

Based on the property displacements and community impacts that would be created by grade-separating the roadways from the proposed CTA tracks (through either roadway overpasses or underpasses), CTA eliminated this variation from further consideration.

Halsted Alternative

CTA considered the Halsted Alternative, which would extend the Red Line from 95th Street Terminal along I-57, and south along Halsted Avenue to Vermont Avenue on a new elevated structure. The Halsted Alternative would run above Halsted Avenue with center piers, except at the station locations where the structures would span Halsted Avenue. The Halsted Alternative would result in travel times similar to those of the UPRR Alternative. The alternative included four stations, each with park & ride facilities. Construction costs for the Halsted Alternative were approximately 6 percent higher than for the UPRR Alternative. The Halsted Alternative was eliminated in August 2014 based on technical analysis and public feedback including the following concerns:

- The Halsted Alternative would not have the potential for a direct connection to other regional transit services² like the UPRR Alternative would; therefore, it would not meet the purpose and need for the project.
- The Halsted Alternative would affect four historic resources, resulting in adverse effects on historic properties, while the UPRR Alternative would not affect any historic resources.
- The proposed seven-story parking structure at Vermont Avenue would result in adverse visual impacts because of its location within a neighborhood with single-family homes.
- The Halsted Alternative would not directly serve as many affordable housing locations in the project area as the UPRR Alternative would serve, including Altgeld Gardens.
- The public expressed concern that implementation of the Halsted Alternative would be disruptive to the surrounding community and would increase shadows, crime, and noise along the Halsted Street.

² Although the Halsted Alternative intersects the ME Blue Island branch, the southern terminus of that branch is less than 3 miles from the intersection at Halsted Street and is located just to the west of the project area. The northern terminus of the ME Blue Island branch is only two blocks from the Red Line in the Loop. Intersection with the ME Blue Island branch would not provide regional service.

- The Halsted Alternative did not receive the considerable public support before and during scoping in 2009 that the UPRR Alternative received.

<p>Property Description:</p> <p>This one-story house in the Washington Heights community is clad with polychromatic brick and has a side-gabled roof covered with asphalt shingles. End gable walls are clad in aluminum siding. Its front elevation features a gabled pavilion with a strip of three non-original one-over-one aluminum-sash windows and a gabled entrance vestibule featuring a wood door with diamond pane window, concrete steps, and metal railings. A single non-original one-over-one aluminum-sash window is located in the corner of the front elevation. A small ventilating louver is situated in the gable. Detailing includes concrete sills and lintels with keystones. This house does not display distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Prepared By: J. Martinez, M. C. Bird, J. Guarino</p> <p>Photo By: S. Katz</p> <p>Date: 10 October 2012</p>	
<p>Property Description: This one-story house in the Washington Heights community sits on a raised basement. It is clad with polychromatic brick and has a side gabled roof covered with asphalt shingles. Its front elevation has a gabled living room bay pavilion with paired basement windows that appear to be casements. There is a group of three non-original one-over-one windows with concrete sills and brick arch lintels that are separated by colonettes with acanthus leaf capitals. A small round-arched window is located in the gable. The house has a recessed corner porch with a metal storm door, round-arch openings, a Neo-Gothic castellated top, concrete steps, and brick sidewalls. This house has very good integrity in terms of its materials and detailing, and its Eclectic Neo-Traditional ornamentation makes it stand out among the vernacular, stripped-down brick and frame bungalows and cottages that comprise the predominant building stock in the Washington Heights community. As a result, it is recommended as individually eligible for National Register listing under Criterion C for architecture.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This one-story house is situated on a raised basement. It has a rectangular footprint, a hip roof covered with asphalt shingles, and overhanging eaves. Its front façade is clad in buff face brick and has a strip of three windows, which appears to be one large picture window flanked by double-hung windows, beneath a metal awing. The off-center metal core front door is accessed via a flight of concrete steps with metal railings. Two large decorative glass blocks are situated next to the door. The side elevations are clad in common brick. This home does not have distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Prepared By: J. Martinez, M. C. Bird, J. Guairno</p> <p>Photo By: S. Katz</p> <p>Date: 10 October 2012</p>	
<p>Property Description:</p> <p>This one-story house in the Washington Heights community is situated on a raised basement with glass block windows. It is clad with brown brick and has a hip roof covered with asphalt shingles and overhanging eaves. There are hip-on-gable dormers on the front and side elevations, each of which has a strip of non-original one-over-one aluminum-sash windows. The house features a recessed corner porch with a single-light oak door, concrete steps, low brick sidewalls, and a brick corner pier. The front elevation's rounded living room bay has a series of casement windows and transoms. Detailing includes a brickwork soldier course above windows with decorative stone insert blocks and concrete sills. This is a good example of a brick Chicago Style Bungalow, a building type that was produced in the thousands throughout the city's undeveloped areas and in nearby suburbs during the 1910s and 1920s. This house does not feature sufficient distinguishing architectural features to be individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Architectural Style: Craftsman</p>	<p>Stories: 1</p>
<p>Property Description:</p> <p>This one-story Craftsman bungalow is situated at the southwest corner of 103rd Place and Princeton Avenue in the Roseland community. It has a hip-on-gable roof covered with asphalt shingles and overhanging eaves with decorative knee braces located on the front gable section of the roof. The central portion of the house retains its original wood clapboard siding; the areas above and below are clad with wood shingles. Its 103rd Place elevation has a strip of three one-over-one windows, a strip of three casements, and a strip of three windows in the gable that appear to be casements. Its Princeton Street elevation has a metal storm door topped by a gabled hood with two knee braces, glass block basement windows, a strip of three one-over-one windows, a single one-over-one window, and a pair of casements. This house does not have sufficient distinguishing features to qualify as individually eligible for listing on the National Register.</p>

<p>Property Description: The two-story commercial portion of this building is identified as a “Hay, Grain & Feed” shop in the 1905 Sanborn while the one-story portion is identified as used for related storage. The buildings were joined at a later date. Both are clad in brown face brick and have flat roofs and parapets. The two-story section has an off-center entrance with an original wood door, sidelights, transom, and a stone surround with cornice, as well as a metal cornice. The glass panes in the sidelights and door have been removed and their openings in-filled with wood. It has bay windows on the first and second floors and an additional window opening above the entrance bay. All windows are comprised of one-over-one wood-sash. Detailing includes brick banding and a stone cornice. The one-story part has altered door and window openings, including one large window opening that has been in-filled with glass blocks. Side elevations are clad in common brick. This structure lacks architectural distinction and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This two-story frame building in the Washington Heights community has a gable roof covered with asphalt shingles that is obscured by a false front with faux stone siding and high stepped parapet. The first floor has two large window openings that are in-filled with glass block. The second floor has a non-original picture window flanked by one-over-one aluminum-sash windows. The building has a one-story flat-roofed wing. The wing's front elevation is clad with vertically laid wood boards above a brick base. It has a pair of non-original hollow core metal paneled doors with fanlights. The wing also features decorative modern angled wood pylons at its corner and along its side elevation. This building does not feature sufficient integrity to qualify as individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Prepared By: J. Martinez, M. C. Bird, J. Guarino</p> <p>Photo By: Steve Katz, HAARGIS</p> <p>Date: 24 September 2012</p>	<p>Property Description:</p> <p>The two-story Prairie style Roseland Pumping Station is clad in brown brick. It has a high limestone watertable, a flat roof, parapet, and two square towers at the corners of the front (Roseland) elevation. The front elevation features a projecting, two-story flat-roofed entrance pavilion with a pair of centrally located glass double-doors, sidelights, and a stone panel above that features the City of Chicago's "Y" emblem in metal. The entrance has a smooth stone surround. Above the entrance is a limestone panel incised with the words: "City of Chicago Roseland Pumping Station." Detailing on the entrance pavilion includes brick pilasters with stone bases, coping, and geometric motifs. The parapet is clad in limestone and features decorative geometric motifs. The building's fenestration is largely comprised of multi-paned steel sash windows, some of which have transoms.</p> <p>Stories: 2</p> <p>This is an excellent intact example of a community pumping station with fine integrity that still functions in its original use. It is recommended as individually eligible for the National Register under Criterion C for architecture as a well-preserved example of a community pumping station designed in the Prairie style.</p>

<p>Property Description:</p> <p>This two-story building in the Roseland community, a former warehouse later converted to residential use and now abandoned, has a flat roof and shaped parapet with concrete coping. Its front elevation is clad in brown face brick and its side and rear elevations are clad with common brick. The front elevation has an off-center door opening with transom, a garage door opening, and two window openings, all of which are covered with plywood. A portion of one of these window openings is visible and reveals a multi-paned upper sash. The second floor has a pair of window openings and a strip of three window openings, all of which have had their glass panes removed. Detailing includes concrete sills and insert blocks between the first floor openings, two brick soldier courses, and brick stringcourses at the parapet level. This building does not have sufficient integrity or distinguishing architectural features to qualify as individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This one-story, brick-clad house in the Roseland community sits on a raised basement with glass block windows. The building has a hip roof covered with asphalt shingles, overhanging eaves, and a large hip-roofed rear wing. Its projecting gable-roofed front wing has a recessed corner porch with low brick walls, a brick corner pier, concrete steps with metal railings, and a door tucked into the side of the living room bay. Its front elevation features two large picture windows, a glass block window, and a bulls-eye window in the gable. Other windows are non-original double-hung. Detailing includes faux stonework at the corners of the basement, concrete sills, glass blocks, and keystone-like blocks surrounding the bulls-eye window. This house lacks integrity and distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This one-and-a-half-story frame house in the Roseland community is situated on a raised concrete block basement with glass block windows and is covered with synthetic siding. The building has a cross-gable roof covered with asphalt shingles. The front elevation has an off-center door behind a metal storm door, non-original wood steps and railings, and five non-original one-over-one aluminum-sash windows: four on the first floor and one in the gable. Review of the 1938 Sanborn and the assessor's 2007 photograph suggests that while the front and rear porches are original to the house, a second story was added to the residence between 1938 and 2007. This house lacks integrity and distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1.5</p>

Katz, Cook County Assessor</p> <p>Date: 5 September 2012</p>	<p>Property Description:</p> <p>This property includes a two story, flat-roofed concrete block building associated with South Shore Iron Works, manufacturers of structural steel. The building is difficult to see from the public right-of-way. The first floor has one-over-one windows below a metal awning and the second floor has glass block windows. Portion of the building has had its roof raised, creating more height for the interior workspace. The Cook County Assessor's photo shows large sliding metal doors on the warehouse façade. This structure lacks architectural distinction and is not individually eligible for listing on the National Register.</p> <p>Stories: 2</p>

<p>Property Description:</p> <p>This one-story Craftsman style house in the Roseland community is situated on a raised concrete block basement and is covered with synthetic siding and wood shingles. The building has a side hip-on-gable roof, overhanging eaves. There are decorative wood brackets and a hip-on-gable dormer with bracketed, overhanging eaves. There are three double-hung wood-sash windows with aluminum storms in the gable. Asphalt shingles clad the roof and the dormer. The roof has a wide overhang that serves as the roof for a full-width wood porch that has faux stone piers and wood railings, but no steps. The front elevation has a centrally located door that appears to be oak with a glass pane, which is flanked by three windows on either side, all of which are double-hung wood-sash with aluminum storms. This house lacks distinguishing architectural features and is not individually eligible for listing on the National Register.</p>

<p>Property Description:</p> <p>This two-flat greystone residential building in the Roseland community has a flat roof and parapet. Its front elevation features a full-height window bay pavilion with fenestration comprised of one-over-one replacement windows. It has an off-center porch with two entrances that feature non-original wood doors, stone steps, metal and stone railings, and wood columns supporting a flat wood roof with dentil molding. Detailing includes a stone sill courses, lintels, beltcourses, and cornice.</p> <p>Stories: 2</p> <p>The City of Chicago has recognized this building type through its Historic Greystone Initiative, which promotes the preservation of Chicago's ornate, limestone-clad homes by offering technical assistance and financial resources to property owners. Although this is an example of the greystone residential building type, it does not possess sufficient distinguishing architectural characteristics to qualify as individually eligible for listing on the National Register.</p>

<p>Property Description:</p> <p>This one-story house in the Roseland community is situated on a raised concrete block basement with casement windows. The building has original wood clapboard siding and a cross-gambrel roof with asphalt shingles. The roof extends forward to serve as the roof over the full-façade wood porch with supports consisting of faux stone piers topped by wood columns. The front elevation has an off-center wood door and a window covered with plywood on the first floor. There are two one-over-one windows on the second floor. Above the basement, windows are one-over-one, some with aluminum storms. This house lacks distinguishing architectural features and is not individually eligible for listing on the National Register.</p>

<p>Property Description:</p> <p>This two-story, brick-clad, light industrial building in the Roseland community has a flat roof, parapet with coping, and a T-shaped footprint. The front segment of the building was a one-story building erected in 1908. Sometime after 1939, a second story and a rear wing were added. The original segment has an off-center door and the outline of three former window openings (with brick arched lintels and stone sills) that have been in-filled with brick. The second floor and the rear wing have glass block window openings with small ventilating louvers. This building lacks integrity and distinguishing architectural features; it is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

Katz</p> <p>Date: 16 September 2012</p> <p>Property Description:</p> <p>This one-story brick bungalow in the Roseland community is situated on a raised basement with glass block windows and is clad with brown face brick. The building has a hip roof covered with asphalt shingles, a hip dormer with two windows on its front elevation, and a shed dormer with three windows on its west elevation. Both dormers are covered with synthetic siding. The front elevation has a strip of five windows. Windows throughout the house are non-original one-over-one aluminum-sash of varying sizes with the exception of a casement window along the east elevation. The main entrance is situated along the east elevation and consists of a hollow core metal door topped by a bracketed wood gabled hood. Detailing includes brick corner pilasters, concrete sills, and decorative square insert blocks. This house lacks distinctive architectural features and is not individually eligible for listing on the National Register.</p>

Katz</p> <p>Date: 16 September 2012</p>	<p>Property Description:</p> <p>This one-and-a-half-story house in the Roseland community is situated on a raised concrete block basement with glass block windows and is clad with synthetic siding. The building has a gable roof covered with asphalt shingles. The front elevation has a hip-roof, full-width porch with faux stone piers topped by squat squared wood column supports, wood steps and straight wood railings. It also has an off-center entrance with a metal storm door, a strip of three windows on the first floor, and two windows on the second. Windows throughout the house are non-original one-over-one aluminum-sash. The east elevation has a three-sided bay window on the first floor with a gable wall dormer above. This house lacks integrity and distinctive architectural features and is not individually eligible for listing on the National Register.</p> <p>Stories: 1.5</p>

<p>Property Description: This two-story residential building in the Roseland community has a flat roof and crenellated parapet with concrete coping. Its front elevation is clad in brown face brick and its side elevations are clad in common brick. The front elevation features two hollow core metal doors, the outline of a former storefront that has been in-filled with faux stone and two glass block windows, and six three-over-one wood-sash windows on the second floor. The original off-center entrance that provides access to the second floor apartment has a transom that is in-filled with faux stone. Detailing includes a concrete sill course, inset brick panels, and a parapet that features small decorative concrete insert blocks and a centrally located stone panel with shield. This building lacks integrity and does not have sufficient distinguishing architectural features to qualify as individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This two-story Queen Anne style commercial building at the southwest corner of 115th and State streets in the West Pullman community is clad with brick and has a flat roof and parapet. The first floor of both street elevations has been drastically altered by the removal of the corner storefront and the infill of virtually all door, window, and round-arch transom openings with brick. The first floor of the front (115th Street) elevation currently features a single, non-original, off-center hollow core metal door. The first floor of the State Street elevation has a centrally-located non-original hollow core metal door and a single non-original one-over-one aluminum-sash window. The second floor, however, retains its original metal corner turret with conical roof and a three-sided metal window bay on the State Street elevation. Both bays have rectangular panels at their bases and dentil molding, and the turret features decorative pilasters. However, the windows in both the bay and turret are non-original. The second floor of the 115th street elevation has a non-original glass block window and an aluminum-sash window, both of which have stone sills and lintels. The second floor of the State Street elevation has a series of non-original one-over-one aluminum-sash windows with rounded transoms that have been in-filled with brick. This building lacks integrity and is not</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This two-flat residential building in the Roseland community is situated on a raised basement and is clad with rusticated limestone on its front elevation and common brick along its side and rear elevations. The building has a flat roof and parapet. Its front elevation has a full-height three-sided window bay pavilion, a partial-width stone porch with Corinthian columns and balustrade, and an off-center entrance with metal storm door. There is a secondary entrance to the lower level. The first floor window bay has a non-original central fixed-pane window with multiple lights and flanking nine-over-one windows. The second floor of the front elevation has four non-original one-over-one aluminum-sash windows—three on the bay and one above the entrance. Casement windows provide light to the basement. Detailing includes smooth stone sill courses, belt courses, and a cornice with dentil molding.</p> <p>Stories: 2</p> <p>This is an example of a greystone, a building type that the City of Chicago has recognized through its Historic Greystone Initiative. However, there are thousands of greystone residential buildings in Chicago and this particular example does not stand out among the city's stock of this residential building type. As a result, it does not qualify as</p>

<p>Property Description:</p> <p>This two-story house in the West Pullman community is situated on a raised concrete block basement, is clad with synthetic siding, and has cornice returns and a cross-gable roof covered with asphalt shingles. It front elevation features a full-width, flat roof, wood porch with non-original slat railing, thin wood posts, and an off-center door. There is a three-sided bay with one-over-one double-hung windows on the first floor and a strip of three single-pane windows on the second floor that may be sliding glass. This house lacks sufficient integrity or distinguishing architectural features to qualify as individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This two-and-a-half-story frame house in the West Pullman community is clad in rusticated concrete block on the first floor and in synthetic siding above. The building has a front gable roof with asphalt shingles. It has a two-story full-width, hip-roof wood porch/balcony with faux stone piers and wood posts as supports on the first and second floors, respectively. A non-original stairway leads to the second floor balcony. Both first and second floors have off-center non-original hollow core metal doors. Windows on the front elevation are non-original and include one on the first floor that is obscured by the staircase, a picture window flanked by one-over-one aluminum-sash windows on the second floor, and a single one-over-one aluminum-sash window in the gable. This house lacks integrity and distinctive architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2.5</p>

<p>Property Description:</p> <p>This one-story cottage in the West Pullman community is situated on a raised brick basement and has a hip-on-gable roof covered with asphalt shingles. Its front elevation is clad with brown face brick and has a central hollow core metal door flanked by a pair of one-over-one aluminum sash windows on one side and a strip of three casement windows on the other. The gable has a pair of one-over-one aluminum-sash windows. This elevation also has side-facing concrete steps faced with faux stone and metal railings. Detailing includes brick pilasters flanking the door, concrete sills, flat arch window lintels with square stone inserts, and a lintel above the door that reads: "FAM.TOVALIN.E.322." This house lacks distinctive architectural features and is not individually eligible for listing on the National Register.</p>

<p>Property Description:</p> <p>This one-story frame cottage in the West Pullman community is situated on a raised basement and is covered with stucco. The building has a front gable roof covered with asphalt shingles and a gable dormer along its south elevation. It has a partial-width flat-roofed porch that appears to be concrete, with solid sidewalls, straight posts, and a stepped parapet. Its front elevation has an off-center non-original hollow core metal door and a three-sided window bay with single-pane window and transom in the center flanked by one-over-one aluminum-sash windows. There is a pair of sliding aluminum-sash windows in the gable with a lunette fixed-pane window above. Windows are modern replacements. While the stucco cladding is somewhat unusual for this community's housing stock, this particular house lacks integrity as well as architectural features that are distinctive enough to merit individual inclusion on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This two-story cottage in the Washington Heights community has a gable roof covered with asphalt shingles and large, non-original, flat-roofed, aluminum-clad dormers on both side elevations transforming the original one-story building into a two-story residence. The front elevation is clad with orange face brick, the gables are clad with aluminum siding, and the lower side elevations are clad with common brick. The front elevation has a centrally located hollow core metal paneled door with fanlight, three concrete steps with metal railings, two pairs of windows on the first floor and a single window in the gable. Windows are non-original one-over-one aluminum sash. The front door and windows are sheltered by metal awnings. Detailing includes concrete sills and brick lintel arches. This house does not feature distinguishing architectural elements or sufficient integrity to be individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This one-story bungalow at the northwest corner of Eggleston and 101st Street in the Washington Heights community is situated on a raised basement and is clad with brown face brick along its two street elevations. It has a hip roof covered with asphalt shingles and hip dormers along both its front and rear elevations. Its front elevation has a curved window group in the basement level with frosted glass casement windows. It has a recessed corner porch with carpeted concrete steps and corner brick pier support, a metal storm door, and a projecting living room bay with one-over-one windows that are partially obscured by a low metal awning. Detailing includes stone block inserts and a planter box. Its 101st Street elevation has glass block basement windows and one-over-one windows on the first floor. This house does not have sufficient distinguishing features to qualify as individually eligible for listing on the National Register.</p>

<p>Property Description:</p> <p>This one-story frame house on the southwest corner of Eggleston and 102nd Street in the Washington Heights community is situated on a raised concrete block basement with glass block windows. It is clad with synthetic siding and has a front gable roof covered with asphalt shingles. Its front elevation has a gabled roof, enclosed porch with a hollow core metal core, wood steps and railings, five windows on the first floor and one in the gable, all of which are non-original one-over-one aluminum-sash. This house lacks integrity, does not feature distinguishing architectural elements, and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This two-flat residential building in the Roseland community is situated on a raised basement and made of rusticated concrete block. The building has a flat roof and parapet. It features a flat-roofed full-width porch, half of which is enclosed and covered with aluminum siding. The enclosed porch has a strip of three non-original one-over-one aluminum-sash windows on its front elevation. The open half of the porch has an entrance with metal storm door, a faux stone corner support, and wood steps flanked by concrete block half-walls. The second floor of the front elevation has a strip of three windows and a single window, which are non-original one-over-one aluminum-sash and have stone sills and lintels. This house lacks integrity and distinctive architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This one-story Craftsman style bungalow in the Roseland community is situated on a raised brick basement and is clad with wood clapboards with wood shingles in the gabled ends. The building has a front gable roof covered with asphalt shingles and overhanging eaves with exposed rafters and decorative knee braces. The front elevation features a partial-width, front-gable, wood porch with squat, squared Doric columns and a boxed cornice. The porch door and adjacent window opening are covered with plywood. There is a group of four one-over-one windows on the first floor and a pair of original wood casement windows in the attic. This is an example of a Craftsman bungalow, an exceedingly common style during the 1910s and 1920s but lacks distinctive architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This concrete block, Quonset utility outbuilding in the West Pullman community is set back from the public right-of-way and has a front elevation with a centrally located garage door opening flanked by a one-over-one window on either side. The 1962 aerial photograph shows two buildings on the property, the extant Quonset and a larger building. The larger building was razed between 2007 and 2012. A one-story building and a trailer standing on the remaining concrete slab from the larger, razed building are also part of this complex but too far from the road for evaluation. Windows appear to be fixed-pane on all buildings within the complex. This building complex does not have distinguishing architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This two-story frame house at the southwest corner of Indiana Avenue and 117th Street in the West Pullman community is situated on a raised concrete block basement with glass block windows and is covered with synthetic siding. The building has a front gable roof covered with asphalt shingles. Its front elevation has a full-width, flat-roof, enclosed sun porch with an off-center metal storm door, concrete steps with metal railings (non-original), and a strip of three windows on the first floor. The second floor of the front elevation has a strip of three windows and a single window, and the attic level has a pair of windows. Windows are non-original one-over-one aluminum-sash. This house lacks integrity and distinctive architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Prepared By: J. Martinez, M. C. Bird, J. Guarino</p> <p>Photo By: S. Katz</p> <p>Date: 30 October 2012</p>	
<p>Property Description:</p> <p>This two-story building in the West Pullman community (formerly part of Kensington) was originally called “Venetian Hall.” The performance hall was built for a cultural/recreational purpose, although it has long since been repurposed as a church. The 1938 Sanborn shows the hall with a stage, balcony, and place for storage of scenery. The street entrance was flanked by two storefronts in 1938, as it is now.</p> <p>The building is clad with face brick on its front elevation and common brick on its side and rear elevations. The building has a flat roof and a shaped parapet with concrete coping. The first floor of the front elevation has a recessed centrally located bay with three pairs of multi-light wood doors and in-filled transoms. This central bay is flanked by two original storefronts with central recessed doors and flanking display windows that are covered with wood and topped by transoms that have been in-filled with glass block. Separating the central bay from the two flanking storefronts are two doors with transoms that provide access to the second floor. The spandrel area directly above the</p>

central entrance bay has a concrete sign plate with incised lettering that reads: “Venetian Hall.” Fenestration on the second floor features six-over-one and three-over-one wood-sash windows arranged in pairs and in groups of three, topped by round-arch stone lintels with rosette motifs. The parapet features a series of Classical shields and swags.

The exterior of this building has good overall integrity, although elements of the original storefronts materials are no longer extant. However, it does not display sufficient distinguishing architectural features to qualify as individually eligible for listing on the National Register for its architecture. Instead, is recommended for individual listing under Criterion A for its original use as a social venue for area residents in the early twentieth century. Local theater houses, such as the Venetian Hall, were jewels within the local communities. It's rare to see an early twentieth century neighborhood social hall that retains its original storefronts and is set within a residential area comprised of worker's housing, rather than along a commercial thoroughfare. The opening of Illinois Terra Cotta works in the first half of the twentieth century brought Italians to Kensington; the area gradually became a center of South Side Italian-American life with the establishment of Venetian Hall and the nearby San Antonio de Padua (patron saint of Venice) Roman Catholic Church.

Katz</p> <p>Date: 10 September 2012</p>	<p>Property Description:</p> <p>Stories: 2</p> <p>This two-story industrial building in West Pullman has a flat roof and parapet. A one-story, flat-roofed north wing is a later addition (1962). The original building has been drastically altered with new brick cladding on the first floor and the removal of original doors and windows on the front elevation. The first floor of the front elevation currently features two small non-original windows. The original window openings on the second floor of the front elevation have been in-filled with brick. Two one-over-one windows have been installed on either side. Window openings on the side elevations have all been altered as well. The parapet retains original decorative brick corbelling along the front and side elevations. This building does not feature sufficient integrity or distinguishing architectural features to qualify as individually eligible for listing on the National Register.</p>

<p>Property Description:</p> <p>This two-story Dutch Colonial style house at the northeast corner of Normal Avenue and 105th Street in the Roseland community is situated on a raised basement and is clad with red face brick. The building has a side-gambrel roof covered with asphalt shingles, a one-story flat-roofed enclosed sun porch surrounded by four-over-one wood-sash windows along its east elevation, and exterior chimneys on both side elevations. The front (105th Street) elevation has a centrally located non-original hollow core metal paneled door, concrete steps, and metal railings. The door was once flanked by fluted pilasters with geometric capitals. The shaft of one of these pilasters has been removed as has the base of the extant pilaster. The door is topped by an unadorned frieze band and a broken pediment and is flanked by strips of three six-over-one and four-over-one wood-sash windows on either side. The shed-roofed second floor of the front elevation has three non-original one-over-one aluminum-sash windows. This house does not have sufficient distinguishing architectural features to qualify as individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This two-story brick-clad house in the Roseland community is situated on a raised basement with glass block windows and has a hip roof covered with asphalt shingles. Its front elevation features a pent roof that spans the three-sided living room bay and an off-center hollow core metal door that is accessed by concrete steps with metal railings. The living room bay features a picture window flanked by non-original one-over-one aluminum-sash windows that are sheltered by a metal awning. The second floor of the front elevation has two non-original one-over-one aluminum-sash windows. Detailing includes concrete sills and decorative stones at the basement level. It does not feature distinguishing architectural features nor does it retain sufficient integrity, therefore, is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This one-story Ranch house at the corner of Normal Avenue and 107th Street in the Roseland community is situated on a raised basement and is clad with orange face brick below the sill line and buff brick above. The building has a cross-gable roof covered with asphalt shingles; gable ends are clad in synthetic siding. A gabled rear wing contains an attached two-car garage. The front (Normal Ave.) elevation has an off-center metal storm door sheltered by a roof overhang supported by a corner open metal post, concrete steps with metal railings, two pairs of non-original one-over-one aluminum-sash windows, and a non-original picture window flanked by one-over-one aluminum-sash windows on the main block. The front elevation of the rear wing has an off-center metal storm door, a roof overhang supported by two open metal posts, and a large glass block window. The side (107th Street) elevation has corner windows that are obscured by foliage but appear to be casements. This house lacks distinctive architectural features and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

<p>Property Description:</p> <p>This one-story Craftsman cottage in the Roseland community has a side-gable roof with overhanging eaves and decorative knee braces. The building is made of masonry units with aluminum siding in its gabled ends. Its front elevation has a recessed corner porch with overhanging gable roof with rafter tails, low walls, and squat, squared wood column supports. The building features a front door tucked into the side of the living room bay, a strip of three casements, and a picture window flanked by what appear to be casements. All windows on the front elevation feature concrete sills. Side elevation windows appear to be non-original one-over-one aluminum-sash. This house lacks distinctive architectural features and is not individually eligible for listing on the National Register.</p>

<p>Property Description:</p> <p>This two-story industrial building in the Roseland community has a flat roof and parapet. It sits within an industrial complex bounded by South Perry Avenue, an alley, and the Union Pacific Railroad line. Its front elevation is clad in painted brick. It has a hollow core metal door with in-filled transom and window openings on the first and second floors that are in-filled with glass block with louvered or casement insets. Most of the face brick at the parapet level has been replaced by a stucco-like material. The uppermost portion of the stepped parapet has bricks arranged as decorative dentils. Other buildings within the paint company complex include one-story sheet metal and brick buildings. These buildings lack integrity, do not have distinguishing architectural features, and are not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

<p>Property Description:</p> <p>This industrial complex of buildings in the Roseland community includes three conjoined brick buildings: a two-story gable-roofed building (A, photo above), a collapsed brick building (B, photos on page 3), and a two-story flat-roofed brick building (C, photos on page 3). Building A has first floor clad in brick with a one-story, flat-roofed, brick commercial wing in front. The upper half of this building is clad in synthetic siding covering clapboards. It is vacant, deteriorated, and many of its window openings have been covered with particle board. Windows along the south side on the first floor are sliding or double-hung. Building B has collapsed. Building C at the far north has a parapet and is clad with red face brick and common brick. The windows with arched lintels have been in-filled with wood and brick. A new door pierces the façade. This complex of building lacks integrity, does not have any distinguishing architectural features, and is not individually eligible for listing on the National Register.</p> <p>Stories: various</p>

Katz</p> <p>Date: 10 September 2012</p> <p>Property Description:</p> <p>This one-story house in the West Pullman community has a gable roof covered with asphalt shingles, overhanging eaves, and a flat-roofed attached one-car garage. Glass blocks with stone sills and brick planter boxes decorate the front of the garage. The front elevation of the house is clad with light orange face brick and features two picture windows, one of which is flanked by narrow one-over-one windows. A stone panel separates the two picture windows. The front gable is clad with synthetic siding in a decorative pattern. The entrance is located along the side elevation and accessed via a flight of concrete steps with metal railings. This house does not feature distinguishing architectural features and is not individually eligible for listing on the National Register.</p>

<p>Property Description:</p> <p>This one-story brick-clad bungalow in the West Pullman community is situated on a raised basement with glass block windows. The building has a hip roof covered with asphalt shingles, overhanging eaves, and gable dormers along its front and rear elevations. The front elevation has a recessed corner porch with a brick pier support at the corner, concrete steps, and a metal railing. Above the basement, windows have been covered with plywood. Detailing includes soldier brick lintels, concrete sills, and concrete insert blocks used as decorative accents. This is an example of a Chicago bungalow, a building type that the City of Chicago has recognized through its Historic Chicago Bungalow Initiative. However, this house lacks distinctive architectural features and is not individually eligible for listing on the National Register.</p>

<p>This two-story multi-family building at the northwest corner of 100th Street and Princeton Avenue in the Roseland community is clad with brown face brick along its two street elevations. It has a raised brick basement with glass block windows, a hip roof covered with asphalt shingles with overhanging eaves, a shed dormer along its 100th Street elevation, and a hip dormer along its rear elevation. The front elevation has an off-center hollow core metal door with two strips of three windows—one on the first floor and one on the second—along with an additional window on the second floor. Fenestration along both street elevations is comprised of three-over-one wood-sash windows. Detailing includes concrete sills, window surrounds with soldier bricks and square concrete insert blocks, and a course of soldier bricks above the first floor windows that spans both street elevations. The brick panels above both the front and side doors feature the same decorative basketweave pattern. This building does not feature sufficient distinguishing architectural features to qualify as individually eligible for listing on the National Register.</p>

<p>Architectural Style: Vernacular</p>	<p>Property Description:</p> <p>This split-level home in the Roseland community has a cross-gabled roof covered with asphalt shingles and is clad with buff and orange face brick. The front elevation's gable is clad with aluminum and has a deep overhang that is supported by two open metal posts. The roofline exhibits an overhanging shed roof along the ridgeline, running the width of the house. The eave of this overhang is clad in vinyl siding. The front elevation's windows and door are obscured by high foliage. Three of the four side elevation windows are covered with plywood. This house does not feature distinguishing architectural features and is not individually eligible for listing on the National Register.</p>

<p>Property Description:</p> <p>This Romanesque Revival style church in the Roseland community has a front elevation and two flanking towers clad with brown face brick, while the remainder of the side elevation and the rear elevation are clad with common brick. It has a gable roof covered with asphalt shingles and gable wall dormers with shaped parapets on both side elevations. The east tower has a flat roof and a shaped parapet while the west tower has a peaked roof with overhanging eaves and exposed rafters and is topped by a finial. The central bay of the front elevation has a broad, round-arched entrance with stone surround and two sets of single-light oak double-doors. The central bay also contains a strip of double-hung windows situated within a broad arch and a rose window with tracery. Fenestration on the both towers and along the side elevations comprises round-arch windows with tracery. It is unknown whether the original stained glass for all of these windows is extant inside the church. Both towers also feature paired casement windows. Window openings at the top of the west tower have been boarded-over. Detailing includes stone sills, belt courses, brick</p> <p style="text-align: right;">Stories: 2</p>

<p>Prepared By: C. Tolmie, M. C. Bird, J. Guarino</p> <p>Photo By: S. Katz</p> <p>Date: 6 September 2012</p>	
<p>Property Description:</p> <p>This two-story light industrial building is clad with face brick and common brick along its front and side elevations, respectively, and has a flat roof and parapet. The front elevation has an off-center entrance with no door, a large window opening on the first floor that is obscured by foliage, and window openings on the second floor that have been in-filled with both wood and brick. The buff brick between the first and second floors and at the parapet level contrasts with the red brick cladding of the front elevation and may be non-original. Detailing includes dentil molding on the parapet, banding in brick, and stone sills. Side elevation windows are in-filled with glass block. This building lacks integrity and architectural distinction and is not individually eligible for listing on the National Register.</p> <p style="text-align: right;">Stories: 2</p>

The building has a front gable roof covered with asphalt shingles and overhanging eaves with decorative knee braces. The front elevation is covered with faux stone to the top of the first floor windows and in vertical synthetic siding above. It has a partially recessed gable-roofed corner porch with sidewalls covered with synthetic siding, two low squared wood column supports, and wood steps. A glass block window and hollow core metal door are tucked into one side of the porch. A strip of four windows on the first floor and a pair of windows in the gable are non-original one-over-one aluminum-sash. This house lacks integrity and distinctive architectural features and is not individually eligible for listing on the National Register.</p>

<p>Architectural Style: Vernacular</p>	
<p>Prepared By: C. Tolmie, M. C. Bird, J. Guarino</p> <p>Photo By: S. Katz</p> <p>Date: 16 September 2012</p>	<p>Property Description:</p> <p>This four-story building at the northeast corner of Wentworth Avenue and 113th Place in the Roseland community has a flat roof and parapet. Its symmetrical front (Wentworth Avenue) elevation is clad with brown face brick and has a centrally located entrance with a glass door and stone surround topped by two stone owls holding books. Windows are non-original one-over-one aluminum-sash; those directly above the entrance have stone casings. Detailing includes stone sills, coping, insert blocks, sill courses, cornice, panels, and pinnacles at the parapet level.</p> <p>This building is recommended locally significant for National Register listing under Criterion A for Education. Formerly the Roseland Community Hospital Nurses Home, it was built by the hospital as a dormitory and educational facility for its nurses. Closely affiliated with Roseland Community Hospital, which has served as an important institution in the Roseland area since its establishment in 1924, the Nurses Home is an excellent example of this building type on Chicago's South Side. The exterior of the building has very good integrity and the interior—which now functions as a homeless shelter—appears to retain classrooms and other spaces associated with its original use.</p>

<p>Property Description:</p> <p>This one-story Craftsman style bungalow in the Roseland community is situated on a raised basement, is clad with brick, and has a side-gabled roof covered with asphalt shingles and overhanging eaves. Its side-gabled elevations are clad with synthetic siding, as is the gable dormer along the front elevation. The roof extends beyond the front elevation to serve as the roof of the porch, which is supported by open metal posts and has metal railings, a wooden deck, and wooden steps. The front elevation features an off-center hollow core metal door, a leaded glass casement window, and two strips of non-original double-hung aluminum-sash windows: one on the first floor and one in the dormer. This home does not feature sufficient distinguishing features to qualify as eligible for individual listing on the National Register.</p> <p style="text-align: right;">Stories: 1</p>

MEETING NOTES

RE: Section 106 Kick-off Meeting
Red Line Extension EIS

DATE: October 24, 2012

LOCATION: Conference Call/Webinar

TO: Distribution and All Attendees

ATTENDEES:

Name	Organization
Sonali Tandon	CTA
Reggie Arkell	FTA
Anne Haaker	IHPA (SHPO)
Jonathan Fine	Preservation Chicago
Terry Tatum	Chicago Historic Preservation Division
Lisa DiChiera	Landmarks Illinois
Erma Tranter	Friends of the Park
Helene Kornblatt	CWC Transit Group
John Mettille	CWC Transit Group
Rebecca Thompson	CWC Transit Group
Robert Ball	CWC Transit Group

PREPARED BY: Rebecca Thompson

ISSUE DATE: October 24, 2012

Meeting called to order at 1:00 pm CT

Objective: Red Link Extension Kickoff Meeting for Section 106 Consultation

<i>Item No.</i>	<i>Item Description</i>	<i>Responsibility</i>	<i>Due Date</i>
1	Welcome/Intro Sonali welcomed attendees and callers introduced themselves.		
2	Overview of Section 106 Process John Mettille provided an overview of the four-step Section 106 process. Reggie Arkell explained that FTA is overseeing the consultation process, working in conjunction with CTA. FTA will make determinations regarding eligibility and effects, referencing recommendations prepared by the consultant and considering input from consulting parties, including the SHPO. John discussed the roles of consulting parties and identified ground rules to ensure everyone has a fair chance to provide meaningful input.		

Item No.	Item Description	Responsibility	Due Date
3	<p>Project Info & Alternatives</p> <p>Sonali provided a brief overview of the project area, the No Build alternative, and the three Build alternatives that are being considered: UPRR rail, Halsted rail, and Bus Rapid Transit.</p> <p>John presented the Area of Potential Effects (APE), which defines the geographic boundary where the analysis of historic resources will occur. A larger scale APE map is attached to the meeting summary.</p>		
4	<p>Schedule/Next Steps</p> <p>John explained the next steps in the process. Work is underway to identify potential historic properties. We are tentatively planning to hold a meeting to discuss the eligibility of resources in December. A meeting to discuss effects will occur in early 2013.</p>		
5	<p>Question/Answer</p> <ul style="list-style-type: none"> - Jonathan: Is the purple segment on the alternatives map new or existing? It would be a new structure in the median of the expressway. - Reggie: What is the pier spacing for the Halsted Alternative? Spans between piers would typically be 60 to 100 feet, and as long as 140 feet. Span length would be based on site conditions, geometrics, and clearance requirements. - Jonathan: What advantages does the Halsted Alternative offer over the No Build Alternative? Halsted would extend the red line south to serve additional transit markets. The No Build Alternative includes improvements at the 95th Street station which are currently being planned but would not include an extension of the route or other improvements. - Jonathan: Which alternative has the least impacts on historic resources? That is part of what we will determine through this process. - Lisa: Is documentation of the previous study available online? Yes, the project website is http://www.transitchicago.com/redeis Please use following links to access specific materials: Locally Preferred Alternative Report and Scoping Report (http://www.transitchicago.com/Redeis/documents.aspx); Alternatives Analysis Materials (http://www.transitchicago.com/news_initiatives/planning/redextend.aspx) - Lisa: If we have additional information about resources, should we send it to the team? Yes, please direct it to Sonali at STandon@transitchicago.com. - Erma: Are parks covered in the 106 process too? Parks are protected under Section 4(f) regulation, which is a separate law; they will be addressed in the project EIS. The Section 106 process will deal with historic resources; if any parks in the area or park facilities are determined to be historic, they will be considered during the 106 process. If any historic resources are used by the project, they will be addressed under Section 4(f) as well. Parks that are not historic are subject to the 4(f). 		

Please notify the author of the minutes of any corrections and/or clarifications within five (5) business days.

PREPARED BY: Rebecca Thompson

ISSUE DATE: January 31, 2013

Meeting called to order at 10:30 am CT

Objective: Red Link Extension Eligibility Meeting for Section 106 Consultation

<i>Item No.</i>	<i>Item Description</i>	<i>Responsibility</i>	<i>Due Date</i>
1	Welcome/Intro Sonali welcomed attendees. Reggie Arkell explained FTA's oversight role on the project. John Mettillle reviewed the agenda.		
2	Background & Regulations John Mettillle provided an overview of the four-step Section 106 process, which is intended to assess historic resources and their eligibility for listing on the National Register of Historic Places (NRHP). John identified ground rules to ensure everyone has a fair chance to provide meaningful input.		
3	Review of Area of Potential Effects (APE) John presented the APE, which defines the geographic boundary where the analysis of historic resources will occur. The area includes over 1,400 acres and 7,000 buildings.		
4	Methodology for Identification of Historic Properties The team developed historic contexts for each community in the APE to frame the evaluation of historic properties. The team also conducted field surveys and archival research for over 500 individual properties within the APE. The survey sample included all buildings that would be demolished by one or more alternatives and a sample of other properties; sample properties were concentrated in areas that are likely to experience greater effects. Based on this, eligibility recommendations were developed for individual properties. <ul style="list-style-type: none">- Q: Did you look at properties less than 50 years in age that could be significant to the community? A: We primarily examined properties over 50, but we did look for overall significant properties as well as potential historic districts.- Q: Are Chicago Historic Resources Survey (CHRS) red/orange properties shown? A: They are noted in the summary table in section 3 of the handout packet.- Q: What research was done on the social history of the area? For example, what about identifying community meeting places or locations significant in the lives of civil rights leaders? Of the 7,000 buildings in the APE, it is concerning that only 10 are identified as eligible.		

Item No.	Item Description	Responsibility	Due Date
	<p>A: The team developed historic contexts for each of the communities represented in the APE but these focused primarily on the built environment. Part of the intent of the consultation process is to gather your input about what additional resources are out there, particularly from organizations more familiar with the immediately vicinity and social history. If you have information about potentially significant resources, please let us know during the comment period.</p>		
5	<p>Overview of Surveyed Properties</p> <p>Nine properties were recommended eligible for NRHP listing.</p> <ul style="list-style-type: none"> - Residence at 444 W 100th Place - Former substation at 10227 S Halsted Street (gas & electric for the city) - Fire Department at 324 W 104th Street - Roseland Pumping Station (still in use) - Residence at 11310 S Emerald Avenue - Church at 10920 S Princeton Avenue (currently Mary Magdalena Missionary Baptist Church) - Fire Department at 931 W 120th Street - Church at 12433-12439 S Halsted Street - Venetian Hall at 133-139 E Kensington Avenue (currently used as church and shelter) <i>Note: the address is correct but the property lies in the West Pullman community.</i> <p>In addition, Altgeld Gardens was determined NRHP eligible in 1992 independent of the project.</p> <ul style="list-style-type: none"> - Q: How do you account for the fact that the community is under surveyed and underserved? Underrepresentation undercuts the intention of the project. <p>A: The team prepared historic contexts for each community, consistent with the state of the practice. Beyond that, we rely on your input. Once you provide your comments, the team will establish a strategy to move forward. We will respond to comments received and keep you informed.</p> <ul style="list-style-type: none"> - Q: Does the list of surveyed properties fully cover the area to be considered in the historic/social context? (DCP agreed that it does not.) <p>A: The APE covers the area that could be impacted by the project; it forms the limits for our analysis.</p> <ul style="list-style-type: none"> - Q: Is there a separate involvement process for Section 4(f)? <p>A: There is a public involvement element if these resources are affected. It isn't a committee, but there is a mechanism to gather input from agencies and others.</p> <ul style="list-style-type: none"> - Kensington Park along the UPRR corridor should be added to the table on slide 29. <i>Note: information for Fernwood Parkway was included in the table although the name was mistakenly presented as "Fernwood Park" instead. Wendell-Smith Park is presented as "Smith Playlot" in the table, consistent with the Chicago Parks Department naming convention.</i> 	CWC	3/1

<i>Item No.</i>	<i>Item Description</i>	<i>Responsibility</i>	<i>Due Date</i>
6	<p>Schedule & Next Steps</p> <p>John Mettillie reviewed the schedule and next steps.</p> <ul style="list-style-type: none"> - Q: Can you describe the effects for each eligible property? A: We will cover this in the next phase of the process, probably in Spring 2013. - Q: What is the third alternative shown? A: The Halsted Alternative was added during the scoping process to look for options to minimize the impacts on parks and other 4(f) resources. The UPRR Alternative is the locally preferred alternative; we will define a National Environmental Policy Act (NEPA) preferred alternative as part of the NEPA process. - Q: Can the UPRR alternative fall anywhere inside the APE boundary? A: No, it will follow or run adjacent to the existing UPRR alignment. The APE includes a buffer to account for visual, noise, and other indirect effects. - Q: What source did you use for the architects and construction dates? A: CHRS and the County Assessor website. - Two of the photos on slide 26 could be considered contributing within a district. There are enough "Ranchalows" that they could be considered a housing style. <p>The team will provide a full survey map and consulting party list as requested by attendees. Materials will be revised to clarify that properties referenced in Riverdale lie in the Riverdale Community in Chicago rather than Riverdale, Illinois. Please submit written comments on the eligibility materials by February 18.</p>	CWC/CTA	2/6

Following the morning presentation, a number of attendees participated in a driving tour of the project area. Please notify Sonali Tandon of the minutes of any corrections and/or clarifications within five (5) business days.

cc: Attendees

Red Line Extension (RLE) Summary of Eligibility Comments received from Consulting Parties and Responses from Project Team

The following paragraphs briefly summarize comments received from the consulting parties on the eligibility of historic resources for the RLE Project and corresponding responses from the project team. Under the Section 106 consultation process, CTA undertook an extensive data collection and analysis effort during Fall 2012 to identify historic resources located within the Area of Potential Effect (APE) for the three built alternatives that are under evaluation in the RLE Draft Environmental Impact Statement (EIS). This analysis culminated in recommendations regarding the potential eligibility of historic resources pursuant to the National Historic Preservation Act of 1966. These recommendations were presented to the ten consulting parties, including the Illinois Historic Preservation Agency (SHPO), during a meeting on January 30, 2013. Participants were asked to provide relevant information from their perspective that may supplement the National Register of Historic Places (NRHP) evaluations contained within the RLE Draft EIS. Written comments were received from the following six organizations:

- Anne Haaker, Illinois Historic Preservation Agency
- Jennifer Kenny, Ridge Historical Society
- Jonathan Fine, Preservation Chicago
- Lisa DiChiera, Landmarks Illinois
- Matt Cole, Neighborhood Housing Services of Chicago
- Terry Tatum, Chicago Historic Preservation Division, Department of Housing and Economic Development

Based on local knowledge and input from the consulting parties, additional analysis was undertaken regarding historic resources within the APE. The original recommendations presented in January will be revised as described below and presented in the RLE Draft EIS. In addition to the written comments received by CTA, comments from the January 30 meeting will also be incorporated into the Draft EIS to provide additional clarification. Comments and responses are presented by general topic below.

Comments requesting additional surveys:

Several comments requested that the team evaluate additional sites for NRHP eligibility. These additional sites and their evaluations are summarized below, including both individual properties (Comments #1-6) and potential districts (Comments #7-12).

1. American Ideal Cleaning Building at 10343 South Michigan Avenue
[This building falls beyond the APE boundaries.](#)
2. Lilydale Progressive Missionary Baptist Church at 10716 South Michigan Avenue
[This building falls beyond the APE boundaries.](#)
3. Greystone building at 11445-11447 South Michigan Avenue
[This building falls beyond the APE boundaries.](#)
4. Entrance gate and structure at Cedar Park Cemetery at 12584 South Halsted Street
[These structures were field surveyed in February 2013 and are recommended eligible for the NRHP under Criterion C for the high quality craftsmanship and unusual stonework. A site form is attached.](#)

5. Kensington Park

The Park was field surveyed and, following archival research is not recommended eligible for the NRHP. Purchased by the City in 1942, Kensington Park has been updated throughout the decades and currently contains a number of contemporary recreational amenities that give it a recent appearance: a mid-twentieth century field house that is no longer in use, playground equipment, a splash pad, a paved basketball court, a horseshoe pit, and baseball fields. Although the field house is over 50 years in age, it lacks distinguishing architectural features. As a publicly-owned park, Kensington Park will be addressed in the NEPA document as a Section 4(f) resource.

6. Two-story commercial building at 11206 South Michigan Avenue

The building was surveyed and is not recommended eligible for the NRHP due to its lack of integrity and distinguishing architectural features. The site form is included on the Eligibility CD as 11200-11206 S Michigan Avenue.

Note: A number of sources consulted during the archival research phase – including the City of Chicago GIS database, Illinois Historic Preservation Agency's HARGIS database, County Assessor Records, and others – present building addresses inconsistently. Street numbers may differ by several addresses: the church at 12433-12439 South Halsted Street is called 12427 South Halsted Street by a different agency, though both refer to the same building. To aid comparisons, the summary table notes alternate addresses for several properties when these inconsistencies were identified during the eligibility assessments.

7. Potential historic district/grouping of cast stone-faced residences on South Eggleston Avenue between 111th & 112th Streets

Numerous buildings in this location were surveyed as part of the representative sample set, including one cast stone-faced residence on South Eggleston Avenue (11130 South Eggleston Avenue). Individually, this building was not recommended eligible for the NRHP due to its lack of integrity and distinguishing architectural features. Along South Eggleston Avenue near West 111th Street and West 112th Street, there appear to be only two cast stone-faced residences within the APE, which is not sufficient for these properties to be considered as a potential historic district or multiple property grouping.

8. Could groupings of ranchelows contribute to a future NRHP district (between 103rd St, 104th Pl, UPRR, and Princeton Ave)?

A number of raised ranches were surveyed as part of the representative sample set; none were found to merit individual listing for the NRHP. Although the area (between 103rd St, 104th Pl, UPRR line, and Princeton Ave) contains numerous residences with similar architectural styles, massing, setbacks, and construction dates, architectural historians confirmed that these properties do not retain sufficient integrity for the NRHP as a district due to contemporary - alterations (e.g., replacement siding, porches, windows, and doors). Numerous vacant lots and recent construction, such as the post-1980 Langston Hughes Elementary School that encompasses an entire city block, disrupts the visual cohesiveness of this area.

9. Potential district of Residential Railroad Suburbs or Historic Streetcar Communities, e.g. along the Chicago & Eastern Illinois RR; the Chicago & Great Eastern RR; the Illinois Central RR 121st Street spur; or streetcars along Michigan Ave, 103rd St, 111th St, 115th St, and 119th St.

After additional fieldwork, no cohesive groupings of historic commercial buildings or community centers were identified along the primary thoroughfares that supported streetcar lines, railroad

lines, or spurs. Therefore, the suggested areas are not recommended as a district or multiple property group.

10. Potential district/group of properties associated with the former Village of Fernwood, generally located between 90th St, 103rd St, Stewart Ave, and Morgan/Halsted Street
As part of the original fieldwork effort, a handful of these resources were surveyed within the APE. As noted in the letter, many have integrity issues. Many of Fernwood's signature buildings are located outside the APE or have been demolished. Further, the amount of contemporary infill has compromised the historic setting of the residential suburb. Therefore, this area is not recommended as a district or multiple property group.
11. Potential district/group of historic automobile-related buildings along major thoroughfares (e.g. Halsted and Michigan Ave)
Although a number of auto-related resources were surveyed within the APE, none exhibited sufficient historic integrity to qualify as eligible for the NRHP either individually or as a contributing resource within a multiple property group. All of the surveyed automotive service buildings exhibit contemporary alterations.
12. Chicago Georgian and Raised Ranch Historic Districts
The Ridge Historical Society and other consulting parties suggested these styles be considered as part of the eligibility discussions for the Section 106 process. Review by architectural historians confirmed that a cluster of these properties exists along an approximately five block area on the east side of Green Street between 104th Street and 109th Street. The streetscape has a cohesive grouping of vernacular homes that is representative of residences that were constructed in the outlying areas of Chicago during the post-World War II era. Although such neighborhoods are common throughout the city, these five blocks include hipped-roof ranch homes, front-gabled cottages, and Chicago Georgian style homes with little to no contemporary infill. The residences date from the 1950s and 1960s with consistent setbacks and similar brick cladding; they appear to be well-maintained. Therefore, the portion of Green Street between 104th Street and 109th Street is recommended as eligible for the NRHP as a historic district for architecture (Criterion C).

Comments requesting reconsideration of surveyed properties:

Several comments requested that the team reconsider properties that were surveyed but recommended not eligible for NRHP listing at the January meeting. These additional properties and their evaluations are summarized below.

13. Sure-Way M.B. Church at the southwest corner of Halsted Street and 120th Street
The building is not recommended eligible for the NRHP due to lack of integrity and because it no longer serves its original use. The site form is included on the Eligibility CD as 12000 S Halsted Street.
14. Fernwood Parkway
Fernwood Parkway was evaluated against NRHP criteria and is recommended not eligible for NRHP listing. However, as a publicly-owned park, it will be addressed in the NEPA document as a Section 4(f) resource.
15. Roseland Auto Sales & Service at 11200 South Halsted Street
The building is not recommended eligible for the NRHP due to its lack of integrity. The setting is compromised by contemporary infill and the exterior has been clad in modern materials. The site form is included on the Eligibility CD as 11200 S Halsted Street.

16. Bethany Reformed Church Manse at Three West 111th Place
The building was not originally recommended eligible due to its lack of distinguishing architectural features. However, as a result of additional information provided by Ridge Historical Society, the resource is recommended eligible for the NRHP under Criterion B due to its association with Reverend Harry J. Hager (1899-1983), a pioneer in media evangelism in Chicago during the mid-twentieth century. A revised site form is attached.
17. Pridjian & Co Building at 11600 South Halsted Street
The building is not recommended eligible due to its lack of distinguishing architectural features. While the Pridjian & Company business has been in operation for decades, the property does not reach the level of significance required by the NRHP. The site form is included on the Eligibility CD as 11600 S Halsted Street.
18. Roseland Community Hospital Nurse's Home at 11321 South Wentworth Avenue
The building was surveyed and was not originally recommended eligible due to its lack of distinguishing architectural features. However, as a result of additional information provided by Ridge Historical Society during the eligibility discussions for the Section 106 process, the resource could be considered locally significant under Criterion A for Education based on its use as a dormitory for its nurses and as an important nurse training facility. A revised site form is attached.
19. Galloy & Van Etten Cut Stone Contractors Building at 11756 South Halsted Street
The building was not originally recommended eligible under Criterion C due to its lack of integrity and distinguishing architectural features. However, as a result of additional information provided by Ridge Historical Society during the eligibility discussions for the Section 106 process, the resource could be considered locally significant under Criterion A for its longstanding association with the local construction industry as a 113-year old stone contracting company. A revised site form is attached.
20. Would the substation at 10227 South Halsted Street be eligible under Criterion A as well?
Yes: the substation is recommended eligible under Criterion A for its association with utilities infrastructure within the city of Chicago. At the January 2013 meeting, it was recommended as NRHP eligible under Criterion C. A revised site form is attached indicating this building as eligible both under Criterion A and Criterion C.
21. Although noted architect Murray Hetherington designed the house at 11001 S Green Street, the resource was only evaluated based on its integrity.
Numerous residences designed by Hetherington that exhibit greater integrity exist today, including 2078 West Hopkins Place, 8918 South Hamilton Avenue, and 8929 South Hamilton Avenue. Due to the compromised integrity of the Green Street property, it is not recommended as NRHP eligible. The site form is included on the Eligibility CD as 11001 S Green St.

Comments regarding assessment of effects:

The following comments expressed concern about the assessment of effects, which will be covered in the next phase of the consultation process. Noted below, these will be considered in the next phase of the analysis.

22. We object to historic properties being purchased and demolished for construction staging.
23. The proposed BRT route would affect the fewest cultural resources. The UPRR route will affect fewer resources than the proposed Halsted line.

24. Building an elevated rail line down Halsted Street would have negative consequences for the tranquil and bucolic atmosphere of the Cedar Park Cemetery.

Comments requesting minor amendments to the summary table and/or site forms:

The following comments identified minor amendments to the summary table and/or site forms for individual properties. None of these modifications change the NRHP eligibility recommendations. Noted below, these edits will be incorporated; revised materials will be provided along with the effects materials prior to the next phase of the consultation process.

25. The Fire Department Engine Co. 93 building at 324 West 104th Street (alternate address: 328-330 W. 104th St.) is CHRS Orange
26. The Roseland Pumping Station at 351 West 104th Street is CHRS Orange
27. The French Eclectic style house at 11310 South Emerald Avenue was listed as a “local landmark” but is not designated; it is CHRS Orange.
28. The Romanesque Revival style Church at 10920 South Princeton Street is CHRS Orange
29. The two-story commercial building at 11206 South Michigan Avenue is CHRS Orange
30. The architectural firm of Fox & Fox designed the church at 12433-1439 South Halsted Street, which was built in 1958-1959.
31. The Venetian Hall at 133-139 East Kensington Avenue was built in 1925-1926 and designed by Arthur F Hughes.
32. The house at 11310 South Emerald Avenue was built 1927-1928 for Stuart Colman. Inventory form should specify this resource is individually eligible.
33. Property listed as 748 East 103rd Street should be 748 West 103rd Street.
34. The substation at 10227 South Halsted Street was built in 1919-1920.

Other Comments:

Additional comments received are discussed below.

35. There should be a separate category in the spreadsheet for Chicago properties rated as “orange” on the Chicago Historic Resources Survey (CHRS).
CHRS Orange properties were noted in the summary table provided to consulting parties on January 5, 2013. These properties will be discussed separately within the project’s Environmental Impact Statement.
36. We [SHPO] generally concur with the findings of the architectural surveys. It is expected that additional resources suggested will be considered once the final route is selected.
Comment noted.
37. While we agree that the house at 444 West 100th Place is NRHP eligible, we disagree about the Neo-Traditional style description and are concerned that the replacement of the original tile roof jeopardizes integrity.
Based on the ornamentation (Neo-Gothic castellated porch roof, Classical colonettes, and arched lintels), the house was identified as an early example of the Neo-Traditional style. It is recommended as NRHP eligible and will be assessed for effects in the next phase of the consultation process.
38. Use of catch-all architectural style descriptors was inconsistent and difficult to sort/review.
Many of the residential resources are stripped-down brick and frame bungalows and cottages representing the predominant building stock for the study area. Likewise, commercial resources

contain little ornamentation or detailing. The broad term “vernacular” was used whenever a resource did not exhibit a particular architectural style. This approach is consistent with the current state-of-the-practice.

39. Historic functions should match NRHP categories.

While official NRHP functions were not used on the survey forms, easily identifiable equivalent terms were used to improve comprehension for a broader audience. This approach is consistent with the current state-of-the-practice.

40. Construction dates listed in the Cook County Assessor Records are less reliable than dates listed in building permit records.

Numerous varied sources were used to establish and cross-check construction dates: County Assessor records, GIS database layers provided by the City of Chicago, the HARGIS database maintained by the Illinois Historic Preservation Agency, Sanborn mapping, etc. This approach is consistent with the current state-of-the-practice.

41. The church at 10920 South Princeton Avenue is currently called Mary Magdalene Missionary Baptist Church.

The church at 10920 South Princeton Avenue was identified by both its historic name (First Christian Reform Church of Roseland) and its current name (Mary Magdalene Missionary Baptist Church) on the inventory form. The property is eligible for the NRHP due in part to its association with early Dutch settlement in the area, so the historic name was referenced in the presentation.

Red Line Extension

February 4, 2013

Sonali Tandon
Chicago Transit Authority
567 W. Lake St.
Chicago, IL 60661-1498

Dear Ms. Tandon:

Thank you for requesting comments from our office concerning the possible effects of the referenced project on cultural resources. Our comments are required by Section 106 of the National Historic Preservation Act of 1966, as amended, and its implementing regulations, 36 CFR 800: "Protection of Historic Properties".

We appreciated information provided during the meeting at the CTA on January 30, 2013, and the tour that augmented the architectural surveys and introduced the three routes proposed by the CTA. In general we concur with the findings of the architectural surveys submitted to this office prior to the meeting and tour, but during the tour it was noted that resources identified on the Chicago Historic Resources Survey were not identified and that structures such as those located within Cedar Park Cemetery were excluded from the sample. It is likely that our preservation partners present at the meeting will have additional resources that they would like to see included in the survey. It is expected that these additional resources will be considered once a final route has been selected.

In our opinion, the proposed expansion of the BRT route will affect the least amount of cultural resources located within its APE. We also believe the UPRR route that is often adjacent to existing railroad tracks will affect fewer resources than the line proposed on Halsted Street.

We look forward to reviewing the final historic resources report once the comments of our preservation partners have been considered.

If you have questions please contact David J. Halpin, Cultural Resources Manager, at 217-785-4998.

Sincerely,

Anne E. Haaker
Deputy State Historic
Preservation Officer

Subject: Red Line Extension Section 106 - comments on historic resource identification

Dear Ms. Tandon:

Thank you for the opportunity to comment on historic resource identification efforts for the Red Line Extension Project as part of the ongoing Section 106 consultation process for this project. Our office appreciates the scale and importance of this undertaking, and we commend the CTA's efforts to incorporate historic preservation issues and concerns into its larger planning efforts. We hope to work with you to minimize the effect of the Red Line Extension Project on historic properties.

As part of the Section 106 process, we wish to bring to your attention both general observations on this historic resource identification effort, as well as comments on specific properties that may be impacted by the project.

Chicago Historic Resources Survey red- and orange-rated properties

With the help of your consultant team, you have preliminarily identified properties that are eligible for NR listing. These properties have been listed in the "RLE Draft Eligibility Findings for Surveyed Properties" spreadsheet.

Our office believes that there should be a separate category in the spreadsheet for Chicago properties rated as "orange" on the Chicago Historic Resources Survey. (There are no CHRS "red-rated" buildings in the Red Line Extension's APEs.) Conducted between 1983 and 1995, this city-wide survey identified properties constructed prior to 1940 that were perceived to have, within at least the context of their neighborhoods, some historic significance to these neighborhoods. These buildings were either color-coded red or orange, depending upon the level of their historical and architectural significance as known at the time of the survey.

Although not designated Chicago Landmarks, these CHRS "red" and "orange"-rated properties are covered by the City's Demolition-Delay Ordinance, enacted by City Council in 2003, which allows for an up-to-90-day hold on building permit applications for demolition by the Department of Housing and Economic Development (DHED) for these properties. (More information on this ordinance can be found at http://www.cityofchicago.org/city/en/depts/dcd/supp_info/demolition_delay.html.) Even where such properties have also been determined eligible for National Register listing, we believe that it is prudent of the CTA to separately identify all CHRS orange-rated properties within the APEs on the historic resources spreadsheet. The effect of the Red Line Extension Project on these "orange" properties can then be determined and, if necessary, mitigated through direct discussions with DHED as early in the project as possible.

Observations concerning individual properties located in the APEs

1. Several buildings identified as "orange-rated" in the Chicago Historic Resources Survey (CHRS) were sampled by the CTA's historic resources consultants.

The **Classical Revival substation** at 10227 S. Halsted St. (Map 7) was determined eligible for National Register listing. It is a CHRS “orange-rated” building and was noted as such on the spreadsheet.

The **Fire Department Engine Co. 93 building** at 324 W. 104th St. (alternate: 328-330 W. 104th St.) (Map 30) was preliminarily determined eligible for National Register listing. It is a CHRS “orange-rated” building, but was not noted as such on the spreadsheet. It should be so noted.

The **Roseland Pumping Station** at 351 W. 104th St. (Map 30) was preliminarily determined eligible for National Register listing. It is a CHRS “orange-rated” building, but was not noted as such on the spreadsheet. It should be so noted.

The **French Eclectic style house** at 11310 S. Emerald Ave. (Map 12) was listed as a “local landmark” and preliminarily determined eligible of NR listing. However, it is not a designated Chicago Landmark. Instead, it is an “orange-rated” building in the CHRS, but was not noted as such on the spreadsheet. It should be so noted.

The **Romanesque Revival style Church** at 10920 S. Princeton St. (Map 34) was preliminarily determined eligible for National Register listing. It is a CHRS “orange-rated” building, but was not noted as such on the spreadsheet. It should be so noted.

2. In addition, one building identified as “orange-rated” on the CHRS and located within the APE for the BRT option was not identified and sampled. The **two-story commercial building** at 11206 S. Michigan Ave. (listed as 11208 S. Michigan on Map 45) was not sampled by the historic resource survey. It is an “orange-rated” building in the CHRS (CHRS data form and Google Earth photo attached) and should be noted as such on the spreadsheet. It should also be separately evaluated for National Register eligibility.

I would be pleased to assist the CTA’s consultant team as they gather additional information on historic resources within the APEs for this project.

Sincerely,

Terry

RE: Red Line Extension— NR eligible properties in APE

Dear Ms. Tandon,

As requested, we have reviewed the APE boundaries and the properties identified within the APE that are listed in or "eligible" for listing in the National Register of Historic Places by the Red Line Extension project team.

We are very pleased to see the numerous properties identified and acknowledged as historic. However we have the following observations:

- We recommend including all properties that are orange-rated in the Chicago Historic Resources Survey (CHRS) in a separate category due to the fact that they will require an additional mitigation process through the city's demolition delay ordinance.
- During the driving tour of the preferred Red Line Extension routes, I took note of the following properties that were not included in the project team's list of eligible properties that looked as if they could be of possible architectural significance.
 - The American Ideal Cleaning Building at 10343 S. Michigan – a mid-century commercial building
 - The Lilydale Progressive M.B. Church at 10716 S. Michigan
 - City Sports store commercial block at 11102 S. Michigan
 - 11445-47 S. Michigan – Commercial/residential side by side Greystone – rated orange in CHRS
 - 11451 S. Michigan – one story commercial Art Deco building – rated orange in CHRS
 - Sure-Way Missionary Baptist Church at S.W. corner of Halsted and 120th. Art Deco corner building with a mid-century addition on the south side
 - Entrance gates and structure to Cedar Park Cemetery, 12584 S. Halsted
- Based on precedent with the Brown Line renovation project, we object to historic properties being purchased and demolished to make way for construction staging. We hope the team will specifically identify historic properties in the areas where construction staging may be planned to help identify alternative locations.

Thank you for the opportunity to review the findings by your team for this project. Please let me know if we can be of further assistance before the next consultation.

Sincerely,

Lisa DiChiera

RE: Red Line Extension – National Register eligible properties in APE

Dear Ms. Tandon,

As a housing and community development organization with longstanding ties to the greater Roseland area, we appreciate CTA inviting Neighborhood Housing Services of Chicago, Inc. (NHS) to participate in the Section 106 review for the proposed Red Line Extension routes. NHS believes the Red Line Extension project will ultimately enhance the livability and well-being of Roseland and surrounding neighborhoods by increasing transit access for residents. At the same time, we wish to ensure that the project minimizes any undue impacts on the existing residential, community, and historic buildings that make these neighborhoods great and that our experience has shown can be important community-building and engagement assets. Therefore, NHS would like to submit the following comments regarding the National Register eligible properties surveyed by the Red Line Extension project team in the APE:

- We recommend re-evaluating the exclusion of raised ranches – colloquially referred to “ranchelows” for looking like a cross between a Chicago bungalow and a ranch-style home – from the survey. While currently not a formally recognized form of Chicago vernacular architecture, these homes define the look and character of large stretches of the APE adjacent to UPRR right-of-way. We would encourage the CTA project team to determine if groupings of “ranchelows” in the APE could contribute to a future National Register district.
- During the van tour of the preferred Red Line Extension routes on January 30th, we also took note of the following areas that warrant additional surveying/review by the project team:
 - 111th & 112th South Eggleston: A few cast stone-faced residences were observed on or adjacent to these blocks, including one home immediately adjacent to the UPRR right-of-way. These buildings, which look similar to Chicago greystones, are relatively rare and should be evaluated for National Register eligibility.
 - 103rd Street to 104th Place between the UPRR and Princeton Avenue: This area includes the previously identified, National Register-eligible Roseland Pumping Station and Roseland Fire Station properties. However, the blocks also include a largely intact and well-maintained grouping of Chicago bungalows and frame

cottages. We would encourage the project team to conduct a more detailed survey of these blocks to determine if these residential properties could contribute to a future National Register district.

- Though not directly applicable to the survey of National Register-eligible properties, we encourage the project team to carefully evaluate the potential impact of the Red Line Extension on the Fernwood Parkway that runs immediately west of the existing UPRR right-of-way. Albeit simply landscaped, the parkway provides a nice amenity to homes along Eggleston Avenue between 99th and 104th Streets.

In addition to these observations, we fully concur with the recommendations from Lisa DiChiera, Director of Advocacy, at Landmarks Illinois regarding specifically calling out “orange-rated” properties listed on the Chicago Historic Resources Survey; the additional commercial, religious, and community buildings that should be evaluated on Michigan Avenue and Halsted Street; and avoiding the demolition of any historic properties to make way for construction staging.

Thank you again for inviting NHS to participate in the Section 106 review for the Red Line Extension project. Please let us know if we can be of further assistance before the next scheduled consultation.

Best,

Matt Cole

Re: Red Line Extension – Possible negative effects to historic properties with in the proposed APE

Dear Ms. Tandon,

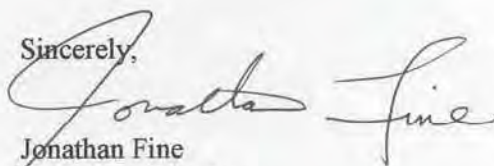

Thank you for facilitating the recent driving tour of the three proposed routes for the Red Line extension. I am writing in response to concerns our organization has regarding possible destruction of historic buildings or landscapes with the APE.

I have had a chance to review the comments being submitted by Landmarks Illinois and we agree with and support all of their concerns.

In addition, we are concerned about the negative consequences that building an elevated rail line down the middle of South Halsted Street would have on the tranquil and bucolic atmosphere of Cedar Park Cemetery.

Thank you for your consideration. We look forward to continuing our partnership on this exciting project.

Sincerely,

Jonathan Fine

www.ridgehistoricalsociety.org

February 20, 2013

Sonali Tandon
Chicago Transit Authority
567 West Lake Street, 10th Floor
Chicago, IL 60661

Dear Sonali,

Thanks for the opportunity to be a consulting party to the CTA's Red Line Extension (RLE) Section 106 eligibility process.

The Ridge Historical Society (RHS) serves the Beverly, Morgan Park and Washington Heights community areas on Chicago's south side. For this reason, we are particularly interested in the RLE impact upon historic properties in the APE situated within the Morgan Park and Washington Heights community areas. Both the Halsted Street and Union Pacific Railroad APE are located at the easternmost boundary of our service area. Please note that we do maintain an archival collection that reaches beyond our service area since our history does overlap with nearby areas, including West Pullman and Roseland. We reserve the right to comment on historic resources in other community areas just outside of our service area.

I have reviewed the materials and inventory forms submitted by the consulting team and offer the following comments.

IDENTIFIED NR ELIGIBLE PROPERTIES

The Ridge Historical Society agrees with the National Register (NR) eligibility of the two properties identified by the study in the Washington Heights community areas (our service area) – 10227 S. Halsted Street and 444 West 100th Place. Unfortunately, the team did not identify any NR eligible properties in the Morgan Park community area.

1. We agree that the City of Chicago Department of Gas and Electricity, Southwest Substation, at **10227 South Halsted Street** is NR eligible under C for its architecture, as a rare remaining example of a city government public works building. As stated on the study's inventory form, it is an orange rated building in the Chicago Historic Resource Survey (CHRS). The CHRS did supply a date of construction, 1919-20, that does not appear on the inventory form. I am wondering if this public works building is also NR eligible under A.
2. We agree that the single family dwelling at **444 West 100th Place**, built 1931, is potentially NR eligible under C for its architecture, as a rare brick Bungalow in

Washington Heights with striking Tudor Revival and Mediterranean Revival detailing. The Bungalow sports a handsome crenellated entry, decorative arches, and colonettes. I would not call this building Neo-Traditional, which is an architectural style reserved for late 20th-century buildings. I am concerned that this home once had a clay tile roof, perhaps jeopardizing its integrity. A similar house, designed by architect John Hoche, can be found in Beverly at 1762 W. 94th Street.

Additionally, I am providing architectural and historic info on other properties in the APE flagged as NR eligible by the team:

- The architectural firm of Fox and Fox designed S. S. Peter and Paul Church, **12433-12439 S. Halsted Street**, 1958-59. Architect John J. Fox, Jr. was a longtime resident of Beverly-Morgan Park and a noted local Roman Catholic church designer. He died in 2003.
- Venetian Hall, **133-139 E. Kensington Avenue**, was built in 1925-26 and designed by architect Arthur F. Hughes. Hughes is a local architect who designed a number of striking historic revival style homes in Beverly-Morgan Park.
- **11310 South Emerald Avenue** was built in 1927-28 for owner Stuart Colman. Note: the Individually Eligible category on page 2 of the inventory form says No when it should say Yes.

ADDITIONAL INDIVIDUAL PROPERTIES THAT MAY BE POTENTIALLY ELIGIBLE FOR THE NATIONAL REGISTER OF HISTORIC PLACES

The Ridge Historical Society would like the team to consider the following buildings for NR eligibility:

Roseland Auto Sales and Service Building (Allinone Auto Sales Building) 11200 South Halsted Street (Morgan Park)

Built 1927 for Henry T. Vollmer

Doerr, Lindquist and Doerr, architects

Potentially eligible under Criterion C for architecture as a rare remaining example of a garage and auto sales building from the early 20th-century in Morgan Park. Both Beverly-Morgan Park and Roseland were once major centers of auto sales on Chicago's south side, with dealerships along major area thoroughfares. Building is best known historically as a satellite salesroom for Roseland Auto Sales, featuring Studebakers. Additionally, Midland Terra Cotta Company provided the handsome terra cotta ornament for the one-story brick store building. Its integrity was likely questioned by its wood paneled storefront, but the original storefront may be behind the vertical boards. If not individually eligible, perhaps eligible as part of a multiple property listing (see below).

Bethany Reformed Church Manse

3 West 111th Place

Craftsman-style single family residence

Built 1923-24

Purchased by church and addition built in 1928

Potentially eligible under criterion B for its historic associations with Reverend Harry J. Hager, pastor of Bethany Reformed Church from 1929-1975. Hager was a pioneer in media evangelism in Chicago during the mid 20th-century through his Sunday radio ministry broadcasts on local stations WHIP and WCFL. This church-related residence in the Craftsman style retains a high degree of architectural integrity, including a Gothic Revival style entry porch that likely dates to Hager's residency.

K. A. Pridjian and Company Building

11600 South Halsted Street

Built 1960

Potentially eligible under Criterion A for its historic associations with longtime local business, K. A. Pridjian and Company, Rug Cleaning and Sales. Established in 1924 in Roseland, Pridjian first operated at 54 West 111th Street. Owner K. A. Pridjian (d. May 6, 1965) had the facility built specially for his rug operation. Building retains much of its integrity in its mid-century storefront design, materials, and signage. (side note: Almost everyone in Beverly-Morgan Park has their rugs cleaned by Pridjian!)

Roseland Community Hospital Nurses Home

11321 South Wentworth Avenue

Built 1923-24

E. Hall, architect.

Potentially eligible under Criterion C for its architecture as a rare remaining example of a unique education-related building type in Chicago, a hospital-affiliated nurses' home. The three-story brick, Roseland Community Hospital Nurses' Home provided housing and educational opportunities for women training in the nursing profession. The interior may still reflect dormitory rooms, classrooms, and other spaces essential for nurses' training during the early 20th-century. Not sure how many of these building types are left in Chicago, but might be one of the only on the south side.

Galloy and Van Etten Cut Stone Contractors Building

11756 South Halsted Street

Built over time – 1921, 1928, 1946 and 1950

Potentially eligible under Criteria C for its associations with the Van Etten family, prominent local builders on Chicago's south side. Galloy and Van Etten, a longtime cut stone contracting business near the Panhandle railroad tracks, has operated continuously at this site from at least 1909. The cut stone exterior of the buildings within the complex reflects its occupant's trade. Founder Abe Van Etten was the brother of Simon and Henry Van Etten, whose contracting firm known as Van Etten Brothers built monumental residences and religious buildings on the south side. Galloy and Van Etten likely provided the cut stone used in many of these buildings.

NR ELIGIBLE CONTIGUOUS HISTORIC DISTRICTS OR MULTIPLE PROPERTIES

The Ridge Historical Society urges the team to revisit any groupings of historic properties that may be potentially NR eligible as contiguous districts or as multiple property listings. The APE is located in a section on Chicago's south side that has been under surveyed in the past, and as a result, little data is available and very few historic resources have been proactively designated as local landmarks or listed in the National Register of Historic Places. Perhaps our community areas need a different approach in this type of study, especially when conducting cultural resource surveys. For example, surveyors could relax harsh integrity standards or look at broader patterns that might lead to multiple property nominations.

Here are some suggestions:

1. Would any of the Historic Residential Railroad Suburbs or Historic Streetcar Communities in the APE be NR eligible as multiple property listings? Since suburban development was extensive outside of nineteenth-century Chicago, perhaps the team could take a second look at the communities that were stimulated and developed along the area's railroads and streetcars in 19th-century Calumet Township and Chicago's early 20th-century neighborhoods. Especially important are those along the Chicago and Eastern Illinois, which came through in 1880-81 (UPRR APE); the Chicago and Great Eastern Railroad, an early subsidiary of the Pittsburgh, Cleveland, Chicago and St. Louis Railway who constructed tracks in 1865 (Halsted APE); and the Illinois Central Railroad who operated an east-west spur at 121st Street. Streetcars were operating along Michigan Avenue, 103rd Street, 111th Street, 115th Street and 119th Street, and stimulating residential and commercial development.

Properties Associated with the former suburban Village of Fernwood. Fernwood is now part of the Washington Heights community area and within the RHS service area.

Fernwood, a station stop on the Chicago and Eastern Indiana Railroad was first incorporated as a village in 1886 and annexed to the City of Chicago in Spring of 1891. Focused on a station at the 103rd Street crossing (then Tracy Avenue), Fernwood was mostly a residential district, with a few locally serving commercial buildings. Its boundaries ran from 90th Street on the north, 103rd Street on the south, Stewart Avenue on the East, and Morgan

and Halsted on the west. Developers E. L. Gillette and Henry L. Hill, along with S. Montgomery Smith, laid out Fernwood in 1883 for residential development with an adjacent public park, approximately 75 feet wide along the tracks from 99th Street to 103rd Street. This park, now known as Fernwood Parkway, played a significant role in the development of this railroad suburb. This landscape feature marks the importance of open space, trees, and grassy public space to a growing residential suburb. Within the APE, a number of frame homes on suburban size lots remain, particularly along Eggleston Avenue, representing this period of development. Yet, these residences may have integrity issues (see 10100 South Eggleston Avenue), and many of Fernwood's signature buildings are either outside of the APE (including churches and a public school) or have been demolished (such as the Fernwood Station and Gillette Hall).

2. **Historic automobile-related buildings along major thoroughfares, including service stations, garages and car sales dealerships.** In reviewing the inventory forms in the APE, the team recorded a large number of auto-related buildings, although not contiguous. Halsted Street and Michigan Avenue were both major thoroughfares for the area, and as stated above, both Beverly-Morgan Park and Roseland were once major centers of auto sales on Chicago's south side. Could these buildings be NR eligible as a multiple property nomination?
3. **Chicago Georgian and Raised Ranch Historic Districts.** Just like the Chicago Bungalow Multiple Property Listing and subsequent NR districts, perhaps a multiple property listing is imminent for neighborhoods of Chicago Georgians and Raised Ranches. Both are mid 20th-century vernacular types which evolved from the earlier designs and plans of the American Foursquare and Bungalow respectively. Rows of raised ranches (also known as Bungalow Ranches) are found in the Halsted APE.

GENERAL COMMENTS AND CORRECTIONS:

1. Usage of catch-all architectural styles and types. Most every building I reviewed was labeled vernacular. Architectural styles, when used, were inconsistent. Using catch all categories makes it quite difficult to sort, review and compare important architectural specimens. Upon request, I can provide corrections to architectural styles and types in the Washington Heights and Morgan Park community areas.
2. Historic and current functions and uses should match National Register categories.
3. Construction dates for historic buildings in the APE came from an unreliable source—Cook County Assessor lists. A better primary source, such as City of Chicago building permit records, should be used for those properties determined NR eligible. It is disappointing that the team did not conduct basic research on the very small number of buildings (9) determined eligible in the study under NR Criterion C for architecture. Construction dates, owners, architects and builders would surely add to the historic context and story.

4. 748 E. 103rd Street (Washington Heights) should be **748 W. 103rd Street**.
5. Noted Beverly-Morgan Park architect Murray Hetherington designed the Tudor Revival-style residence at **11001 South Green Street** (Morgan Park), built 1940-41. Although a handsome, small scale Tudor Revival house, strict integrity standards were applied by the team.

Please contact me with further questions.

Sincerely,

Jennifer R. Kenny

PREPARED BY: Rebecca Thompson

ISSUE DATE: June 6, 2014

Meeting called to order at 10:00 am CT

Objective: Red Line Extension Effects Meeting for Section 106 Consultation

Item No.	Item Description
1	<p>Welcome/Intro</p> <p>Mike Connelly welcomed attendees. JM reviewed the agenda and informed attendees that a public Open House is scheduled for May 13.</p>
2	<p>Review of Project and Previous Section 106 Tasks</p> <p>ST explained the overall purpose of the project and alternatives. JM provided an overview of the four-step Section 106 process, which is intended to assess project effects on historic resources (those previously identified as eligible for National Register of Historic Places [NRHP] listing). JM identified ground rules and reviewed previous coordination efforts undertaken to date as part of the Project.</p> <p>In response to comments received after the eligibility consultation in January 2013, Kensington Park was surveyed but was not recommended as eligible. Six potential historic districts were suggested; Green Street is recommended as eligible. Nine individual resources were suggested for reconsiderations. Of these, four resources are recommended as eligible based on supplemental information.</p>
3	<p>Overview of Alternatives</p> <p>JM presented an overview of the four alternatives that will be evaluated in the EIS: No Action, Bus Rapid Transit (BRT) along Michigan Avenue, the Union Pacific Railroad (UPRR) Rail Alternative, and the Halsted Rail Alternative.</p> <ul style="list-style-type: none"> - Q: Is the BRT park-and-ride lot on the north side of 130th Street? A: Yes. - Q: Why are the garages shown as three levels? As shown, it looks like a huge impact on Altgeld Gardens. A: Preliminary ridership analysis indicates park-and-ride demand, which is why we are proposing such large structures. As we fine tune the design moving forward, we'll re-evaluate the garage sizes and incorporate some urban design elements to mitigate the impact. - Q: How many properties would be removed along the Halsted route? A: We'll discuss this at the individual community meetings and Open House. The focus of this meeting is effects on historic resources. - Q: Are the piers for the Halsted line in the sidewalk or street? A: That will be determined in future engineering phases. The straddle bent piers could encroach into the parking lane. - Q: Would the Halsted piers have a similar placement to the structure at the Morgan/Lake? A: Halsted Street has two travel lanes and a parking lane in each direction and is wider than the configuration at Lake Street. The pier type chosen will make a difference on placement too. There could be impacts on parking spaces. <i>Follow up note: All traffic impacts would be covered in the Transportation section of the Draft EIS.</i> - Q: How high is the structure along Halsted? A: It varies – roughly 23-30 feet above ground level; the necessary height is determined based on the street clearance requirements. - Comment: In talking with business owners at Galloy & Van Etten Stone Contractors, they are worried about their large trucks being able to access their sites.
4	<p>Section 106 Effects on National Register of Historic Places Eligible Resources</p> <p>The team developed effects recommendations based on the conceptual alternatives described previously. JM stepped through each resource. The criteria for determining effects are defined in 36 CFR 800.5. For the three options of Union Pacific Railroad (UPRR) Alternative, the team examined the option that is closest to the historic resource, to represent the worst case analysis.</p> <ul style="list-style-type: none"> - Q: Will you be sending a copy of the slides? A: The Effects Report provides general information and distances and CTA will have additional

Item No.	Item Description
	<p>boards at the Open House, which will also be posted on CTA website. The effects slides contain preliminary deliberative materials so CTA will not be circulating copies.</p> <ul style="list-style-type: none"> - Comment: The Cottage/Bungalow District that Neighborhood Housing Services of Chicago (NHS) commented on in the eligibility comments shows up in the map near the Pump Station. - WM: How close is the East Option UPRR track structure to the Pumping Station? A: It is close and almost adjacent– we’ll have to look it up. <i>Follow-up note: Horizontally, it is about 8.8 feet between the pump station and track structure in the UPRR East Option. However this distance is based on conceptual engineering and can change slightly as additional detailed engineering is performed.</i> - Comment: If there is a future expansion along the UPRR line, we want to be sure that there is ample room to accommodate it. It would be good if the alternative were further from the building; I question whether it is actually a “No Effect” as shown. Response: It is a tight site at the Pumping Station. We are required to be outside of UPRR right-of-way. - Q: Does the analysis include staging areas as well? A: Yes. These are included in the footprints. - Q: How tall is the BRT garage by the Venetian Hall? A: 2 stories <i>Correction: it is 3 stories with some space for retail and community facilities at ground floor.</i> - Q: Are there any buildings in the footprint of the proposed garage? A: We looked at all the potential displacements associated with each alternative. There are no structures within the garage footprint that would be displaced. - Q: Is it a possibility to adopt/restore the Venetian Hall as part of the adjacent garage? Or incorporate similar elements in the garage design? A: If there is an adverse effect, we will try to mitigate that. We will look at improving the view of the garage and making it more street friendly. CTA can take this under consideration. - Q: NHS’ eligibility comments included the cast masonry structures, one of which appears immediately south of the Venetian Hall. What was the determination there? A: Those were determined non-eligible; several were surveyed and lacked integrity and/or distinguishing architectural features. There wasn’t a cohesive grouping either. - Q: What is the building across from the garage, next to Altgeld Gardens? A: There is a park; the buildings next to the park may be part of Golden Gate. - Q: What is the station like for UPRR at the west option? A: Trains stop, unload/load, and turn back. There is no yard or additional tracks at this location – the yard is proposed further north at 120th Street. - Comment: The garage could have a visual impact. Nothing else nearby is built at that scale/height. There may be an impact on the Altgeld Garden Historic District, which will likely gain historic significance into the future due to its association with President Obama. CTA should consider a more modest garage design. - Comment: Several parties would like to see a view of the West Terminal station option from directly across 130th Street at Altgeld. Response: Early communications with community members indicated a local preference for the South Station option, which would have an entrance south of 130th Street. - Comment: Both 130th UPRR station options need further study – there will be impacts to transportation, people’s homes, etc. <i>Follow-up note: All other impacts will be discussed in the Draft EIS.</i> - Q: How difficult is it to cross from the south station to Altgeld or Philip Homes? A: 130th Street is on a viaduct that allows the tracks and platforms to extend under 130th Street. You wouldn’t have to cross 130th Street to get to the Station, only a local street. - Q: Are the viaducts safe for travel?

Item No.	Item Description
	<p>A: Vehicles travel on the 130th Street viaduct today.</p> <ul style="list-style-type: none"> - Q: Will a station include CTA/CDOT landscaping improvements to link to Altgeld? A: Definitely. A study was conducted focusing on access and connectivity at 130th Street Station. CTA has coordinated and will continue to coordinate with CHA to integrate plans. - Comment: At the Green Street Historic District, track structure will certainly be visible and audible. - Q: What level of noise impacts are anticipated along Green Street? A: Noise mitigation measures (e.g. noise walls, closed deck, etc.) have been incorporated into preliminary designs to mitigate impacts. <i>Follow-up: Based on the general level noise analysis conducted per FTA guidance, the Green Street Historic District lies at the edge of the moderate noise impact zone, assuming the project includes 3-4 foot high noise barriers and a closed deck structure. Historic experts will reexamine potential effects on the Green Street Historic District.</i> - Comment: I think property owners who live within the Green Street Historic District would be adversely affected by the Halsted Alternative. Response: That will definitely be looked at as part of the National Environment Policy Act (NEPA) analysis. - Comment: As you look at this more, it would be nice to have a rendering showing how close the tracks are and what the relationship will look like between the Halsted line and Green Street district. - Comment: The former substation is city-owned and vacant. Consider incorporating it into the station. Maybe it could be an entry point. This provides a good opportunity to give back to the community by adopting some of the Chicago Historic Resources Survey Orange buildings, similar to measures at the Wilson station. - Comment: The French Eclectic House would experience the same impacts as Green Street. There are several nice homes within this block, possibly nicer than the resources along Green Street, though they lack the consistency of Green Street. Scale and noise will be issues. These areas could be negatively impacted, driving people to move out of the area. - Comment: Galloy and van Etten is a family business and has been in the area since 1899. Photos show the building dating to 1909; it is a huge resource for the area. The business owner feels like they would be so adversely affected by the Halsted Alternative that they would have to relocate. It is a fourth generation family-owned business and provides a lot of employment. They are also concerned about the proximity to the 119th Street yard. - Comment: A lot of businesses are within the 119th Street yard. It used to feed all of Roseland with jobs. Many of the buildings have been demolished but some are left and could be negatively impacted. Response: CTA is coordinating with Far South Community Development Corporation regarding potential impacts on businesses. - Comment: Several consulting parties requested renderings for the four adversely affected resources along Halsted. - Q: What about impacts on the rest of the cemetery? A: Only the gatehouse/entryway is considered eligible. Comment: The impacts on the cemetery will be assessed as part of NEPA analysis. - Q: Is the fire station within the rail yard still accessible? A: Yes. - Comment: By placing the tracks so close to the resource, are you precluding future viability of the resource to function? This is an issue at the fire station and the St. Peter & Paul Church in particular. TT: The fire station's current location isn't particularly viable as it is today. Perhaps relocating this building should be a consideration as part of mitigation, although we don't typically like to

Item No.	Item Description
	<p>move structures. The fire station would be more viable on an arterial. The trend city-wide has been to close a number of these smaller structures.</p> <ul style="list-style-type: none"> - Comment: We've heard some good ideas regarding mitigation, but there are a few steps between now and then. We still have to have a selected alternative before developing detailed mitigation measures.
5	<p>Schedule and Next Steps</p> <p>There is an open house next week. A Draft EIS is being prepared, which will include additional analyses and public involvement opportunities.</p> <ul style="list-style-type: none"> - Q: When would a single preferred alternative be selected? A: The Final EIS would be prepared on a single alternative. - Q: Is there a way to understand whether any of the resources we identified in the eligibility phase that were not determined eligible would be affected? A: They were not examined as part of this analysis since we evaluated only eligible buildings or districts for Effects determination. - Comment: Please resend the responses to eligibility comments.

Please notify ST of any corrections and/or clarifications to the minutes within five (5) business days.

cc: Attendees

Red Line Extension (RLE) Summary of Effects Comments received from the Consulting Parties and Responses from the Project Team

The following paragraphs briefly summarize comments received from the consulting parties regarding the project effects on historic resources for the RLE Project and corresponding responses from the project team. Under the Section 106 consultation process, the Chicago Transit Authority (CTA) undertook an extensive data collection and analysis effort during fall 2012 to identify historic resources located within the Area of Potential Effect (APE) for the three build alternatives that are under evaluation in the RLE Draft Environmental Impact Statement (EIS). This analysis culminated in recommendations regarding the potential eligibility of historic resources pursuant to the National Historic Preservation Act of 1966. These recommendations were presented to the ten consulting parties, including the Illinois Historic Preservation Agency (IHPA), during a meeting on January 30, 2013. Input from consulting parties was considered throughout 2013, resulting in 13 individual properties and two historic districts being identified as eligible under the National Register of Historic Places (NRHP) criteria.

Following this step in the consultation process, CTA undertook an analysis of effects on NRHP-eligible historic properties in accordance with criteria established in 36 CFR 800.5. This analysis culminated in recommendations regarding the potential effects on historic resources, which were mailed to consulting parties on April 18, 2014, requesting any written comments by May 23, 2014. An in-person meeting was conducted on May 8, 2014 to discuss these recommendations. Participants were asked to provide relevant information from their perspective that may supplement the effects recommendations summarized in the April 18 packet. Written comments were received from the following four organizations:

- Anne Haaker, Illinois Historic Preservation Agency (IHPA)
- Lisa DiChiera, Landmarks Illinois
- Matt Cole, Neighborhood Housing Services of Chicago
- Terry Tatum, City of Chicago, Department of Planning and Development, Historic Preservation Division

Comments and responses are presented by general topic below. Based on local knowledge and input from the consulting parties, additional analysis was undertaken regarding historic resources within the APE. The original recommendations presented in April/May 2014 will be revised as described below and presented in the RLE Draft EIS.

The CTA announced on August 10, 2014 that as part of its planning process to extend rail service to 130th Street on the far South Side, it has narrowed down the alternatives to two preliminary options for the proposed RLE Project. Based on feedback received from the public this spring and summer via community meetings and comments provided to the agency, the CTA is now focusing on one “preferred alternative” with two possible variations from the three build alternatives that have been under consideration. The CTA believes these options would best serve communities and residents on the Far South Side:

- ≠ Union Pacific Railroad Rail (UPRR) Alternative, East Option. Under this option, CTA tracks would be placed immediately east of the Union Pacific railroad right-of-way from 99th Street to 118th Street

- ≠ UPRR Alternative, West Option. Under this option, CTA tracks would be placed immediately west of Union Pacific's right-of-way from 99th Street to north of 118th Street.

The proposed alignment of the rapid transit line would be the same for the two East and West options north of 99th Street and south of 118th Street.

Eligibility Reconsideration Requests

1. Resurvey the grouping of Chicago bungalows and frame cottages at 103rd Street to 104th Place between the UPRR line and Princeton Avenue.

Nine resources (Chicago bungalows and frame cottages) were surveyed as part of the representative sample of surveys. Although the area contains numerous residences with similar architectural styles, massing, setbacks, and construction dates, architectural historians verified that these properties do not retain sufficient integrity for the NRHP as a district due to contemporary alterations (e.g., replacement siding, porches, windows, and doors). None were found to merit individual listing for the NRHP due to their integrity. Numerous vacant lots disrupt the visual cohesiveness of this area. Despite the general consistency in property types, the collection of bungalows and frame cottages is broadly representative of residential areas on the South Side, lacking the distinguishing elements to qualify as NRHP eligible. Please refer to forms 301, 306, 321, or 326 W 103rd Place; 262, 328, or 335 W 104th Place; or 310 or 325 W 104th Street on the Eligibility DVD provided to consulting parties on January 4, 2013 for specific examples.

2. Reconsider eligibility determinations for cast stone-faced residences adjacent to the UPRR right-of-way, including the property adjacent to the Venetian Hall.

The properties adjacent to the Venetian Hall are a brick two-flat (129 E Kensington Ave on southwest side) and a vinyl-clad multi-residence (141 E Kensington Ave on the east side). Neither building exhibits distinctive architectural features or sufficient integrity for inclusion on the NRHP. Likewise, the two cast stone-faced houses facing the Venetian Hall (122 and 136 E Kensington Ave) do not feature distinctive architectural elements or sufficient integrity for inclusion on the NRHP. Architectural historians verified that these properties do not retain sufficient integrity for the NRHP due to contemporary alterations (e.g., replacement porch, windows, and doors), compromising the historic materials and workmanship. No cohesive set of similar properties has been identified in the vicinity that would merit consideration as a potential historic district or multiple property grouping.

3. Reassess the area around 111th Street at Emerald Avenue for a potential district.

CTA has narrowed down the alternatives for the RLE Project and the Halsted Alternative is no longer being pursued. The area around 111th Street at Emerald Avenue is distant from the UPRR Alternative corridor and would not be affected by the RLE Project.

Effects Reconsideration Requests

4. Reevaluate the visual, noise, and economic effects of the Halsted Alternative on the Green Street Historic District, which could have a significant impact on the quality of life without proper mitigation.

CTA has narrowed down the alternatives for the RLE Project and the Halsted Alternative is no longer being pursued. The Green Street Historic District is distant from the UPRR Alternative

corridor and would not be affected by the RLE Project.

5. Reassess No Effect finding for the Altgeld Gardens Historic District based on the UPRR Alternative. The proposed station and garage would alter the landscape; a rendering should be developed.

Altgeld Gardens Historic District is eligible for NRHP listing under Criterion A (i.e., events that have made a significant contribution to the broad patterns of American history on a local, state, and/or national level) based on its association with community development, planning, and social history. As defined by 36 CFR 800.5, an adverse effect on this resource would be an “alteration to the characteristics of a historic property qualifying it for inclusion in or eligibility for the NRHP.” While the UPRR Rail Alternative would increase transportation choices and improve access for this geographically isolated area, none of the proposed infrastructure improvements in the vicinity would significantly alter the characteristics that qualify the district as eligible for NRHP listing. As part of the UPRR Rail Alternative, an at-grade station and parking facilities would be constructed in one of two locations to provide access to the Altgeld Gardens Housing Project: a South Station Option or a West Station Option. Either station location option is separated from Altgeld Gardens Historic District by a multi-lane street (i.e., E. 130th Street and/or E. 130th Place). Preliminary plans for each terminal station option would include parking for 2,300 vehicles through a combination of a parking structure and surface parking lots.

The South Station Option parking structure for the UPRR 130th Street Station is approximately 800 feet from Altgeld Gardens Historic District at its closest point; the parking structure would not be visible from within the historic district and would not adversely affect the historic district.

The West Station Option parking structure for the UPRR 130th Street Station is approximately 400 feet from Altgeld Gardens Historic District at its closest point and would only be visible from the outer line of buildings on the north side of the Altgeld Gardens development. This outer row of buildings would obstruct the view of the parking structure from interior buildings and streets. The construction of the West Station Option would not adversely affect the characteristics that qualify the district as eligible for NRHP listing, i.e. its association with community development, planning, and social history.

As the project would not adversely affect the integrity of the district or its association with community development, planning, and social history, any visual simulation rendering and any appropriate mitigation measures identified would occur independent of the formal Section 106 consultation process for this resource.

The UPRR Alternative has been selected as the National Environmental Policy Act (NEPA) Preferred Alternative, and an additional rendering of the station will be developed and presented as part of the Draft EIS to assist local stakeholders in understanding the extent of visual impacts created by the project.

6. Reassess No Effect finding for the Roseland Pumping Station based on the UPRR Alternative. For the UPRR East Option, the track structure is approximately 8.8 feet from the side of the building at its nearest point. It should be noted that an existing at-grade freight line runs in close proximity to this location. The pumping station would not be displaced or directly affected by the UPRR Rail Alternative. The changes in the setting (e.g., visual, noise, vibration, etc.) would

not adversely affect the characteristics that qualify the resource as eligible for NRHP listing, i.e. its architecture.

The UPRR West Option would also not affect the characteristics that qualify the resource as eligible for NRHP listing.

7. CTA should develop appropriate renderings for all properties in the APE where there was a finding of No Adverse Effect or Adverse Effect.
CTA will develop additional visual simulation renderings, for inclusion in the Draft EIS, of the UPRR Alternative, which has been selected as the NEPA Preferred Alternative. Renderings are particularly helpful in understanding the extent of visual impacts and in developing appropriate mitigation measures for any adversely affected historic resources.

At the current stage of Effects consultation, additional renderings would not change the effects findings for NRHP-eligible resources. Justification for effects findings was provided in the effects report mailed to consulting parties and additional justification is included in this document. As a reminder, the key consideration is whether the project would alter the specific characteristics that qualify a resource as eligible for the NRHP.

In addition to the Historic impacts, the Draft EIS will also include a discussion of the potential visual impacts of the RLE Project alternatives, including general renderings of the alternatives that were prepared to assess those impacts. Some of those renderings were also presented at the May 13th CTA open house and the exhibit boards can be viewed at http://www.transitchicago.com/assets/1/red_ahead/MS_CWC_CL_RLE_Exhibit_Boards_lowres_FINAL_20140515.pdf

8. Renderings should be developed for any NRHP or Chicago Historic Resources Survey (CHRS) Orange properties potentially impacted by the close proximity of the proposed elevated track structures.
See Response #7.
9. The property owner of the Galloy and Van Etten Stone Contractors business is concerned about their access and viability if the Halsted Alternative is built.
CTA has narrowed down the alternatives for the RLE Project and the Halsted Alternative is no longer being pursued. The Galloy and Van Etten Stone Contractors business is distant from the UPRR Alternative corridor and would not be impacted.
10. Noise studies should be undertaken to demonstrate that the introduction of the elevated rail structure on Halsted would not adversely affect historic resources within the APE of that route.
CTA has narrowed down the alternatives for the RLE Project and the Halsted Alternative is no longer being pursued. Noise analysis has been conducted per Federal Transit Administration (FTA) guidance and mitigation measures have been identified, which will be presented in the Draft EIS.
11. The French Eclectic House would experience the same impacts as Green Street. Scale and noise would be issues. These areas could be negatively impacted, driving people to move out of the area.

CTA has narrowed down the alternatives for the RLE Project and the Halsted Alternative is no longer being pursued. The French Eclectic House is distant from the UPRR Alternative corridor and would not be affected by the RLE Project.

Other Comments

12. In general, we [IHPA] concur with the findings concerning historic architectural resources presented in the draft report. The Bus Rapid Transit (BRT) Alternative would have the least impacts, followed by the UPRR Alternative.
13. The potential to encounter archaeological resources needs to be addressed. If the potential for undisturbed archaeological resources exists, a survey will be required.
No previously recorded archaeological sites fall within the RLE APE and therefore the project would produce no effect on known archaeological resources. The need for and extent of further archaeological investigations will be determined in consultation with IHPA.
14. CTA should consider incorporating the city-owned, vacant historic substation (10227 S. Halsted Street) into plans for the nearby station.
CTA has narrowed down the alternatives for the RLE Project and the Halsted Alternative is no longer being pursued; the vacant historic substation would not be affected by the RLE Project.

Cook County

Chicago

Red Line Extension

From Existing 95th Street Station to Approximately 130th St. and Halsted St.

IHPA Log #001010713

May 22, 2014

Sonali Tandon

Chicago Transit Authority

567 W. Lake St.

Chicago, IL 60661-1498

Dear Ms. Tandon:

Thank you for requesting comments from our office concerning the possible effects of the referenced project on cultural resources. Our comments are required by Section 106 of the National Historic Preservation Act of 1966, as amended, and its implementing regulations, 36 CFR 800: "Protection of Historic Properties".

We are in receipt of the 2014 *Draft Effects Report*, and appreciated the opportunity to participate in the May 8, 2014 meeting at the CTA where your findings were presented. In general we concur with the findings concerning historic architectural resources presented in the draft report. However, the report indicates that noise walls will reduce the amount of noise that resources such as the proposed Green Street Historic District will experience. Noise studies that include current conditions will need to be undertaken to demonstrate that the introduction of the elevated rail structure on Halstead will not adversely affect historic resources located within the APE of that route.

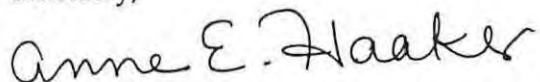

It was noted in the report that archaeological resources may be uncovered during construction activities and that they would be investigated once found. At a minimum, the potential to encounter archaeological resources needs to be addressed and the results need to be presented to this office for review. If the potential for undisturbed archaeological resources exists within the areas of potential effect, a survey will be required.

As previously stated, it is our opinion that the proposed BRT route will affect the least amount of cultural resources located within its APE. We also believe the UPRR route that is often adjacent to existing railroad tracks will affect fewer resources than the elevated line proposed on Halsted Street.

We look forward to reviewing the final historic resources report once the preferred alternative has been selected and all cultural resource surveys have been completed.

If you have questions please contact David J. Halpin, Cultural Resources Manager, at 217-785-4998.

Sincerely,

A handwritten signature in black ink that reads "Anne E. Haaker". The signature is fluid and cursive, with the first name "Anne" and last name "Haaker" clearly legible, and "E." in the middle.

Anne E. Haaker

RE: Red Line Extension – Potential Effects Consultation Comments

Dear Ms. Tandon,

Thank you for the opportunity to review on May 8th the Red Line Extension team's findings and recommendations regarding historic properties in the APE. We are pleased to see some additions made to the list of National Register-eligible properties and the identification of orange-rated buildings in the Chicago Historic Resources Survey (CHRS) based on our February 18, 2013 letter.

From the May 8th meeting, we have the following comments:

- We strongly recommend that better renderings are produced to illustrate the potential impact of a UPRR West Station and four-story parking garage on 130th Street and the adjacent Altgeld Gardens Historic District.
- We agree with comments made during the meeting that the "No Effect" determination made for the Roseland Pumping Station, 351 W. 104th St., and Altgeld Gardens Housing Project Historic District, under the UPRR Rail scenario, should be reassessed as potentially having an "Adverse Effect" determination.
- We recommend producing renderings that will illustrate the "Adverse Effect" on National Register-eligible properties in the Halsted Rail scenario. This is particularly important if the proximity of rail tracks could potentially make these properties less viable in the future. These properties include:
 - The Former Classic Revival Substation, 10227 S. Halsted St.
 - The S.S. Peter & Paul Catholic Church at 12433-12439 S. Halsted St.
 - Cedar Park Cemetery Entryway and Gatehouse, 12540 S. Halsted St.
 - Fire Department Engine Company 115, 931 W. 120th St.
- While we understand that the design phase of a Halsted Rail scenario, if selected, will be some time later, we would like consideration to be made of incorporating the city-owned and vacant historic substation at 10227 S. Halsted St. into plans for a station that was indicated would be built in that vicinity.
- Lastly, we support the reassessments suggested by Matt Cole of Neighborhood Housing Services in his May 14, 2014 letter.

Again, thank you for the opportunity to review the findings by your team for this project.

Sincerely,

Lisa DiChiera
Director of Advocacy

RE: Red Line Extension – Potential Impacts to National Register Eligible Properties in APE

Dear Ms. Tandon,

Thank you again for inviting NHS to participate in the Section 106 review process for the Red Line Extension project. We believe that extending the Red Line will ultimately enhance the livability and well-being of the greater Roseland-area. At the same time, as an organization rooted in the use of asset-based community development strategies, we wish to ensure that the project minimizes any undue impacts on the existing residential, community, and historic buildings that make these neighborhoods great and that our experience has shown can be important community-building and engagement assets. Therefore, based on the information presented in the May 9th Effects Meeting, we recommend that the following additional actions be undertaken by the project team before any mitigation planning is undertaken:

- Develop appropriate and assessable renderings for all properties in the APE where there was a finding of No Adverse Effect or Adverse Effect. This currently includes the Former Venetian Hall, the Green Street Historic District, the Former Classical Revival Substation, Galloy and Van Etten Stone Contractors, S.S. Peter & Paul Catholic Church, Cedar Park Cemetery Entryway and Gatehouse, and Fire Department Engine Company 115. We also believe that such renderings should be created, as necessary, based on our recommendations below (e.g, re: Altgeld Garden Historic District).
- Re-Survey 103rd Street to 104th Place between the UPRR and Princeton Avenue: This area includes the previously identified, National Register-eligible Roseland Pumping Station and Roseland Fire Station properties. However, the blocks also include a largely intact and well-maintained grouping of Chicago bungalows and frame cottages. We would encourage the project team re-survey these blocks to determine if these residential properties could contribute to a future National Register district, as well as any potential impact that a UPRR-located elevated train line would have on such a district.
- Reassess Determination that Cast Stone-faced Residences in APE are not National Register Eligible: Several of these buildings, which look similar to Chicago Greystones and are relatively rare, were observed adjacent to the UPRR right-of-way. This includes the 2-flat on Kensington Avenue immediately east of the Former Venetian Hall.
- Reassess Finding of No Adverse Effect on Potential Green Street Historic District: Re-evaluate visual, noise, and economic effects of a Halsted-located elevated train line on homes along Green

Street. While such train lines do run through other residential areas of Chicago (e.g., Pink Line), this corridor would be new and could have a significant impact on the quality of life of the area without proper mitigation.

- Reassess Area Around 111th Street and Emerald Avenue for Potential Historic District: Re-survey area around 11310 South Emerald (Emerald, Union, and Wallace Avenues) for eligibility as a historic district. If determined eligible, assess effect of a Halsted-located elevated train line on the district.
- Reassess Finding of No Effect of a UPRR West Station on Altgeld Gardens Historic District: The proposed station, station house, and four-story parking garage would be located immediately to the north of Altgeld Gardens. The height of the parking garage would be taller than any other properties in the area and would likely loom above the landscaped tree line of 130th Street. The existing rendering of the proposed station developed by project team is inadequate to assess the effect of the station due to its oblique view from the west.

Thank you again for inviting NHS to participate in the Section 106 review for the Red Line Extension project. Please let us know if we can be of further assistance before the next scheduled consultation.

Best,

Matt Cole

Subject: Red Line Extension Historic Properties Consultation

Dear Ms. Tandon,

Thank you for hosting the consulting parties meeting held at CTA headquarters on May 8, 2014 for the Red Line Extension Historic Properties Consultation. We appreciate the opportunity to comment on the draft effects to historic properties that were discussed at that meeting.

Based on information provided, our comments are as follows:

1. Properties determined to be historic and/or color coded orange in the Chicago Historic Resources Survey and that would be potentially impacted by close proximity of elevated tracks under any of the alternative routes being considered should have photo renderings executed to show the effect of such close proximity of tracks. This would mainly include properties along the Halsted St. alternative, but would also include the UPRR east alternative route as it would affect the Roseland Pumping Station.

Our office looks forward to continuing to work with you on this exciting undertaking.

Sincerely,

Terry Tatum
