Attachment A - Environmental Data Resources Report

Section 1 Introduction

The Chicago Transit Authority (CTA), a project sponsor to the Federal Transit Administration (FTA), proposes to construct the Red-Purple Bypass Project. The project would include construction of a fifth track bypass just north of Belmont station where the CTA rail system Red, Purple, and Brown line tracks converge at an existing flat junction. Improvements as part of this project would also reconstruct approximately 0.3 mile of the mainline Red and Purple line tracks from Belmont station on the north to the segment of track between Newport and Cornelia Avenues on the south.

This technical memorandum discusses the potential for encountering hazardous materials during project construction and implementation. Hazardous materials may include petroleum products, pesticides, organic compounds, heavy metals, asbestos-containing materials, lead paint, or other compounds that could harm human health or the environment. The nature and extent of contamination can vary widely; early detection, evaluation, and determination of appropriate remediation of hazardous materials, such as those discussed in this EA, are essential to avoid or minimize the potential for hazardous material impacts from the project.

Two alternatives are under consideration: the No Build Alternative and the Build Alternative.

1.1 No Build Alternative

The No Build Alternative is a required alternative as part of the NEPA environmental analysis and is used for comparison purposes to assess the relative benefits and impacts of implementing the Red-Purple Bypass Project. The No Build Alternative would maintain the status quo, and would not expand system capacity.

The No Build Alternative represents future conditions if the Red-Purple Bypass Project were not implemented. The alternative would include typical repairs to the existing flat junction and the associated mainline tracks based on historic funding levels needed to keep the lines functional. Capital expenditures would be minor compared to the Build Alternative. Functional improvements under the No Build Alternative would be insufficient to respond to ridership demand, and would not modernize the system. Some expenditure would be made to keep the system operating; however, service quality and effective capacity would decline over time, and maintenance costs would rise due to continued aging of the infrastructure. The No Build Alternative would not involve substantial changes to the existing infrastructure or major construction activities. Travel times would likely continue to increase and service reliability would continue to degrade in order to safely operate on deteriorating infrastructure.

1.2 Build Alternative

The Build Alternative consists of constructing a fifth track bypass for the northbound Brown Line and reconstructing approximately 0.3 mile of the mainline Red and Purple line tracks from

Belmont station on the south to the segment of track between Newport and Cornelia Avenues on the north. The improvements would address current and increased ridership demands, decrease travel times, raise overall system reliability and safety, reduce noise levels, and provide a modern track structure with a renewed useful life of 60 to 80 years while supporting future growth and development in the project area and beyond. **Figure 1-1** provides a map of the project limits.

1.2.1 Fifth Track Bypass

Currently, northbound Brown Line trains must cross the north- and southbound Red Line tracks and the southbound Purple Line track at Clark Junction. This flat junction configuration causes signal delays because Red, Purple, and Brown line trains must wait for each other to pass through the junction before proceeding. The Build Alternative would provide a grade-separated junction allowing northbound Brown Line trains to cross unimpeded over and above the other tracks on a new aerial structure, resulting in increased capacity to all three lines while also improving travel time and overall system reliability and safety. A new track would be built to the east of the existing tracks, ramp up, and curve westward over the mainline tracks to merge onto the existing Brown Line track elevated structure just west of Sheffield Avenue. Based on conceptual engineering, the bypass track is expected to rise approximately 40 to 45 feet above the existing ground level (up to 22 feet above the existing tracks) at its highest point. Figure 1-2 shows a picture of the existing four-track system at Belmont station facing north and an artistic conceptual rendering of the proposed bypass.

Figure 1-1: Red-Purple Bypass Project Limits

Figure 1-2: Photo and Artistic Conceptual Rendering of Proposed Red-Purple Bypass, Facing North from Belmont Station

1.2.2 Mainline Track

The existing mainline tracks are directly underneath the location of the proposed bypass. These tracks date back to the turn of the 20th century and have not been fully replaced since this time.

The existing track geometry north of Clark Junction requires Red and Purple line trains on all four tracks to maneuver through two short-radius curves between School Street and Newport Avenue, partly beneath the location of the proposed new bypass tracks. These short-radius curves restrict train speeds; increase travel time, noise levels, and rail wear; and reduce passenger comfort with undesirable side-to-side movements. As part of the Red-Purple Bypass Project, these existing short-radius curves would be realigned to eliminate unnecessary speed restrictions, improving

train speeds, travel time, and ride quality. If not improved, these speed-restricted curves would limit speeds for the Red and Purple lines even after the flat junction capacity constraint is removed. The existing open-deck, steel structure with jointed rail, which is over 115 years old, would be modernized from Belmont station on the south to the segment of track between Newport and Cornelia Avenues on the north. The modernized track structure would be wider than the existing track structure to meet modern design standards, including provisions for worker safety. To minimize noise and vibration impacts from faster and more frequent trains, the proposed structure would use a closed-deck aerial structure with direct-fixation track and welded rail. Noise barriers (approximately 3 to 5 feet in height) are proposed on both sides of the track deck for the full length of the project limits to reduce noise transmission at and below track level. At specific locations special trackwork, signals, signal equipment, and relay houses would be included.

The project would be constructed with minimal service disruptions. Improvements in the area would lead to several building displacements in the vicinity to accommodate permanent right-of-way and construction needs. Portions of the land acquired for permanent right-of-way would be needed for the final track realignment; the remainder of property would become available for potential redevelopment after construction.

Section 2 Regulatory Framework and Methodology

2.1 Regulatory Framework

Federal and state laws have been established for the protection of human health and the environment. At the federal level, the regulations include the following: the Resource Conservation and Recovery Act (RCRA); the Comprehensive Environmental Response, Compensation, and Liability Act; the Superfund Amendments and Reauthorization Act; the Clean Air Act; the Toxic Substances Control Act; and the Federal Occupational Safety and Health Act. At the state level, regulations and programs include: the Illinois Environmental Protection Act and the Illinois Occupational Safety and Health Program, with oversight by the Office of the State Fire Marshal. Locally, the City of Chicago Police Department, City of Chicago Fire Department and Department of Public Health regulate and oversee issues related to hazardous material.

2.1.1 Methodology

A review of federal, state, and local regulatory databases was conducted by Environmental Data Resources, Inc. (EDR) to identify sites that currently or have historically handled, stored, transported, released, or disposed of hazardous or regulated materials, as these types of sites are potential sources of hazardous material contamination. In addition, historical Sanborn® fire insurance maps, topographic and aerial maps, and other sources were reviewed for the analysis (EDR 2012a, HIG 2012b, HIG 2012c).

Specific sites within ¼ mile of the project alignment, where hazardous materials are known or suspected to exist were evaluated for the potential for hazardous materials to be present. Each site was assigned a level of concern based on the following criteria:

- **High Concern** Sites with known/probable soil, groundwater, or soil gas contamination that have not been remediated, or where remediation was incomplete or undocumented. Other considerations include the type and mobility of any contamination, distance to the project, and groundwater impacts.
- **Moderate Concern** Sites with known/potential soil, groundwater, or soil gas contamination and where remediation is in progress or was completed with restrictions in place, or contaminants do not appear to pose a concern for the project. Sites may also be considered a Moderate Concern based on the type and intensity of former land use (e.g., chemical manufacturers, machine shops, gas stations), even if they did not otherwise have an environmental database listing.
- Low Concern Sites where hazardous materials or petroleum products may have been or are stored, but where there is no known contamination associated with the property based on all available information. They may include hazardous material generator sites, sites with

permitted air toxic emissions or sites with spills or leaks that were subsequently remediated and are no longer a concern.

Polychlorinated biphenyls, lead-based paint, and asbestos-containing material are likely to occur in transformers and buildings constructed before 1978-1979. The evaluation of potential impacts associated with these hazardous materials determined whether transformers and buildings potentially constructed before 1978-1979 were present.

Section 3 Existing Conditions

3.1 Historic Document Review

<u>Topographic Maps</u> - Historic United States Geologic Survey topographic maps obtained from Historical Information Gatherers, Inc. (HIG) were reviewed (HIG 2012a, HIG 2012b). The maps are not generally at a scale that permits identification of individual sites of concern but they do show general land use over time. The density of streets increased considerably between 1889 and 1929, after which development was primarily limited to isolated areas throughout the project area. The rail line currently used by the North Red and Purple lines is first depicted on the topographic maps starting in 1929.

<u>Aerial Photographs</u> – Historic aerial photographs obtained from HIG (HIG 2012c) were reviewed for the years 1938, 1947, 1952, 1962, 1972–74, 1983, 1994, 2005 and 2009. Like the topographic maps, the aerials are not generally at a scale that permits identification of potential impacts associated with specific sites, but they do provide information on changes in land use and development over time. The 1938 aerial photograph showed that the majority of project area was already developed by then. Historical land use with the area of potential impact appears to be a mix of residential and commercial, with areas of industrial use between.

<u>Certified Sanborn* Maps</u> - Environmental Data Resources Inc. (EDR) provided historic Certified Sanborn* fire insurance maps for the year 1894, 1905, 1950, and 1975 (EDR 2012a). The review identified coal yards, gas stations, auto repair shops, and manufacturing facilities throughout the project area. These are all activities and sources typical of an urban setting.

3.2 Regulated Site Review

EDR conducted a search of federal, state, and local environmental regulatory databases on February 13, 2012 to identify potential sites of concern within ½ mile of the project limits (EDR 2012b). An updated search within the Red-Purple Bypass Project limits was done on July 7, 2014 (EDR 2014). Using the impact analysis criteria described above, CTA reviewed the sites identified by EDR and classified them as High, Moderate, or Low Concern based on their potential to act as a source of contamination to the project. In addition, the list of orphan sites (sites reported as potentially being within ¼ mile of the project limits, but which could not be mapped due to inadequate or incomplete address information) was reviewed and when possible, classified. The review identified no High Concern and four Moderate Concern sites. All sites not identified as High or Moderate concern were classified as Low Concern. See **Table 3-1** and **Figure 3-1**.

Table 3-1: Summary of Moderate Concern Sites

EDR Map ID¹	Listed Name	Site Address	Databases ^{2,3}
C9	CTA Belmont Station and Construction Site	945-949 W. Belmont Avenue	UST (exempt from registration), RCRA-CESQG
C14	Belmont Station Expansion	3206 N. Wilton Avenue	UST (removed)
G30, G31	Sheffield and School Development	3301 N. Sheffield Avenue	LUST (NFR), UST (exempt from registration)
J47	SBC Q11320 and Illinois Bell Telephone Company D/B/A SBC Illinois	3532 N. Sheffield Avenue	SRP (Focused NFR with groundwater use restriction), INST CONTROL, ENG CONTROL

¹Unless otherwise noted, EDR Map ID is the site ID number provided in the 2012 or 2014 EDR database report included in Appendix C-6. More than one site has the same ID and each site may have more than one ID. Orphan sites were given a Map ID by EDR.

² The Databases listed are those that contributed to the site's designation as a Moderate Concern site.

³ Database definitions: CESQG = Conditionally Exempt Small Quantity Generator; ENG CONTROL = Engineering Control; INST CONTROL = Institutional Control; LUST = Leaking Underground Storage Tank; NFR = No Further Remediation; RCRA = Resource Conservation and Recovery Act; SRP = Site Remediation Program; UST = underground storage tank

Figure 3-1: Identified Hazardous Materials Sites of Concern

Two Underground Storage Tank (UST) sites were classified as Moderate Concern due to their location within the current right-of-way. The two sites are CTA-owned property, with a 2,000 gallon heating oil UST that was removed in 2006 (EDR Map ID C14), and a 1,500 gallon heating oil UST identified as currently in use. Belmont station (EDR Map ID C9) is also listed as a RCRA Conditionally Exempt Small Quantity Generator meaning they generate or store a very small amount of hazardous materials onsite. The other two Moderate Concern sites were classified due their proximity to the project (adjacent) and listing as a UST and Leaking Underground Storage Tank site or Site Remediation Program site with restrictions. EDR Map ID G30/G31 is listed as previously containing a 110-gallon gasoline UST, exempt from registration; this property is also listed as a Leaking Underground Storage Tank and has received a No Further Remediation letter from IEPA, indicating that remediation is considered complete. EDR Map ID J47 is a former industrial or commercial site; it has received a No Further Remediation letter from IEPA with legal or administrative restrictions on land use and/or other activities to limit exposure to contamination.

3.3 Other Sources

Given the urban setting of the Red-Purple Bypass Project, the potential exists for the presence of typical urban fill throughout the entire project area. Typical urban fill normally contains elevated concentrations of polynuclear aromatic hydrocarbons and metals, which are present due to the urban setting that includes nearby roadways, railways, and industrial and commercial land uses. This type of contamination is not necessarily associated with a release from a specific site or source. Urban fill may also include building demolition debris, which was commonly used as fill material in excavations.

Section 4 Environmental Impacts

The following summarizes the potential impacts from hazardous materials for the No Build and Build Alternatives.

4.1 No Build Alternative

No adverse construction or permanent impacts related to hazardous materials would occur as part of the No Build Alternative. Construction activities associated with the No Build Alternative, such as routine maintenance, could encounter and/or generate hazardous materials such as paints, solvents, fuels, and hydraulic fluids that may be accidentally released during construction. Adherence to federal, state, and local regulations would avoid and minimize any construction-related impacts associated with the No Build Alternative.

Potential benefits of remediation associated with the Build Alternative would not occur with the No Build Alternative. The Red, Purple, and Brown lines would continue operating under the No Build Alternative, and transit operation has the potential to result in the release of hazardous materials and/or petroleum products into the environment from accidental spills. Spills would most likely occur during activities such as equipment and grounds maintenance. Materials typically used for these activities include fuel, oil, paints, solvents, cleaning agents, herbicides, and pesticides. There would be no changes in the existing types, usage, storage, or transport of hazardous materials during operation of the No Build Alternative and existing procedures are already in place to address the proper storage and handling of hazardous materials during operations.

4.2 Build Alternative

4.2.1 Construction

Construction impacts relate primarily to the potential to encounter soil and/or groundwater containing hazardous materials during construction. The new closed-deck structure and track construction would require subsurface excavation throughout the majority of the project area. There is the potential to encounter hazardous materials, whether from the sites identified in the database review, from the presence of urban fill, or from the existing rail corridor, which may have been previously contaminated. In addition, if groundwater is encountered during construction, there is the potential that it may contain hazardous materials as well. Moderate Concern sites are the greatest potential sources of hazardous material impacts.

One Moderate Concern site has been identified within the construction area (C-14), to be located between Belmont Avenue and Aldine Avenue. Although subsurface work is not expected in the construction area, there is the potential to disturb the soil and encounter hazardous materials.

The Build Alternative would include demolition of existing structures, including properties acquired for acquisition, which were constructed before 1978 and 1979. The structures potentially include asbestos-containing material and lead-based paint that could result in a release of asbestos fibers and lead dust during construction. There is also the potential for hazardous materials involved with construction activities, such as paints, solvents, fuels and hydraulic fluids, to be accidentally released during construction.

4.2.2 Permanent

The project could result in benefits through the cleanup and/or removal of contaminated material (soil, groundwater and/or asbestos and lead-based paint particles) during construction. Existing procedures are already in place to address the proper storage and handling of hazardous materials during operations.

Section 5 Measures to Avoid or Minimize Harm

Federal, state, and local laws and regulations regarding hazardous materials would be followed before and during construction. The following BMPs, at a minimum, would be implemented before and during construction to avoid and minimize the potential for impacts before and during construction:

- Phase I Environmental Site Assessments (ESAs) would be conducted for any property to be purchased as part of the Build Alternative in order to identify recognized environmental conditions and assess and limit environmental liability. Phase I ESAs would be completed to evaluate the presence of contamination and to develop appropriate measures to deal with hazardous materials during construction. Based on the Phase I ESA findings, a Phase II ESA could also be required before purchasing a property.
- Focused site assessments would be required for areas where earthmoving activities would occur and on properties purchased for the project. The assessments would include characterization and evaluation of the potential for encountering hazardous materials and contaminated soils.
- Asbestos, lead-based paint, and hazardous material surveys of buildings or structures would be required before reconstruction or demolition of any property, including CTA-owned properties or structures, to identify any asbestos, lead-based paint particles, and hazardous materials, such as polychlorinated biphenyl or mercury-containing equipment. Any hazardous materials identified would be abated and disposed of in accordance with federal, state, and local regulations.

The following specific and required plans would be developed before construction to further minimize or avoid the potential for hazardous material impacts:

- A Contaminated Material Management Plan that provides the procedures for identifying, characterizing, managing, storing, and disposing of contaminated soil and groundwater encountered during construction activities would be required. The plan would cover the entire project area, as it is assumed that all material has at least some level of contamination associated with it.
- Spill Control and Prevention Plans to address the use, storage, and disposal of materials such as asphalt, fuel, paint, solvents, and cleaning agents would be required. The Spill Control and Prevention Plans would provide BMPs to limit the potential for accidental releases of potentially hazardous materials.

- Construction Stormwater Pollution Control Plans, which describe methods to prevent or minimize stormwater runoff from encountering contaminated soil or other hazardous materials, would be required.
- Health and Safety Plans for construction activities would be developed by the construction contractors and approved by CTA before starting any work. The Health and Safety Plans would identify potential contaminants of concern, required personal protective equipment and procedures, and emergency response procedures.

Finally, during operation, CTA would adhere to all applicable federal, state, and local regulations, as well as existing system-wide hazardous material usage, storage, and disposal plans and procedures, further minimizing the potential for hazardous material impacts.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

The Map ID column refers to the Map ID-Focus Map(s) of the listed site.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 02/25/2011 has revealed that there is 1 CERC-NFRAP site within the searched area.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 06/15/2011 has revealed that there are 53 RCRA-CESQG sites within the searched area.

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 06/15/2011 has revealed that there are 34 RCRA-NonGen sites within the searched area.

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, and dated 10/19/2006 has revealed that there are 18 HIST FTTS sites within the searched area.

STATE AND LOCAL RECORDS

IL UIC: Injection wells are used for disposal of fluids by "injection" into the subsurface. The construction of injection wells range from very technical designs with twenty-four hour monitoring to simply a hole dug in the ground to control runoff. As a result of this diversity, the UIC Program divides injection wells into five different classes.

A review of the IL UIC list, as provided by EDR, and dated 12/15/2011 has revealed that there are 3 IL UIC sites within the searched area.

IL NPDES: A listing of facilities currently active in the state. The types of permits are public, private, federal and state.

A review of the IL NPDES list, as provided by EDR, and dated 07/12/2011 has revealed that there is 1 IL NPDES site within the searched area.

Site	Address	Map ID
SOLID WASTE AGENCY COOK CO	2100 RIDGE AVE	21-4

IL NIPC: NIPC is an inventory of active and inactive solid waste disposal sites, based on state, local government and historical archive data. Included are numerous sites that previously had never been identified largely because, prior to 1971, there was no obligation to register such sites. The data come from the Northeastern Illinois Planning Commission's Solid Waste Landfill Inventory.

A review of the IL NIPC list, as provided by EDR, and dated 08/01/1988 has revealed that there are 2 IL NIPC sites within the searched area.

IL LUST TRUST: In case sufficient funds are not available in the Underground Storage Tank Fund, requests for payment are entered on the Payment Priority List by "queue date" order. As required by the Environmental Protection Act, the queue date is the date that a complete request for partial or final payment was received by the Agency. The queue date is "officially" confirmed at the end of the payment review process when a Final Decision Letter is sent to the site owner.

A review of the IL LUST TRUST list, as provided by EDR, and dated 11/16/2011 has revealed that there are 3 IL LUST TRUST sites within the searched area.

IL HWAR: Each year, Illinois hazardous-waste generators tell the Illinois EPA the amounts and kinds of hazardous waste they produced during the previous year. Generators indicate by code the types of wastes produced and the steps they took to manage these wastes. If some or all of these wastes were sent to commercial treatment, storage, and disposal facilities (TSDFs), that information and the identity of each receiving facility also are submitted. Illinois TSDFs likewise report the types and quantities of wastes received from in-state and out-of-state generators; they also report the procedures they used to manage these wastes.

A review of the IL HWAR list, as provided by EDR, and dated 12/31/2009 has revealed that there are 351 IL HWAR sites within the searched area.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used

whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there are 2 Manufactured Gas Plants sites within the searched area.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Registry ID: 110001344732

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D000
Waste name: Not Defined

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS

NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE

OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

Environmental Interest/Information System

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

Hazardous Waste Summary:

Waste code: D001

IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF Waste name:

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System

ACES (Illinois - Agency Compliance And Enforcement System) is the

Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

and treat, store, or dispose of hazardous waste, RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

program stan to track the nothication, permit, compliance, an

corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F00

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING:

TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED

FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED

IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE

SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F002

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE,

METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE,

CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND

1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND

SPENT SOLVENT MIXTURES.

Waste code: F003

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL

ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL

ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT
MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT
NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS
CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED
SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR
MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL
BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT

MIXTURES.

Waste code: F005

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL

KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE,

2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF

THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F00

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING:

TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED

FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED

IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE

SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F002

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE,

METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE,

CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND

1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND

SPENT SOLVENT MIXTURES.

Waste code: F003

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL

ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL

ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT
MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT
NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS
CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED
SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR
MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL
BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT

MIXTURES.

Waste code: F005

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL

KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE,

2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF

THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001

IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF Waste name:

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET,

INTL CLEANERS (Continued)

1001116378

WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCES (National Center for Education Statistics) is the primary federal entity for collecting and analyzing data related to education in the United States and other nations and the institute of education sciences.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

D001 Waste code:

IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF Waste name:

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET. WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

D002 Waste code:

A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS Waste name:

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

D008 Waste code: **LEAD** Waste name:

D009 Waste code: Waste name: **MERCURY**

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Handler Activities Summary:

U.S. importer of hazardous waste: No Mixed waste (haz. and radioactive): No Recycler of hazardous waste: No Transporter of hazardous waste: No Treater, storer or disposer of HW: No Underground injection activity: No On-site burner exemption: No Furnace exemption: No Used oil fuel burner: No Used oil processor: No User oil refiner: Nο Used oil fuel marketer to burner: No Used oil Specification marketer: No Used oil transfer facility: No Used oil transporter: No

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET,

AMOCO, IRVING & BROADWAY (Continued)

1000613357

WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

Hazardous Waste Summary:

Waste code: D001

IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF Waste name:

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Hazardous Waste Summary:

Waste code: D001

IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF Waste name:

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET,

EUROPEAN AND U S CAR SVC (Continued)

1004692579

WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D006
Waste name: CADMIUM

Waste code: D008 Waste name: LEAD

Waste code: D018
Waste name: BENZENE

Waste code: D035

Waste name: METHYL ETHYL KETONE

Waste code: D039

Waste name: TETRACHLOROETHYLENE

Waste code: D040

Waste name: TRICHLOROETHYLENE

Violation Status: No violations found

FINDS:

Registry ID: 110005804576

Environmental Interest/Information System

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F001

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING:

TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED

FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED

IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE

SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F002

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE,

METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE,

CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND

1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005. AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND

SPENT SOLVENT MIXTURES.

Waste code: F003

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL

ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL

ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT

MIXTURES.

Waste code: F005

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL

KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE,

2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS

DUBIN RESIDENTIAL CORP (Continued)

1001112197

CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Hazardous Waste Summary:

Waste code: D000
Waste name: Not Defined

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F003

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL

 ${\tt ACETATE}, {\tt ETHYL} \ {\tt BENZENE}, \ {\tt ETHYL} \ {\tt ETHER}, \ {\tt METHYL} \ {\tt ISOBUTYL} \ {\tt KETONE}, \ {\tt N-BUTYL}$

ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT

MIXTURES.

Waste code: F005

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL

KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE,

2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF

THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F001

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING:

TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED

FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED

IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE

SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F002

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE,

 ${\tt METHYLENE~CHLORIDE,~TRICHLOROETHYLENE,~1,1,1-TRICHLOROETHANE,}\\$

CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND

1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING,

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

US Geographic Names Information System (GNIS) is the official vehicle for geographic names used by the federal government and the source for applying geographic names to federal maps and other printed and electronic documents.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

NCES (National Center for Education Statistics) is the primary federal entity for collecting and analyzing data related to education in the United States and other nations and the institute of education sciences.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Conditionally Exempt Small Quantity Generator

Description: Handler: generates 100 kg or less of hazardous waste per calendar

month, and accumulates 1000 kg or less of hazardous waste at any time; or generates 1 kg or less of acutely hazardous waste per calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from

the cleanup of a spill, into or on any land or water, of acutely

hazardous waste

Owner/Operator Summary:

Owner/operator name: GERBER ALLEN PRES
Owner/operator address: 8250 SKOKIE BLVD
SKOKIE, IL 60077

Owner/operator country: Not reported
Owner/operator telephone: (708) 296-0555

Legal status: Private
Owner/Operator Type: Owner
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No Mixed waste (haz. and radioactive): No Recycler of hazardous waste: No Transporter of hazardous waste: No Treater, storer or disposer of HW: No Underground injection activity: No On-site burner exemption: No Furnace exemption: No Used oil fuel burner: No Used oil processor: No

GERBER AUTO REBUILDERS INC (Continued)

User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:

Waste code: F003

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL

 ${\tt ACETATE}, {\tt ETHYL} \ {\tt BENZENE}, \ {\tt ETHYL} \ {\tt ETHER}, \ {\tt METHYL} \ {\tt ISOBUTYL} \ {\tt KETONE}, \ {\tt N-BUTYL}$

ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT
MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT
NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS
CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED
SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR
MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL
BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT

MIXTURES.

Waste code: F005

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL

KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE,

2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF

THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

ACES (Illinois - Agency Compliance And Enforcement System) is the

Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Hazardous Waste Summary:

Waste code: D000
Waste name: Not Defined

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F002

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE,

METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE,

CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND

1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND

SPENT SOLVENT MIXTURES.

Waste code: F003

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL

ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL

ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT

MIXTURES.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D008 Waste name: LEAD

Violation Status: No violations found

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F003

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL

ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL

ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT

MIXTURES.

Waste code: F005

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL

KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE,

2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF

THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Classification: Conditionally Exempt Small Quantity Generator

Description: Handler: generates 100 kg or less of hazardous waste per calendar

month, and accumulates 1000 kg or less of hazardous waste at any time; or generates 1 kg or less of acutely hazardous waste per calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or

other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from

the cleanup of a spill, into or on any land or water, of acutely

hazardous waste

ZENEX CORP CHEMICAL PROD DIV Facility name:

Classification: Large Quantity Generator

Hazardous Waste Summary:

D002 Waste code:

A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS Waste name:

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

F006 Waste code:

WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT Waste name:

FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF

ALUMINUM.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Registry ID: 110005956741

Environmental Interest/Information System

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Databases Searched and Update Dates

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/30/2011 Date Data Arrived at EDR: 07/12/2011

Next Scheduled EDR Contact: 04/23/2012 Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 06/30/2011 Date Data Arrived at EDR: 07/12/2011

Next Scheduled EDR Contact: 04/23/2012 Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991 Date Data Arrived at EDR: 02/02/1994 Date Made Active in Reports: 03/30/1994

Number of Days to Update: 56

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/25/2011 Date Data Arrived at EDR: 03/01/2011 Date Made Active in Reports: 05/02/2011

Source: EPA

Telephone: 703-412-9810 Last EDR Contact: 11/29/2011

Next Scheduled EDR Contact: 03/12/2012 Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/15/2011 Date Data Arrived at EDR: 07/07/2011 Date Made Active in Reports: 08/08/2011

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/15/2011 Date Data Arrived at EDR: 07/07/2011 Date Made Active in Reports: 08/08/2011

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UIC: Underground Injection Wells

Injection wells are used for disposal of fluids by "injection" into the subsurface. The construction of injection wells range from very technical designs with twenty-four hour monitoring to simply a hole dug in the ground to control runoff. As a result of this diversity, the UIC Program divides injection wells into five different classes.

LF SPECIAL WASTE: Special Waste Site List

These landfills, as of January 1, 1990, accept non-hazardous special waste pursuant to the Illinois EPA Non-Hazardous Special Waste Definition. List A includes landfills that may receive any non-hazardous waste, Non-Regional Pollution Control Facilities are so noted. List B includes landfills designed to receive specific non-hazardous wastes. List B landfills are designated as a Regional Pollution Control Facility by RPCF, or Non-Regional Pollution Control Facility by Non-RPCF.

LUST TRUST: Underground Storage Tank Fund Payment Prioirty List

In case sufficient funds are not available in the Underground Storage Tank Fund, requests for payment are entered on the Payment Priority List by "queue date" order. As required by the Environmental Protection Act, the queue date is the date that a complete request for partial or final payment was received by the Agency. The queue date is "officially" confirmed at the end of the payment review process when a Final Decision Letter is sent to the site owner.

HWAR: Hazard Waste Annual Report

Each year, Illinois hazardous-waste generators tell the Illinois EPA the amounts and kinds of hazardous waste they produced during the previous year. Generators indicate by code the types of wastes produced and the steps they took to manage these wastes. If some or all of these wastes were sent to commercial treatment, storage, and disposal facilities (TSDFs), that information and the identity of each receiving facility also are submitted. Illinois TSDFs likewise report the types and quantities of wastes received from in-state and out-of-state generators; they also report the procedures they used to manage these wastes.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

WI MANIFEST: Manifest Information

Hazardous waste manifest information.

Date of Government Version: 12/31/2010 Date Data Arrived at EDR: 08/19/2011 Date Made Active in Reports: 09/15/2011

Number of Days to Update: 27

Source: Department of Natural Resources

Telephone: N/A

Last EDR Contact: 12/19/2011

Next Scheduled EDR Contact: 04/02/2012 Data Release Frequency: Annually

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services,

a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary

and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are

comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Homes & Centers Listing

Source: Department of Children & Family Services

Telephone: 312-814-4150

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting

the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/11/2014 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
CRAFTSMAN PLATING & TINNING CO	1239 W SCHOOL ST	WSW 1/8 - 1/4 (0.228 mi.)	174	132

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 13 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State and tribal landfill and/or solid waste disposal site lists

IL NIPC: NIPC is an inventory of active and inactive solid waste disposal sites, based on state, local government and historical archive data. Included are numerous sites that previously had never been identified largely because, prior to 1971, there was no obligation to register such sites. The data come from the Northeastern Illinois Planning Commission's Solid Waste Landfill Inventory.

A review of the IL NIPC list, as provided by EDR, and dated 08/01/1988 has revealed that there is 1 IL NIPC site within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/11/2014 has revealed that

there are 5 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 43 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 79 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F001

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING:

TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1.1.1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED

FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F001

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING:

TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED

FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED

IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE

SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F002

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE,

METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE,

CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND

1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND

SPENT SOLVENT MIXTURES.

Waste code: F003

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL

ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL

ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT

MIXTURES.

Waste code: F005

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL

KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE,

2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004: AND STILL BOTTOMS FROM THE RECOVERY OF

THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001

IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF Waste name:

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

ACES (Illinois - Agency Compliance And Enforcement System) is the

Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D006
Waste name: CADMIUM

Waste code: D008 Waste name: LEAD

Waste code: D018

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D008 Waste name: LEAD

Waste code: F006

Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT

FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM;

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal Brownfields sites

BROWNFIELDS: Municipal Brownfields Redevelopment Grant Program Project Descriptions

The Illinois Municipal Brownfields Redevelopment Grant Program (MBRGP) offers grants worth a maximum of \$240,000 each to municipalities to assist in site investigation activities, development of cleanup objectives, and performance of cleanup activities. Brownfields are abandoned or underused industrial and/or commercial properties that are contaminated (or thought to be contaminated) and have an active potential for redevelopment.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HWAR: Hazard Waste Annual Report

Each year, Illinois hazardous-waste generators tell the Illinois EPA the amounts and kinds of hazardous waste they produced during the previous year. Generators indicate by code the types of wastes produced and the steps they took to manage these wastes. If some or all of these wastes were sent to commercial treatment, storage, and disposal facilities (TSDFs), that information and the identity of each receiving facility also are submitted. Illinois TSDFs likewise report the types and quantities of wastes received from in-state and out-of-state generators; they also report the procedures they used to manage these wastes.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Elevation: 600 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map: 41087-H6 CHICAGO LOOP, IL

Most Recent Revision: 1997

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

FEMA Flood Electronic Data

YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

	LOCATION	GENERAL DIRECTION
MAP ID	FROM TP	GROUNDWATER FLOW
1	1/4 - 1/2 Mile NE	NNE
3	1/2 - 1 Mile ESE	Not Reported
4	1/2 - 1 Mile North	E
6	1/2 - 1 Mile SSE	E
7	1/2 - 1 Mile SE	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOLOGIC AGE IDENTIFICATION

Era: Paleozoic Category: Stratifed Sequence

System: Silurian

Series: Middle Silurian (Niagoaran)

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBANLAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Bedrock Max: > 0 inches

Soil Layer Information							
Boundary Classification							
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	60 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: fine sand

fine sandy loam silty clay loam loamy fine sand

Surficial Soil Types: fine sand

fine sandy loam silty clay loam loamy fine sand

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: sand

fine sand loamy sand silty clay loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

Section 1 Introduction

The Chicago Transit Authority (CTA), as project sponsor to the Federal Transit Administration (FTA), proposes to construct a fifth track bypass just north of Belmont station where the CTA rail system Red, Purple, and Brown line tracks converge at an existing flat junction. Improvements as part of this project would also reconstruct approximately 0.3 mile of the mainline Red and Purple line tracks from Belmont station on the south to the segment of track between Newport and Cornelia Avenues on the north.

Environmental Justice (EJ) is the "fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies" (USEPA 2004). This memorandum describes the potential impacts of the Red-Purple Bypass Project with regard to

1.1 Alternatives Considered

Two alternatives are under consideration: the No Build Alternative and the Build Alternative.

1.1.1 No Build Alternative

The No Build Alternative is a required alternative as part of the NEPA environmental analysis and is used for comparison purposes to assess the relative benefits and impacts of implementing the Red-Purple Bypass Project. The No Build Alternative would maintain the status quo, and would not expand system capacity.

The No Build Alternative represents future conditions if the Red-Purple Bypass Project were not implemented. The alternative would include typical repairs to the existing flat junction and the associated mainline tracks based on historic funding levels needed to keep the lines functional. Capital expenditures would be minor compared to the Build Alternative. Functional improvements under the No Build Alternative would be insufficient to respond to ridership demand, and would not modernize the system. Some expenditure would be made to keep the system operating; however, service quality and effective capacity would decline over time, and maintenance costs would rise due to continued aging of the infrastructure. The No Build Alternative would not involve substantial changes to the existing infrastructure or major construction activities. Travel times would likely continue to increase and service reliability would continue to degrade in order to safely operate on deteriorating infrastructure.

1.1.2 Build Alternative

The Build Alternative consists of constructing a fifth track bypass for the northbound Brown Line and reconstructing approximately 0.3 mile of the mainline Red and Purple line tracks from Belmont station on the south to the segment of track between Newport and Cornelia Avenues on

RED-PURPLE BYPASS PROJECT ENVIRONMENTAL JUSTICE TECHNICAL MEMORANDUM

the north. The improvements would address current and increased ridership demands, decrease travel times, raise overall system reliability and safety, reduce noise levels, and provide a modern track structure with a renewed useful life of 60 to 80 years while supporting future growth and development in the project area and beyond. **Figure 1-1** provides a map of the project limits.

1.1.2.1 Fifth Track Bypass

Currently, northbound Brown Line trains must cross the north- and southbound Red Line tracks and the southbound Purple Line track at Clark Junction. This flat junction configuration causes signal delays because Red, Purple, and Brown line trains must wait for each other to pass through the junction before proceeding. The Build Alternative would provide a grade-separated junction allowing northbound Brown Line trains to cross unimpeded over and above the other tracks on a new aerial structure, resulting in increased capacity to all three lines while also improving travel time and overall system reliability and safety. A new track would be built to the east of the existing tracks, ramp up, and curve westward over the mainline tracks to merge onto the existing Brown Line track elevated structure just west of Sheffield Avenue. Based on conceptual engineering, the bypass track is expected to rise approximately 40 to 45 feet above the existing ground level (up to 22 feet above the existing tracks) at its highest point. Figure 1-2 shows a picture of the existing four-track system at Belmont station facing north and an artistic conceptual rendering of the proposed bypass.

Figure 1-1: Red-Purple Bypass Project Limits

Figure 1-2: Photo and Artistic Conceptual Rendering of Proposed Red-Purple Bypass, Facing North from Belmont Station

1.1.2.2 Mainline Track

The existing mainline tracks are directly underneath the location of the proposed bypass. These tracks date back to the turn of the 20th century and have not been fully replaced since this time.

The existing track geometry north of Clark Junction requires Red and Purple line trains on all four tracks to maneuver through two short-radius curves between School Street and Newport Avenue, partly beneath the location of the proposed new bypass tracks. These short-radius curves restrict train speeds; increase travel time, noise levels, and rail wear; and reduce passenger comfort with undesirable side-to-side movements. As part of the Red-Purple Bypass Project, these existing short-radius curves would be realigned to eliminate unnecessary speed restrictions, improving

train speeds, travel time, and ride quality. If not improved, these speed-restricted curves would limit speeds for the Red and Purple lines even after the flat junction capacity constraint is removed. The existing open-deck, steel structure with jointed rail, which is over 115 years old, would be modernized from Belmont station on the south to the segment of track between Newport and Cornelia Avenues on the north. The modernized track structure would be wider than the existing track structure to meet modern design standards, including provisions for worker safety. To minimize noise and vibration impacts from faster and more frequent trains, the proposed structure would use a closed-deck aerial structure with direct-fixation track and welded rail. Noise barriers (approximately 3 to 5 feet in height) are proposed on both sides of the track deck for the full length of the project limits to reduce noise transmission at and below track level. At specific locations special trackwork, signals, signal equipment, and relay houses would be included.

The project would be constructed with limited service disruptions. Improvements in the area would lead to several building displacements in the vicinity to accommodate permanent right-of-way and construction needs. Portions of the land acquired for permanent right-of-way would be needed for the final track realignment; the remainder of property would become available for potential redevelopment after construction.

1.2 Summary of this Analysis

This technical memorandum analyzes the potential impacts of the Red-Purple Bypass Project on EJ populations, as well as people with disabilities. An EJ population is defined as minority and low-income by federal regulations, and includes elderly by Illinois statute (see **Section 2.1** for Regulatory Framework). Information about people with disabilities is also taken into account. Based on the analysis of data collected by the U.S. Census Bureau and confirmed by field investigations, the project area is racially and ethnically diverse and is home to people of varying incomes and of all ages.

The intent of this analysis is to determine whether EJ populations would experience adverse impacts disproportionately to non-EJ populations. A series of technical analyses have been completed to support the development of the Red-Purple Bypass Project EA. The technical analyses were used to identify adverse impacts that may be experienced by EJ populations, including property displacements, transportation impacts, noise and vibration impacts, neighborhood and community impacts, and visual and aesthetic impacts. No other technical analyses prepared for the Red-Purple Bypass Project EA identified any impacts on EJ populations.

While the analysis indicated some small concentrations of low-income or minority populations, no distinct EJ populations were identified based on the analysis. EJ populations would not experience disproportionately high or adverse human health or environmental impacts from any of the proposed alternatives. Overall, non-EJ populations would experience more impacts than EJ populations would within the Red-Purple Bypass Project area. In addition, a number of transit and accessibility benefits would be afforded through the Build Alternative. While these benefits would be realized by all populations, including EJ populations, improved travel time, access,

RED-PURPLE BYPASS PROJECT ENVIRONMENTAL JUSTICE TECHNICAL MEMORANDUM

infrastructure improvements, and associated safety would likely be more important to passengers who may be disabled or elderly and who may have limited travel options.

In addition to an evaluation of whether EJ populations would experience a greater burden compared to non-EJ populations, meaningful opportunities for engagement must be made for EJ populations. Outreach activities began in 2009, when four public meetings were held as part of the RPM vision study. In addition, four public meetings were held in early 2011 as part of scoping, and two public meetings were held in early 2012. CTA has coordinated with elected officials, stakeholders, and community groups and EJ populations since 2009.

Section 2 Methods for Impact Evaluation

This section describes several laws that require consideration of the impacts of federal actions on EJ populations. Partially based on Title VI, which addresses rights of minority populations, EJ regulations address low-income people in addition to minority populations. Both Title VI and EJ regulations are integrated into the procedures of NEPA. The elderly are also considered as a protected class pursuant to the State of Illinois' *Environmental Justice Act*.

2.1 Regulatory Framework 2.1.1 Federal

Originating from Executive Order (EO) 12898, Federal Action to Address Environmental Justice in Minority Populations and Low-income Populations issued by President Clinton on February 4, 1994, EJ requires each federal agency "to make achieving EJ part of its mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of its programs, policies, and activities on minority and low-income populations" (Federal Register, Volume 59, No. 32, 7629–7633, February 16, 1994). In the memorandum to agency department heads that accompanied the EO, President Clinton specifically recognized the importance of NEPA procedures for identifying and addressing EJ concerns. The memorandum states that "each federal agency shall analyze the environmental effects, including human health, economic, and social effects, of federal actions including effects on minority and low-income communities, when such analysis is required by NEPA." The memorandum also calls out the importance of NEPA's public participation process, by directing each federal agency to "provide opportunities for community input in the NEPA process, identify potential effects and mitigation measures in consultation with affected communities, and improve the accessibility of meetings, crucial documents, and notices" (Council on Environmental Quality (CEQ) 1997).

On August 11, 2000, President Clinton issued EO 13166, *Improving Access to Services for Persons with Limited English Proficiency* to help ensure that all people have access to meaningful communications about and participation in any program or activity receiving federal assistance. It requires federal agencies to examine the services they provide for people who, as a result of national origin, have LEP. It calls for agencies to identify whether LEP populations are in need of their services and to develop and implement a system to provide those services so LEP people can have meaningful access to them.

On May 2, 2012, the U.S. Department of Transportation (USDOT) issued Order 5610.2, *Order to Address Environmental Justice in Minority Populations and Low-income Populations* in compliance with EO 12898. The order reaffirms USDOT's commitment to EJ guiding principles:

 Avoid, minimize, or mitigate disproportionately high and adverse human health and environmental effects, including social and economic effects, on low-income populations and minority populations.

- Ensure the full and fair participation by all potentially affected communities in the transportation decision-making process.
- Prevent the denial of, reduction in, or significant delay in the receipt of benefits by low-income and minority populations.

Federal agencies are required to address disproportionately high and adverse human health or environmental impacts in all USDOT programs, policies and activities. It requires that EJ principles be fully considered throughout the planning and decision-making processes using the "principles of NEPA, Title VI, the *Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970*, as amended, the *Intermodal Surface Transportation Efficiency Act of 1991* and other USDOT statutes, regulations and guidance that address or affect infrastructure planning and decision-making; social, economic, or environmental matters; public health; and public involvement."

On September 29, 2011, the FTA proposed circulars for EJ and Title VI regulatory requirements. On July 17, 2012, USDOT issued the final Circular 4703.1 *Environmental Justice Policy Guidance for Federal Transit Administration*. On October 1, 2012, USDOT issued the final Circular 4702.1B *Title VI Requirements and Guidelines for Federal Transit Administration Recipients*. While there is some overlap between the two legislative requirements, there are distinct differences that the EJ circular clarifies.

In addition to race, ethnicity, national origin, and income, special protection against discrimination is also afforded to all people of the United States based on age. The *Age Discrimination Act of 1975* provides that age cannot be used as a means to exclude people from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving federal assistance (§ 6102).

The methods suggested in these guidance documents were used to develop the methods for this analysis.

2.1.2 State

Article XI of the Constitution of the State of Illinois (Article XI) establishes the legislative responsibility of the State "to provide and maintain a healthful environment for the benefit of this and future generations," and provides each person with the individual right to a "healthful environment" (Illinois General Assembly, Constitution of the State of Illinois).

The *Environmental Justice Act* enacted on August 16, 2011 established a Commission on Environmental Justice (Commission) in the State of Illinois. The Commission is charged with advising State entities on EJ issues, reviewing and analyzing current State laws and policies, and recommending options to rectify EJ concerns. The *Environmental Justice Act* ensures that no segment of the population in the State of Illinois, "regardless of race, national origin, age, or income, should bear disproportionately high or adverse impacts of environmental pollution."

2.1.3 Local

Local agencies are subject to the above federal and state laws, as applicable. Cook County and the City of Chicago do not have additional regulatory requirements pertaining to EJ.

2.2 Impact Analysis Definitions

The analysis for both temporary construction and permanent impacts takes into account direct adverse impacts and indirect or cumulative adverse impacts on EJ populations based on the following factors:

- Direct impacts would be permanent, result from implementation of the proposed project, and occur at the same time and place (40 CFR 1508.8). A direct impact distance of 375 feet was applied in determining whether EJ or non-EJ populations would experience disproportionate high and environmental or adverse health impacts. This distance was applied based on expected direct impacts from construction and implementation of this project in an existing urban transportation corridor.
- Indirect impacts would be those caused by the project or plan, but which are separated from direct impacts by time and/or distance and include induced growth and related environmental impacts, such as changes to land use patterns, population density or growth rates, and related impacts on air quality, water and other natural systems. Cumulative impacts would be those that result from the incremental impact of the proposed project when added to other past, present, and reasonably foreseeable future actions, regardless of what agency or person undertakes such other actions (40 CFR 1508.67). The area assessed for potential indirect or cumulative impacts on EJ populations affected by the project was an area within ½ mile of the alignment. The potential mobility impacts or benefits of the proposed project and other planned projects are likely to be experienced by all people who live, work, and/or recreate within ½ mile of the stations, which is generally considered to be a walkable distance.

2.2.1 Minority Populations

FTA defines a minority population as any readily identifiable group or groups of minority persons who live in geographic proximity, and if circumstances warrant, geographically dispersed or transient persons such as migrant workers or Native Americans who would be similarly affected by a proposed project. Minority includes persons who are American Indian/Alaska Native, Asian, Black/African American, Hispanic/Latino, and Native Hawaiian and other Pacific Islander.

Based on existing guidance from the CEQ and the U.S. Environmental Protection Agency, a "minority population may be present where either: (a) the minority population of the affected area exceeds 50 percent, or (b) if the minority population percentage in the affected area is meaningfully greater than the minority population percentage in the general population or other appropriate unit of geographic analysis" (CEQ 1997).

In identifying EJ populations, FTA Circular 4703.1, *Environmental Justice Policy Guidance for Federal Transit Administration*, suggests that reasonable efforts be made to "identify the presence

of distinct minority and/or low-income communities residing both within, and in close proximity to the proposed project or activity and to identify those minority and/or low-income groups who use or are dependent upon the natural resources that could be potentially affected by the proposed action." In order to achieve this, FTA suggests that "non-traditional data gathering techniques, such as outreach to community-based organizations early in the screening process, is the best approach for identifying distinct minority and/or low-income community within the study area." This analysis used 2012 Census data to identify minority populations. Field observation and specialized EJ outreach were used to further verify the presence of distinct minority populations.

2.2.2 Low-Income Populations

FTA defines a low-income person as one whose household income is at or below the Department of Health and Human Services (DHHS) poverty guidelines. A low-income population is any readily identifiable group of low-income persons who live in geographic proximity, and, if circumstances warrant, geographically dispersed/transient populations (such as migrant workers or Native Americans) who would be similarly affected by a proposed project. For the purposes of this analysis, the FTA criteria are satisfied by identifying areas where the percentage of households with median income below the DHHS poverty guidelines. Census data analysis was supplemented by field visits to confirm findings.

The DHHS poverty guidelines for are shown in **Table 2-1**. Year 2012 poverty guidelines are adjusted in the table to year 2010 to ensure comparability with year 2010 census data.

Table 2-1: U.S. Department of Human Health and Services 2012 Poverty Guidelines

Persons in Household	2012 Poverty Guideline (2012 dollars)	Adjusted Poverty Guideline (2010 dollars)
1	\$11,170	\$10,586
2	\$15,130	\$14,339
3	\$19,090	\$18,092
4	\$23,050	\$21,845
5	\$27,010	\$25,598
6	\$30,970	\$29,351
7	\$34,930	\$33,104
8	\$38,890	\$36,857

Source: U.S. Department of Human Health and Services 2012, Bureau of Labor Statistics 2012

2.2.3 Elderly Populations

A 50 percent threshold was used to identify distinct elderly populations for review in accordance with the State of Illinois *Environmental Justice Act* and confirmed through field observation. Information on elderly populations was overlaid onto the federally protected low-income and

minority community areas. Along most of the project corridor, locations where majority elderly populations reside are also home for minority and/or low-income populations.

2.2.4 Disabled Populations

Disability statistics were compiled at the block group level to include individuals with a sensory, physical, or mental disability or other condition that limits activities of daily living and compared to city-wide averages. Information about disabled populations was overlaid onto the federally protected low-income and minority community areas.

Section 3 Existing Conditions

This section describes the existing demographic profile of the population residing within ½ mile of the project alignment and includes race and ethnicity, income and poverty, age, and people with disabilities.

Note about data sources: As of 2010, the U.S. Census Bureau no longer provides certain data (such as income and poverty data) in the decennial Census; the U.S. Census Bureau instead reports this data in its ACS products. As such, total population numbers may differ between tables in this technical memorandum. This analysis uses the 2008-2012 ACS data, which are estimates based on samples.

3.1 Race and Ethnicity

The U.S. Census Bureau collects race and ethnicity are collected as two independent categories. The combination of non-white races and Hispanic/Latino populations is used to determine the minority population in the project area as described in **Section 2.2**.

There are 36,792 people living within ½ mile of the project area. The most prevalent race is white (79.9 percent). Hispanic or Latino populations can be of any race including white and they make up 7.9 percent of the total population. Of the total population living within ½ mile of the project area, minority persons, who include all non-white races and white Hispanics/Latinos, make up 20.1 percent (see **Table 3-1**). **Figure 3-1** shows the distribution of the minority population throughout the project area and **Attachment A** provides the tabular data at the Census block group level.

RED-PURPLE BYPASS PROJECT ENVIRONMENTAL JUSTICE TECHNICAL MEMORANDUM

Table 3-1: Race by Hispanic or Latino Origin within $\frac{1}{2}$ mile of Alignment

Population by Type	Total Population	Percent of Total Population
Total Population	36,792	100.0%
Not Hispanic or Latino	33,877	92.1%
White alone	29,381	79.9%
Black or African American alone	1,415	3.8%
American Indian and Alaska Native alone	51	0.1%
Asian alone	2,098	5.7%
Native Hawaiian and Other Pacific Islander alone	8	0.0%
Some other race alone	34	0.1%
Two or more races	889	2.4%
Hispanic or Latino	2,915	7.9%
White alone	2,285	6.2%
Black or African American alone	33	0.1%
American Indian and Alaska Native alone	21	0.1%
Asian alone	0	0.0%
Native Hawaiian and Other Pacific Islander alone	4	0.0%
Some other race alone	534	1.5%
Two or more races	38	0.1%
SUMMARY		
Minority (Non-White)	7,411	20.1%
Non-minority (White, Not Hispanic or Latino)	29,381	79.9%

Source: U.S. Census Bureau 2012a, 2012b

Figure 3-1: Percent Minority

There are no concentrations of minority groups within the area of direct effect of the project. There are, however, two minority block groups north of the project area were identified. These block groups were found to be similar in composition to the adjacent block groups with regard to income, education, and age. Like the population near the Belmont station, the population in these areas consists mainly of younger, post-college workers living in areas with high rental availability and do not represent an EJ community of concern. The predominant race leading to the minority population in these block groups is African American and limited English proficiency groups are not concentrated in these block groups.

North of the project area near Sheridan Road, there is a block group in which 49.7 percent of the population is aged 20–34. North and east of the project area, between Addison Street and Waveland Avenue, there is a block group where 51.2 percent of the population is aged 20–34. Approximately 47 percent of the block group population near Sheridan station has a Bachelor's or Master's Degree, and approximately 40 percent of the population between Addison Street and Waveland Avenue has the same education level (versus 29.3 percent citywide). The area has a large concentration of affordable rental locations that make the area attractive for younger, transient populations. The presence of some higher rates of minority populations within these block groups is representative of the ethnic diversity found within the City of Chicago.

3.2 Income and Poverty

As with race and ethnicity, there is also a wide range of incomes within ½ mile of the project alignment. **Table 3-2** provides a breakdown of the 2010 household incomes within ½ mile of the project alignment. **Figure 3-2** shows the distribution of the low-income population throughout the project area.

Table 3-2: Population by Ratio of Poverty Status

Ratio of Income to	Within ½ Mile of	Project Alignment	City of	Chicago
Poverty Level	Total	Percent of Total Population	Total	Percent of Total Population
Total Population	36701	100.0%	2,655,432	100.0%
Under 0.50	2,824	7.7%	269,396	10.1%
0.50 to 0.99	2,205	6.0%	318,411	12.0%
1.00 to 1.24	773	2.1%	157,238	5.9%
1.25 to 1.49	825	2.2%	151,079	5.7%
1.50 to 1.84	1,985	5.4%	190,820	7.2%
1.85 to 1.99	496	1.4%	74,436	2.8%
2.00 and over	27,593	75.2%	1,494,052	56.3%
SUMMARY				
Low-Income	5,029	13.7%	587,807	22.1%
Non-Low-Income	31,672	86.3%	2,067,625	77.9%

Source: U.S. Census Bureau 2012c

Based on the DHHS poverty guidelines, 13.7 percent of the population lives in a household with an income that is below the poverty level. This percentage is lower than the citywide percentage of 22.1 percent.

Within the area of direct impacts (within 375 feet of the project alignment), one low-income block near Belmont station was identified; 29.1 percent of the population in this block group is low-income, compared to the citywide average of 22.1 percent. While this block group contains people who earn slightly lower wages than the citywide average, the block group was not determined to contain a defined EJ community; rather, the additional demographic analysis conducted alongside field observations and local knowledge indicated that this area is predominantly a living area for young, post-college graduates who rent. This conclusion was confirmed through the following additional demographic analysis of this block group and citywide averages (U.S. Census Bureau 2012):

- Approximately 67 percent of the population in this block group consists of renters versus the citywide average of 53.9 percent.
- People aged 20–34 in this block group make up approximately 63 percent of the population versus the citywide average of 27 percent.
- Over 75 percent of the population within this block group has a Bachelor's or Master's Degree compared with a citywide average of less than 30 percent.

Within the area of indirect or cumulative impacts (within ½ mile of the project alignment and outside the area of direct impacts), one low-income block group near Wellington station was identified; 29.1 percent of the population in this block group is low-income, compared to the citywide average of 22.1 percent. While this block group contains a higher percentage of low-income populations than the citywide average, additional demographic analysis and field observations show that this block group does not contain a defined EJ community; rather, because this block group is adjacent to the Advocate Illinois Masonic Medical Center Campus, the residents in this block group are likely students and employees associated with the hospital. This conclusion was confirmed through the following additional Census analysis of this block group and citywide averages (U.S. Census Bureau 2012):

- Approximately 78 percent of the population in this block group consists of renters versus the citywide average of 53.9 percent.
- Approximately 64 percent of the population in this block group is female versus the citywide average of 51.6 percent.
- Over 45 percent of the population within this block group has a Bachelor's or Master's Degree compared with a citywide average of less than 30 percent.

RED-PURPLE BYPASS PROJECT ENVIRONMENTAL JUSTICE TECHNICAL MEMORANDUM

■ Approximately 20 percent of the population within this block group has a professional school degree compared with the citywide average of 3.5 percent.

Figure 3-2: Low-Income Population

3.3 Elderly and Disabled Population

Information concerning populations that are elderly and/or have disabilities was compiled as additional information about low-income and minority populations that are the subject of this EJ assessment.

The most recent data collected by the U.S. Census Bureau about elderly populations and people with disabilities was part of the 2012 Census. **Table 3-3**, **Figure 3-3**, and **Figure 3-4** show the number of people who are elderly and people with disabilities who live in the project area and the numbers within the City of Chicago. The disability statistics include individuals who have a sensory, physical, or mental disability or other condition that limits activities of daily living. In the project area, 3 percent of the population has a disability, which is a slightly lower share than for the City of Chicago. The elderly population living in the project area (5 percent) is lower than the city-wide average of 10 percent.

Table 3-3: Elderly and/or Disabled Population

	Within ½ Mile of	Project Alignment	City of Chicago			
10131		Percent (of total Population)	Total	Percent (of total Population)		
Elderly (Age 65+)	2,281	5%	283,148	10%		
Disabled	1,372	3%	286,595	11%		

Source: U.S. Census Bureau 2012d, 2012e

Figure 3-3: Elderly Population (Age 65+)

Figure 3-4: Disabled Population

3.4 Conclusion

Figures 3-6 and 3-6 show, by census block group, low-income and minority populations within the corridor. Locations of relatively high numbers of elderly and disabled populations are shown as well. The maps show that most areas within $\frac{1}{2}$ mile of the alignment include low-income or minority populations.

Figure 3-6: Minority Populations

Section 4 Environmental Impacts and Mitigation

This section describes the potential for disproportionate impacts and unevenness of benefits in the project area's EJ communities. Non-traditional data gathering techniques were used to identify the presence of distinct EJ populations near the alignment, or those EJ populations who are dependent upon potentially affected natural resources. Non-traditional data gathering techniques include, but are not limited to, conducting informal group meetings, using digital media, developing partnerships with community groups, participating in community-led events, and using direct mail.

The Build Alternative includes design features including noise barriers to reduce noise impacts and it provides for potential redevelopment potential following construction of the project. Potential redevelopment would occur only on remaining portions of identified properties required for implementation of the project and would be located about a ¼ mile from both the Addison and Belmont stations.

4.1 No Build Alternative

The No Build Alternative would not have adverse environmental impacts. No disproportionately high and adverse impacts would occur on low-income or minority populations. The No Build Alternative would also lack the benefits of the proposed project, including enhanced movement of passengers (mobility), economic development, and livability. Travel times would not improve, thereby limiting the mobility of passengers, many of whom are low-income and rely upon public transportation.

4.2 Build Alternative

4.2.1 Construction Impacts

The Build Alternative would result in temporary adverse construction impacts on neighborhoods surrounding the project. No disproportionately high and adverse impacts due to construction are anticipated, because impacts would be temporary and would be experienced by EJ and non-EJ communities alike. Construction impacts would include impacts on parcels from construction (temporary impacts) and displacements that would only be necessary to accommodate construction. Construction activities for the Build Alternative would last up to approximately 48 to 61 months. Property acquisitions are required for the permanent right-of-way and construction of the project. Remaining portions of parcels could be redeveloped following construction. Impacts would be temporary in nature, and the identification of properties needed for implementation for the project would be sufficient in size to accommodate construction and limit street closures and other neighborhood and community impacts.

4.2.1.1 Commercial Property Displacements

While construction displacements would be located in Census block groups with some low-income groups present, impacts would be temporary in nature and ultimately result in improved access to transit. Of the 21 properties that would be acquired for permanent right-of-way, 14 would be located in Census Block Groups with prominent low income populations due to existing high rental units in the immediate area. Of those 14 properties, two would require only air rights, one would require partial land acquisition and demolition of a rear building, one is a vacant lot, five would be residential building displacements, and five mixed-use building displacements. **Figure 4-1** provides the location of commercial displacements to accommodate project implementation (combined temporary easements and permanent takes).

Following construction, remaining parcels would become available for potential redevelopment. Any potential redevelopment would be beneficial in advancing the overall economic development potential in the community. Impacts on community character would be beneficial.

Figure 4-1: Location of Potential Property Displacements

4.2.1.2 Noise, Vibration, and Air Quality

Construction would produce temporary noise and vibration impacts but these could be mitigated. Some minor air quality impacts as a result of fugitive dust and/or construction vehicle emissions may also be experienced. Construction BMPs and construction scheduling would be used to minimize these adverse impacts. Construction impacts would be similar throughout the project area, and would not disproportionately affect EJ populations.

4.2.1.3 Visual and Aesthetic Conditions

The construction of the Build Alternative would produce temporary adverse impacts on the surrounding visual/aesthetic environment due to construction work zones. Off-site construction staging sites that would minimize visual impacts as well as neighborhood, community, and business impacts during constructions have been identified as part of the Build Alternative. During construction CTA would work to minimize visual impacts by using light shielding, debrisfree construction BMPs, continuing to outreach to the community, and using construction sites for pertinent machinery and materials storage to minimize visual disruption. The impacts would temporarily affect all people that live, recreate, or do business adjacent to the construction activities. Construction impacts related to visual and aesthetic conditions would be similar throughout the corridor, and would not disproportionately affect low-income or minority populations.

4.2.2 Permanent Impacts

The operation of Build Alternative would result in 21 partial or full displacements and easements, including 16 buildings that would be displaced. The Build Alternative identifies properties required for construction and implementation of the project. Remaining portions of these properties would be available for potential redevelopment following construction. New housing and businesses would be encouraged to locate in any potential redevelopments, which could create jobs.

Several changes to the visual environment of the rail infrastructure are proposed as part of the Build Alternative in an attempt to improve visual quality of the surrounding environment. New materials, colors, and detailing would be selected with the intention of being aesthetically pleasing and complementary with surroundings. The final design would be consistent with the context of the surrounding community. The existing open-deck structure would be replaced with a modern, closed-deck aerial structure with noise barriers that would provide beneficial improvements to the visual environment through the replacement of deteriorating infrastructure with modern structures. The bypass and modernized mainline tracks would be located in an existing rail corridor. Trains already operate in an aerial configuration in the area and the track structure occupies a large portion of the viewshed in the project area. While visual changes would be perceivable once built, the resulting visual impacts are expected to be congruent with the inherent, established character and scale of the surrounding environment to the largest extent possible.

Assessment for State of Illinois Environmental Justice Act for Elderly Only Populations: Consideration of impacts on elderly population alone leads to a finding that elderly populations would not experience adverse impacts with the Build Alternative. There are no prominent elderly Census Block Groups in the project area, however, there are still elderly populations with the project area. Elderly populations would not experience disproportionate impacts compared with others in the project area.

4.2.2.1 Permanent Benefits

Improvements to the rail line configuration would result in improved travel times and improved access to community facilities, major activity centers, and employment. The project would increase capacity, train speeds, and reliability of the system. Benefits include reduced noise and vibration impacts compared to existing conditions in some areas within the project area as a result of installation of a closed-deck structure, as well as housing, commerce, and employment opportunities. All populations throughout Chicago's North Side would experience the benefits of the Build Alternative. Mobility benefits would likely be more important to those passengers with disabilities, low-income populations, and the elderly. Many EJ populations share these characteristics and would likely value the relative importance of mobility improvement to a greater degree than would non-EJ populations, who may have more travel options available. The project would offer all populations, including minority and low-income populations, quicker, more reliable service along the Red, Purple, and Brown lines.

Based on the analysis and the mitigation commitments made by CTA, the Build Alternative would not result in substantial environmental impacts. As a result, the Build Alternative would also not result in disproportionately high and adverse effects on minority, low-income, aging, or disabled populations.

4.2.2.2 Multiple Impacts on EJ Communities

No locations would have multiple long-term adverse impacts for the Build Alternative.

4.2.3 Indirect and Cumulative Impacts

The cumulative impacts of the Build Alternative would not be disproportionate. While displacements would be located in an identified low-income area, they would be limited since the occurrence of the low-income block groups within the area of direct or cumulative impacts have to do with higher residential rental availability in the area; within the city of Chicago, there are sufficient residential vacancies available throughout Chicago and adjacent to the project area to offset the small number of residential units to be impacted by the project. Other impacts would be dispersed throughout the project area and would be experienced equally by EJ and non-EJ communities. Because these impacts would be fewer for EJ populations than for non-EJ populations, and would be dispersed throughout the project area, they would not be adverse. Based on the past, present, and foreseeable future trends, parklands and community facilities are not declining resources. No adverse cumulative impacts are anticipated for these resources.

4.2.4 Topics with No Adverse Impacts

The following topics are dismissed from detailed analysis in this technical memorandum, because no adverse impacts on EJ populations would result from the construction or operation of the Build Alternative in relation to these topics. All potential construction impacts within both EJ and non-EJ community areas would be temporary and minimized through BMPs for construction. The dismissed resources were analyzed:

- **Community Facilities:** There would be no impacts on access or displacement of community facilities in the project area.
- **Parklands:** There would be no adverse impacts on parklands in the project area.
- Energy: The construction and operation of the Build Alternative would not directly contribute to adverse impacts on energy resources. Long-term benefits could be realized in terms of energy resource savings as a result of the operation of a build alternative. These benefits would occur throughout the project area and as such, no disproportionately adverse impacts would be experienced by EJ populations.
- Geology and Soils: The soils and surficial geology (materials between the soils and the underlying bedrock) in the project area have already been disturbed by previous development activities. Construction activities would benefit the geologic and soil resources as a result of the removal and disposal of existing materials and the placement of new fill. Operation associated with the Build Alternative would not directly affect geologic or soil resources adversely.
- **Water Resources:** There would be no adverse impacts on water resources in the project area.
- **Wetlands:** The analysis concluded that there are no wetlands in the project area.
- **Floodplains:** The analysis concluded that there are no floodplains in the project area.
- **Threatened and Endangered Species:** Threatened and endangered species are not likely to be found within the project area.
- **Vegetation and Wildlife Habitat:** There would be no adverse impacts on vegetation and wildlife habitat in the project area.

Section 5 Outreach Methods and Summary

CTA conducted specialized outreach to reach EJ populations to ensure awareness of the proposed project improvements and most importantly, to provide opportunities for EJ populations to have meaningful participation in the review of the project and respective benefits and impacts. Methods of affording these opportunities included coordination with community leaders, targeted distribution of project information, and development of project materials in the languages of those that are linguistically isolated.

5.1 Limited English Proficiency Analysis

Full and fair participation during the decision-making process was provided without regard to race, color, or national origin in accordance with the statutory obligation imposed by Title VI. In addition, people who, as a result of national origin, have Limited English Proficiency (LEP) were afforded meaningful access to the project's programs and activities. EO 13166 advances this mandate by requiring federal agencies to identify whether linguistically isolated populations require services to enable their full and fair participation, and if so, to provide meaningful access to needed services. The need for LEP services was evaluated by analyzing whether people were linguistically isolated because of challenges with reading, writing, and/or speaking English. Before planning the public outreach activities, LEP needs were evaluated for populations throughout the RPM Program corridor using 2006–2010 Census data.

A diversity of languages is spoken along the 9.6-mile RPM Program corridor (**Table 5-1**). The ten most commonly spoken languages include English (71.2 percent), Spanish (12.2 percent), and African languages (2.2 percent). Collectively, Asian languages are spoken by 3.3 percent of the residents in the RPM Program corridor.

Table 5-1: Ten Most Commonly Spoken Languages in the RPM Program Corridor

Language	Total	Portion of Total
Total Speakers	291,910	100.0%
English Only	207,893	71.2%
Spanish / Spanish Creole	35,594	12.2%
African languages (Nigerian, Yoruba and Swahili)	6,264	2.2%
Chinese	4,941	1.7%
Russian	3,774	1.3%
French	2,833	1.0%
Tagalog	2,804	1.0%
Other Indo-European languages	2,269	0.8%
Vietnamese	2,217	0.8%
Hindi	2,177	0.8%

Source: U.S. Census Bureau 2010

Note: A Limited English Proficiency (LEP) analysis was conducted in 2010 in advance of the public scoping meetings for the RPM Program. This analysis relied on the most recent data available at the time, which was the 2000 Census. Table 2 is an update to the 2010 LEP analysis. While Spanish remains the predominant non-English language spoken in the project area, some of the findings in this LEP analysis differ from the 2010 LEP analysis.

Based on the LEP analysis conducted for the project, Spanish language interpreters were made available at all meetings due to the high representation of Spanish-speaking participants. Interpreters for other languages were also made available upon request at all public open houses and community meetings and the public hearing for this project. Public notice of the availability of translation services was also made in Russian and Chinese; however, no requests were received for additional translation services during spring 2014 outreach. Hearing-impaired interpreters were also made available upon request. **Table 5-2** highlights the languages spoken by non-English speakers that are the most linguistically isolated by location in the project area.

Table 5-2: Linguistic Isolation by Station and Community Area

Community Area	Station	Most Linguistically Isolated
Lakeview	Addison	Spanish
	Sheridan	Spanish

Source: U.S. Census Bureau 2010

The need for LEP services was evaluated by analyzing whether people were linguistically isolated because of challenges with reading, writing, and/or speaking English. Before planning the public outreach activities, LEP needs were evaluated for populations throughout the 9.6-mile RPM Program corridor. A 2010 LEP analysis was conducted before the commencement of public scoping using 2000 Census data, as well as the findings from the CTA's 2009 LEP analysis, which

was conducted as part of its Title VI requirements. More current, 2006–2010 ACS data was analyzed in this technical memorandum to confirm the pre-scoping findings.

5.2 Specialized Outreach Methods and Activities

Stakeholder interviews were held with several representatives within the identified EJ neighborhood areas of the project area to enlist organizations to assist in communications with LEP persons, engage EJ students, address redevelopment/revitalization interests, and respond to concerns about safety and security. These small group interviews were designed to build rapport, learn about the EJ communities, and bring out issues and concerns about the project. In addition, this exchange sought to identify specific groups or associations to engage and determine what communication channels could be used to leverage agency resources and maximize participation with specific communities. The meetings were planned, where possible, to reach specific communities by going where they congregate or attending meetings they already have scheduled. Presentations were also made to regularly scheduled meetings of a neighborhood organization or congregation within an affected EJ community that may be affected by the project.

Update meetings for the general public included language and hearing-impaired interpreters. Project open houses were held in buildings that are ADA-compliant within a convenient distance from transit and in well-known public gathering spaces for easy access. Public meeting materials were tailored to promote greater clarity and understanding of the project that transcends language barriers. Meeting and outreach materials were adapted from English to be linguistically and culturally appropriate for various communities to enable full and fair participation throughout the NEPA process.

5.3 Input Received through Specialized Outreach (2009-2013)

Comments have been received through the visioning process and direct mail survey conducted in 2009 and 2010; during Environmental Impact Statement public scoping meetings held in January 2011; during a series of project update meetings held in February 2012; and during a series of specialized EJ meetings conducted.

Based on the feedback received through the visioning process, top priorities for improvements to the RPM Program corridor were established: travel time, safety and passenger amenities, intermodal connectivity, ADA access at stations, increasing train capacity, and nurturing community development. Although travel time was a priority, the station consolidation concept presented to the public in 2011 and 2012 was a concern.

In 2012, thirteen organizations representing the interests of key EJ communities were identified through a process of mapping project impacts and EJ communities, as well as examining the participation of EJ communities to date. After the summer 2013 outreach to community organization leadership, CTA determined it should meet with many of those organizations, as well as other organizations that meet the same criteria in terms of representing EJ communities along the RPM Program corridor.

5.4 Input Received through Specialized Outreach (2014ongoing)

In late 2013, FTA, CTA, and city officials developed a phased, tailored approach to implement improvements to the RPM Program corridor, allowing CTA to make the greatest number of improvements while minimizing impacts on the surrounding community. Phase One of RPM is proposed to include two discrete projects within the 9.6-mile corridor, the Red-Purple Bypass Project and the Lawrence to Bryn Mawr Modernization Project. With the addition of RPM phasing, the project team re-analyzed the two project areas and divided the resulting list into those groups representing or engaging EJ populations in the Red-Purple Bypass Project area and those in the Lawrence to Bryn Mawr Modernization Project area. Community groups identified within the Red-Purple Bypass Project area and who were contacted as part of the EJ and community group outreach for this EA included:

- Central Lakeview Merchants Association
- Teatro Vista (Latino community)
- Hispanocare (Spanish-speaking community)
- Serbian Cultural and Arts Center (Serbian community)

Each of these groups were contacted by telephone and provided an opportunity for a presentation on the proposed project. All community groups received a follow up letter to ensure maximum awareness of project details and provide an ongoing point of contact at CTA for interested community groups to request a project presentation. Formal follow up correspondence to all community groups as part of this outreach are included in **Attachment B**.

In coordination with the 44th Ward Alderman's office, CTA also conducted three additional community meetings between April and June 2014 to address the specific concerns of residents and business owners within the project area.

At the request of interested community groups, CTA conducted meetings to share information about the project and allow community members to ask questions and voice concerns. Meeting formats were tailored to the community group needs and ranged from formal presentations, to open houses and question and answer sessions, to short briefings with question and answer sessions as part of standing community group meetings. The community group meetings held as part of the spring 2014 outreach effort are summarized in **Table 5-3**.

Table 5-3: Spring 2014 Community Group Meetings

Group Name	Meeting Date	Location		
Central Lakeview Merchants Association	April 21, 2014	3355 N. Clark Street		
44th Ward Community Meeting	May 7, 2014	850 W. Addison Street		
44th Ward Community Meeting	May 12, 2014	909 W. Belmont Avenue		
44th Ward Community Meeting	June 16, 2014	850 W. Addison Street		

Meeting notes and other supporting information for these outreach efforts are provided in $Attachment\ C$.

July 1, 2014

Mr. Gus Isacson Central Lakeview Merchants Association 3355 N. Clark Street Chicago, IL 60657

Re: CTA Red and Purple Modernization Program, Phase One Projects

Dear Mr. Isacson:

Thank you for allowing the CTA to meet with your organization recently to discuss the Red and Purple Modernization (RPM) Program Phase One projects. Over the last few months, CTA has been conducting public and community outreach with your organization and other interested community members to provide information on these exciting projects and solicit early feedback to help inform the development of these projects. The RPM Program is a major initiative that will completely rebuild the northern portion of the Red Line from Belmont to Howard station and the Purple Line, which extends to Linden station in Wilmette. The RPM program's goals include modernizing the infrastructure and expanding capacity on Chicago's busiest rail line. A massive, multi-stage program, RPM is proposed to be completed in phases. The Phase One improvements currently proposed consist of two main projects:

- The Red-Purple Bypass Project would construct a new bypass north of the Belmont station to expand capacity and increase train speed where the Red, Purple, and Brown lines all intersect.
- The Lawrence to Bryn Mawr Modernization Project would expand, modernize and add Americans with Disabilities Act (ADA) access (including elevators) to the Lawrence, Argyle, Berwyn, and Bryn Mawr stations. The project also includes fully modernizing the 90+ year old track infrastructure from Leland Avenue on the south to approximately Ardmore Avenue on the north.

Phase One will also include corridor signal improvements from approximately Belmont to Granville stations as well as continued interim improvements to track and structures from the Linden station to Belmont station.

In addition to these smaller focused community group meetings, public open house meetings were held for each project on May 21, 2014 (Lawrence to Bryn Mawr Modernization Project) and May 22, 2014 (Red-Purple Bypass Project) to share information and gather early input from interested citizens.

Early public outreach will continue through the summer of 2014. During the fall of 2014, CTA will be conducting environmental analyses for these projects; results of these analyses will be presented at public hearings tentatively scheduled for the spring of 2015. At that time, CTA Government and Community Relations staff will be in contact with your organization to provide updated information on these projects and the scheduled public hearings.

As these projects develop, we encourage your continued participation and input. Project updates will be provided periodically through the project email distribution list and on the project website at transitchicago.com/rpmproject. You may also request information or provide your comments at any time by contacting:

Chicago Transit Authority Planning, 10th Floor Attn: RPM Program 567 W. Lake Street Chicago, IL 60661-1465

or e-mailing RPM@transitchicago.com.

If you have any questions or would like to discuss either of these projects further, please do not hesitate to contact Jeff Wilson (business card enclosed) or myself through the project email address.

Sincerely,

Steve Hands Project Manager CTA Planning

Re: CTA Red and Purple Modernization Program, Phase One Projects

Dear Sir or Madam:

Over the last few months, CTA has been conducting public and community outreach regarding the Red and Purple Modernization (RPM) Program Phase One projects. This major initiative will completely rebuild the northern portion of the Red Line from Belmont to Howard station and the Purple Line, which extends to Linden station in Wilmette. The RPM program's goals include modernizing the infrastructure and expanding capacity on Chicago's busiest rail line. RPM is a massive, multi-stage program that is scheduled to be completed in phases. The Phase One improvements currently proposed consist of two main projects:

- The Red-Purple Bypass Project would construct a new bypass north of the Belmont station to expand capacity and increase train speed where the Red, Purple, and Brown lines all intersect.
- The Lawrence to Bryn Mawr Modernization Project would expand, modernize and add Americans with Disabilities Act (ADA) access (including elevators) to the Lawrence, Argyle, Berwyn, and Bryn Mawr stations. The project also includes fully modernizing the 90+ year old track infrastructure from Leland Avenue on the south to approximately Ardmore Avenue on the north.

Phase One will also include corridor signal improvements from approximately Belmont to Granville stations as well as continued interim improvements to track and structures from the Linden station to Belmont station.

Public open house meetings were held for each project on May 21, 2014 (Lawrence to Bryn Mawr Modernization Project) and May 22, 2014 (Red-Purple Bypass Project) to share information and gather early input from interested citizens. In addition, a number of smaller

community meetings have been held at the request of interested community groups in each project area.

As part of this comprehensive outreach process, CTA Government and Community Relations staff have been in contact with your organization to provide information on the proposed Phase One improvement projects. Based on this outreach, we understand that your organization is not interested in a community group meeting at this time. Enclosed, please find project informational materials for your reference. Please note that we have added your organization to the project email distribution list to continue to keep you apprised of project developments as they occur.

Early public outreach will continue through the summer of 2014. Should you desire CTA to provide a formal presentation to your organization over the summer, please contact Jeff Wilson, Government and Community Relations Officer, at (312) 681-2712 or JWilson@transitchicago.com.

During the fall of 2014, CTA will be conducting environmental analyses for these projects; results of these analyses will be presented at public hearings tentatively scheduled for the spring of 2015. At that time, CTA Government and Community Relations staff will be in contact with your organization to provide information on these projects and the scheduled public hearings.

As these projects develop, we encourage your continued participation and input. Attachment C Spring 2014 Meeting Notes and Supporting Information

Meeting Summary

Date: Monday, April 21, 2014

Meeting: CTA with Central Lakeview Merchants Association

Meeting Purpose: CTA to share proposed RPM Phase One improvements and identify

areas of community concern

Present:

Gus Isaacson, Central Lakeview Merchants Association Steve Hands, Chicago Transit Authority Jeff Wilson, Chicago Transit Authority

Time: 9:00 am to 10:00 am

Location: Central Lakeview Merchants Association, 3355 N. Clark Street, Chicago, IL

Presentation Highlights

CTA staff provided and overview of the Red and Purple Modernization Program (RPM) and the proposed Phase One projects: Lawrence to Bryn Mawr Modernization and the Red-Purple Bypass. Representatives from the CTA discussed:

RPM Program Overview

The RPM Program is a 9.6-mile corridor wide improvement and modernization of aging track, structures and stations on one of Chicago's heaviest traveled lines, accounting for one in every five CTA train rides. RPM is one part of CTA's overall Red Ahead Program, a comprehensive initiative for maintaining, modernizing and expanding Chicago's most traveled line. The overall goals of RPM are to expand capacity, speed service, improve accessibility, modernize the existing system, thereby supporting continued economic development in the corridor and improving customer service. CTA is pursuing a wide range of local, state and federal sources to fund the RPM program. The RPM Phase One projects are estimated to cost approximately \$1.7B and these projects are currently listed as the first and only eligible "core capacity" expansion projects in the nation, a new federal funding source identified in the most recent update of the national transportation bill (MAP-21).

RPM Phase One

A massive, multi-stage program, RPM is proposed to be completed in phases to provide the greatest amount of capacity improvements in a time expected by the public who relies on this line for meeting their travel needs. Phase One is proposed to include construction of a Red-Purple Bypass just north of Belmont Station to eliminate delays where the Red, Purple and Brown lines all intersect. This is a major bottleneck in the CTA system, and will allow for reduction in delay and enhancement of core capacity on all three lines. The second project in Phase One includes rebuilding four aging stations from Lawrence to Bryn Mawr and rebuilding all tracks, support structures, bridges and viaducts between Leland Avenue and Hollywood Avenue. The new stations would resolve a 2+ mile gap in ADA accessible stations along the rail line by widening stations and providing modern amenities, and would significantly improve train speeds and service reliability. Interim improvements to tracks and signal systems throughout the RPM corridor are also planned to complement these two major projects.

CTA is preparing an Environmental Assessment

CTA has been evaluating the project alternatives as part of the overall RPM vision and is beginning the environmental assessment (EA) to evaluate the potential positive and negative environmental impacts of construction and operation of each Phase One project. Information from the assessments along with public input will help to shape the project design and will determine any appropriate mitigation measures to reduce or eliminated potential negative impacts. Once the CTA completes the Draft EA, a public hearing will be held (tentatively in Spring 2015) to share the findings of the EA. This early community outreach has been planned to provide an early and continuous outreach process for obtaining community feedback throughout the process.

Questions and Comments from Meeting Participants

- CTA provided additional information on potential project displacements, and reasons/needs for these parcels.
- The major concern from the Central Lakeview Merchants Association is the
 potential for empty storefronts within the community and economic impacts. The
 Central Lakeview Merchants Association would like CTA to work diligently to
 acquire and sell properties for developers as quickly as possible to minimize
 economic impacts.

Follow Ups

- Project materials, including handouts and flyers about the open house meetings
 planned for the RPM Phase One projects were provided to get the word out about
 this project and pass along information to community group constituents.
- CTA will continue to work with the Alderman's office and community groups through the environmental analysis process and into the design, and will be working through Government and Community Relations staff to provide updates on project development to community groups throughout project development.

•	The RPM project website and email list are also being updated through this process and CTA encourages community group members to sign up for this list.

44th Ward Community Meetings Summary

Meeting: CTA Community Meetings with the 44th Ward Community

Meeting Purpose: CTA to share proposed RPM Phase One improvements and provide opportunities to share more detailed project information to address community concerns

Sign In Sheet Attachments

Meeting Overview

At the request of Alderman Tunney's Office (44th Ward), CTA conducted a series of meetings with community members concerning the Red-Purple Bypass Project. These meetings were scheduled to provide one on one community updates on the project, answer community questions and facilitate discussion on design for the Red-Purple Bypass Project. As requested, CTA provided follow up at each meeting with additional information requested from the community related to displacements, economic development, and anticipated construction impacts. These meetings are ongoing through project development in coordination with the Alderman's office.

Meeting Materials

The Alderman's office provided sign in sheets for each meeting (attached), with the following in attendance:

- 19 people signed in for the May 7, 2014 meeting
- 14 people signed in for the May 12, 2014 meeting

16 people signed in for the June 16, 2014 meeting

Project information handouts, comment cards, roll out displacement maps, FTA Uniform Relocation Act brochures, and other materials were provided at each meeting to facilitate discussion. CTA staff and supporting engineering and relocation specialist staff were available to address questions from community members and provide detailed answers.

Meeting Structure

All meetings provided an opportunity for formal status updates on project development, with a follow up Q&A session to understand community concerns and answer more detailed questions about the proposed project design and construction impacts.

RPM and the Red Ahead Program

Red Ahead is a comprehensive initiative for maintaining, modernizing, and expanding Chicago's most traveled rail line.

- Red North Station Interim Improvements (completed 2012)
- Red Line South (Dan Ryan) Reconstruction Project (completed 2013)
- 95th Street Terminal Improvement Project (starting summer 2014)
- Construction of New Wilson Station (starting fall 2014)
- Red and Purple Modernization (RPM)
- Red Line Extension (RLE)

INTERNAL DRAFT

RED AHEAD

CTA is continuing the public processes on two critical components of the Red Ahead Program in 2014

Red and Purple Modernization (RPM)

- Pursuing Core Capacity federal funds
- Core Capacity projects are intended to increase capacity of existing rail lines within the current transit footprint, therefore entail a relatively shorter environmental and planning process
- RPM is the first and only Core Capacity project in the FTA's Project Development phase and is recommended for funding in the proposed FY2015 federal budget
- Phase One includes two main projects and a single alternative is proposed for each of these projects

Red Line Extension (RLE)

- Pursuing New Starts federal funds
- New Starts projects expand rail service into an area that is not within the current transit footprint, therefore entail a relatively longer environmental and planning process
- CTA must compete with other New Starts projects from across the country that are already in line for funding
- Multiple alternatives and their impacts are being evaluated

RPM Corridor Vision Goals

- Speed service
 - fewer curves and better infrastructure
- Improve accessibility
 - all stations accessible to people with disabilities
- · Build modern facilities
 - New wider stations, more reliable infrastructure for the next 60-80 years
- · Expand capacity
 - more riders with less crowding
- Support economic development
 - more jobs and new development opportunities
- · Improve customer experience
 - modern, quiet and smooth ride

NTERNAL DRAF

RPM - Phase One

- Build the <u>Red-Purple Bypass</u> north of Belmont
- Modernize stations, track and structure <u>Lawrence to</u> <u>Bryn Mawr</u>
 - Expand ADA accessibility with elevators, platform expansion
- Track work to repair slow zones along the entire corridor, beyond the Phase One Improvements
- Modernize signal system to increase capacity and reliability
- Two Environmental Assessments, analyzing community and environmental impacts, will be conducted
 - One for the Red-Purple Bypass Project
 - The other for the Lawrence to Bryn Mawr Modernization Project
- Combined, the Phase One projects are estimated to cost \$1.7 billion at completion

INTERNAL DRAFT

Challenge: Flat Intersection

Bottleneck

- Up to 150,000 rides pass through the busy rail intersection near Belmont every weekday
- Current design requires the north bound Brown Line trains to make left turn from the right most track, impeding trains on all tracks, which:
 - · Limits capacity
 - · Increases crowding
 - · Reduces reliability
 - · Increases travel time
- National standards recommend removing flat intersections like this for rapid transit lines with frequent service

"Your attention please! We are standing momentarily waiting for signal clearance."

INTERNAL DRAFT

RED AHEAD Challenge: Growing Demand Peak demand on the three lines has grown by 40% in the last 5 years If demand continues to grow at same rate, by 2030 twice as many trains per hour would be needed

- Demand already exceeds capacity at intersection
 - Additional service cannot be added
- 185,000 NEW residents are projected to move to areas within ½ mile of Red and Brown Line stations by 2040

cta

INTERNAL DRAFT

("), modernization

Proposed Solution: Red- Purple Bypass

- The largest capacity improvement in in the entire RPM corridor
- Allows CTA to add 30% more service in the peak leading to less crowding
 - CTA could serve at least 7,200 more customers per hour
 - · Accommodates future growth
- Improves reliability for all Red, Purple and Brown Line trains
- Saves customers half a million hours annually

INTERNAL DRAFT

RPM Phase One: Red-Purple Bypass Concept rendering looking north from Belmont platform

Challenge: Old & Narrow Stations

The Lawrence, Argyle, Berwyn and Bryn Mawr stations are in need of a complete rebuild.

- Platforms are only 12' wide, too narrow for elevators
- Support structures are over 90 years old
- Columns in stationhouse limit sightlines
- Few amenities possible in small footprint
- Narrow platforms slow the boarding process

Existing: 12-foot wide platform

INTERNAL DRAFT

RED AHEAD

Proposed Solution: Construct Modern Stations

- More comfortable for waiting customers
- More space for amenities like benches, wind screens, and realtime information
- Better sightlines in stationhouse
- Faster and easier boarding

Modern: ~24-foot wide platform

INTERNAL DRAFT

Challenge: Slow Zones

- Old infrastructure requires frequent repairs and restricted speeds to maintain safe travel
- As of March 6, 2014, more than six miles
 (18.4%) of RPM corridor track was under slow
 zone conditions leading to:
 - Slower travel speed limits of as little as 15mph
 - Increased maintenance costs
 - Increased operating costs to maintain level of service

INTERNAL DRAFT

RED AHEAD

Proposed Solution: Track Improvements

- New track will create a smoother, more comfortable ride for customers.
- · Project work will include:
 - New, modern signals
 - New support structures
 - New bridges and viaducts for the Red Line between Lawrence and Bryn Mawr
 - Additional track and structure work outside of the Phase One projects to reduce slow zones

Concept for new viaduct with no columns in the street

cta

Noise Reduction Strategies

Among the concerns voiced to date have been the potential noise effects of running faster, longer, and/or more frequent trains.

Where tracks are modernized, noise levels would be similar to today, and in some areas, quieter because of:

- · Continuous welded rail
- · Closed deck structure
- · Noise barriers, where necessary

Jointed versus Welded Rail

INTERNAL DRAFT

Property Displacements

The CTA's RPM Phase One projects would require some existing properties to be acquired to accommodate:

- · Expanded station platforms
- · Reduction in curves
- · The Red-Purple Bypass
- Construction staging areas

INTERNAL DRAFT

RED AHEAD (pm)odernization

Property Displacements: A Comparison

Project	Red and Purple Modernization – Phase One	
	Red-Purple Lawrence to Bypass Bryn Mawr Modernizatio	
TOTAL Primary Building Displacements	16	3

Brown
Line Capacity
Expansion
2006-2008
For reference

To mitigate the impact of acquisition, property owners are protected by the Federal Uniform Act on relocation assistance and property acquisition. Property owners:

- · Would be paid not less than fair market value for their land and buildings
- May be eligible for compensation equal to the original purchase price of the property
- · Would be compensated for the cost of relocating their business or residence

CTA is committed to reducing impacts:

- CTA has already conducted studies to reduce impacts and successfully reduced building impacts to less than half of previous alternatives
- CTA will continue to work with the community and property owners to minimize property impacts.

cta

INTERNAL DRAFT

Construction Impacts

Service impacts

- Temporary station closures during construction
- Partial track closures may delay trains and/or require trains to bypass stations in one direction

What CTA will do to reduce impacts

- Complement existing bus routes with bus shuttles, as necessary
- · Notify customers of changes in service
- Continue to perform engineering studies with the goal of reducing construction impacts

INTERNAL DRAFT

RED AHEAD

Construction Impacts

Community impacts

- · Temporary street closures
- · Temporary construction noise
- Construction equipment and material storage

What CTA will do to reduce impacts

- Road closures will be announced and detours provided
- Notices of noise-generating activities will be posted
- Off-street construction staging areas have been identified to reduce the amount of material and equipment in the neighborhood

INTERNAL DRAFT

Economic Development and The Brown Line Capacity Expansion Project

- Median home values near the Brown Line grew over 40% from 2000 to 2011, twice as quickly as the RPM corridor
- Since 2010, 15% of all City of Chicago new construction building permits were issued near Brown Line stations, 3-times as many per square mile as the RPM corridor
- Ridership on the Brown Line grew 50% quicker than on the Red Line between 2000 and 2011

The Brown Line Capacity Expansion Project

- Constructed from 2006-2009
- \$530 million investment
- Lengthened platforms to accommodate 8-car trains
- Reconstructed 16 stations and added ADA access

INTERNAL DRAFT

RED AHEAD

Economic Development on the Brown Line Before (2002) Today (2014)

Southport station area

Recent development has increased density and activity

Opportunities for Transit Oriented Development

Parcels remaining after construction will be made available for new residential and retail development near:

- The Red-Purple Bypass (north of Belmont)
- Lawrence
- Bryn Mawr

Transit Oriented Development will be encouraged after construction in order to:

- Increase Economic Development
- · Reduce visual impacts of Bypass
- · Increase activity and transit ridership

Conceptual Rendering: Clark Street looking north toward Roscoe

INTERNAL DRAFT

RED AHEAD

Project Funding

- CTA is pursuing a wide range of local, state and federal sources to fund the RPM Phase One projects as well as future phases of the RPM program
 - RPM Phase One is estimated to cost \$1.7B
 - The federal government has shown significant support:
 - Changes to federal law have made capacity expansion activities, like the RPM program, eligible for federal grants and loans
 - FTA listed RPM as the first eligible core capacity expansion project
 - CTA received the *first* core capacity expansion federal grant to support RPM Phase One project development
 - CTA is looking at cost-saving strategies through alternative construction and financing methods

Environmental Assessment (EA) Considerations and Public Outreach Topics

Construction and operational features - transportation, property displacements, noise and vibration, hazardous materials, energy, construction impacts

Community features - land use and economic development, neighborhood and community impacts, historic resources, visual and aesthetics, environmental justice, safety and security

Natural features - air quality, water resources, biological resources, geology and soils

- The majority of these resources are expected to experience benefits or minimal permanent impacts after implementing the proposed mitigation strategies
- We are requesting feedback from the community to inform the design and environmental analysis of the Phase One projects

Section 1 Introduction

The Chicago Transit Authority (CTA), in cooperation with the Federal Transit Administration (FTA), proposes to construct a fifth track bypass just north of Belmont station where the CTA rail system Red, Purple, and Brown line tracks converge at an existing flat junction. Improvements as part of this project would also reconstruct approximately 0.3 mile of the mainline Red and Purple line tracks from Belmont station on the south to the segment of track between Newport and Cornelia Avenues on the north. This project, known as the Red-Purple Bypass Project, would modernize infrastructure and expand capacity, reduce passenger travel times, and improve system mobility and safety at one of the largest bottlenecks in the CTA rail system.

This technical memorandum provides a summary of resources determined to have limited or no impacts and reasons for this determination. Resources included in this memorandum are air quality, water resources, biological resources, geology and soils, energy, and safety and security.

Two alternatives are under consideration: the No Build Alternative and the Build Alternative.

1.1 No Build Alternative

The No Build Alternative is a required alternative as part of the NEPA environmental analysis and is used for comparison purposes to assess the relative benefits and impacts of implementing the Red-Purple Bypass Project. The No Build Alternative would maintain the status quo, and would not expand system capacity.

The No Build Alternative represents future conditions if the Red-Purple Bypass Project were not implemented. The alternative would include typical repairs to the existing flat junction and the associated mainline tracks based on historic funding levels needed to keep the lines functional. Capital expenditures would be minor compared to the Build Alternative. Functional improvements under the No Build Alternative would be insufficient to respond to ridership demand, and would not modernize the system. Some expenditure would be made to keep the system operating; however, service quality and effective capacity would decline over time, and maintenance costs would rise due to continued aging of the infrastructure. The No Build Alternative would not involve substantial changes to the existing infrastructure or major construction activities. Travel times would likely continue to increase and service reliability would continue to degrade in order to safely operate on deteriorating infrastructure.

1.2 Build Alternative

The Build Alternative consists of constructing a fifth track bypass for the northbound Brown Line and reconstructing approximately 0.3 mile of the mainline Red and Purple line tracks from Belmont station on the south to the segment of track between Newport and Cornelia Avenues on the north. The improvements would address current and increased ridership demands, decrease travel times, raise overall system reliability and safety, reduce noise levels, and provide a modern

RED-PURPLE BYPASS PROJECT RESOURCES WITH LIMITED OR NO IMPACTS TECHNICAL MEMORANDUM

track structure with a renewed useful life of 60 to 80 years while supporting future growth and development in the project area and beyond. **Figure 1-1** provides a map of the project limits.

1.2.1 Fifth Track Bypass

Currently, northbound Brown Line trains must cross the north- and southbound Red Line tracks and the southbound Purple Line track at Clark Junction. This flat junction configuration causes signal delays because Red, Purple, and Brown line trains must wait for each other to pass through the junction before proceeding. The Build Alternative would provide a grade-separated junction allowing northbound Brown Line trains to cross unimpeded over and above the other tracks on a new aerial structure, resulting in increased capacity to all three lines while also improving travel time and overall system reliability and safety. A new track would be built to the east of the existing tracks, ramp up, and curve westward over the mainline tracks to merge onto the existing Brown Line track elevated structure just west of Sheffield Avenue. Based on conceptual engineering, the bypass track is expected to rise approximately 40 to 45 feet above the existing ground level (up to 22 feet above the existing tracks) at its highest point. Figure 1-2 shows a picture of the existing four-track system at Belmont station facing north and an artistic conceptual rendering of the proposed bypass.

RED-PURPLE BYPASS PROJECT RESOURCES WITH LIMITED OR NO IMPACTS TECHNICAL MEMORANDUM

Figure 1-1: Red-Purple Bypass Project Limits

Figure 1-2: Photo and Artistic Conceptual Rendering of Proposed Red-Purple Bypass, Facing North from Belmont Station

1.2.2 Mainline Track

The existing mainline tracks are directly underneath the location of the proposed bypass. These tracks date back to the turn of the 20th century and have not been fully replaced since this time.

The existing track geometry north of Clark Junction requires Red and Purple line trains on all four tracks to maneuver through two short-radius curves between School Street and Newport Avenue, partly beneath the location of the proposed new bypass tracks. These short-radius curves restrict train speeds; increase travel time, noise levels, and rail wear; and reduce passenger comfort with undesirable side-to-side movements. As part of the Red-Purple Bypass Project, these existing short-radius curves would be realigned to eliminate unnecessary speed restrictions, improving

RED-PURPLE BYPASS PROJECT RESOURCES WITH LIMITED OR NO IMPACTS TECHNICAL MEMORANDUM

train speeds, travel time, and ride quality. If not improved, these speed-restricted curves would limit speeds for the Red and Purple lines even after the flat junction capacity constraint is removed. The existing open-deck, steel structure with jointed rail, which is over 115 years old, would be modernized from Belmont station on the south to the segment of track between Newport and Cornelia Avenues on the north. The modernized track structure would be wider than the existing track structure to meet modern design standards, including provisions for worker safety. To minimize noise and vibration impacts from faster and more frequent trains, the proposed structure would use a closed-deck aerial structure with direct-fixation track and welded rail. Noise barriers (approximately 3 to 5 feet in height) are proposed on both sides of the track deck for the full length of the project limits to reduce noise transmission at and below track level. At specific locations special trackwork, signals, signal equipment, and relay houses would be included.

The project would be constructed with minimal service disruptions. Improvements in the area would lead to several building displacements in the vicinity to accommodate permanent right-of-way and construction needs. Portions of the land acquired for permanent right-of-way would be needed for the final track realignment; the remainder of property would become available for potential redevelopment after construction.

Section 2 Air Quality

The project would occur in Cook County, Illinois, which has been designated by the U.S. Environmental Protection Agency (USEPA) as a nonattainment area for 8-hour ozone and fine particulate matter (PM_{2.5}) national ambient air quality standards (NAAQS). Nonattainment areas are where air pollution levels exceed the NAAQS as defined by the Clean Air Act Amendments of 1970. Each state must have and implement a plan (known as a State Implementation Plan [SIP]) that documents the measures taken in a specific nonattainment area to attain the NAAQS. Because the Red-Purple Bypass Project would occur within a nonattainment area, it is FTA's responsibility, as the federal funding agency, to ensure that the proposed project conforms to the Illinois SIP. The RPM Program is in both the Regional Transportation Plan (*GO TO 2040*) and the Transportation Improvement Program (TIP, CMAP's Federal Fiscal Year 2014–2019 Transportation Improvement Program¹). Both the Regional Transportation Plan and the TIP conform to the SIP; therefore, the RPM Program conforms to the SIP and a separate conformity analysis of the specific project is not warranted because its impacts on region-wide emissions have already been taken into account.

Although the project would occur in a non-attainment area for $PM_{2.5}$, the Red-Purple Bypass Project does not meet the criteria for "projects of air quality concern" as defined under 40 CFR § 93.123(b)(1), for which a detailed hot-spot analysis is required. The Build Alternative therefore meets statutory and regulatory transportation conformity requirements without performing a $PM_{2.5}$ hot-spot analysis, and no adverse air quality impacts are predicted at intersections or other $PM_{2.5}$ hot-spots within the project area.

The Red-Purple Bypass Project was analyzed at the regional level and was determined to be in conformance; therefore, the impacts on air quality from the alternatives were compared qualitatively. No additional modeling was required for this project.

2.1 Environmental Impacts

2.1.1 No Build Alternative

The No Build Alternative would not create new emissions or have negative operational air quality impacts. The No Build Alternative would also not reduce regional vehicle miles traveled (VMT)-related emissions like the Build Alternative.

2.1.2 Build Alternative

The Build Alternative could result in some adverse impacts on air quality during construction; these impacts would not be substantial and would be minimized through implementation of appropriate construction BMPs. The Build Alternative would result in an overall beneficial impact

¹ The RPM Program TIP project number is 16-10-9001.

RED-PURPLE BYPASS PROJECT RESOURCES WITH LIMITED OR NO IMPACTS TECHNICAL MEMORANDUM

on air quality by improving speed and reliability of the transit system, attracting new passengers who currently make trips in automobiles.

With or without the Build Alternative, emissions from motor vehicles in the project area are expected to decrease with time, despite a projected increase in VMT. Demand for public transit in the project area is growing, but the current CTA facilities and systems are not able to accommodate this growth. If passengers shift their commutes from public transit to cars due to inadequate transit capacity, VMT and motor vehicle emissions would increase. By implementing the Build Alternative, more passengers would stay with public transit and additional VMT growth and increase in motor vehicle emissions would be avoided. The Build Alternative would have an overall beneficial impact on air quality by providing dramatically improved speed and reliability. The improved speed and reliability would lead to increased diversion of travelers from their cars to the train, which in turn would lead to lower VMT and lower motor vehicle emissions. This diversion would, therefore, reduce regional emissions.

During operation, the Build Alternative would cause no direct emissions; CTA trains are electrically powered. Increasing the number train trips, the number of cars per train, or the speeds of the trains would most likely lead to increased use of electricity from the utility grid. This increase in energy use could lead to increased emissions at fossil fuel burning power plants supplying electricity to the grid. The overall impacts on air quality, with or without the Build Alternative, are not expected to be substantial. Increases in power consumption would be due to increased service (due to increased ridership demand) and improved service (which attracts more ridership), but increases in power consumption would be offset by avoiding increases in or reducing VMT.

The greenhouse gas (GHG) emissions in the project area would follow changes in VMT. Indirect emissions at the fossil fuel burning power plants would be expected to increase because of increased energy demand for the project. Reduction in VMT that accompanies modernized transit facilities described above would have a beneficial impact on GHG emissions. During operation of the Build Alternative, there would be no direct emissions that require emissions controls.

Air quality impacts during construction would be primarily associated with dust and vehicle exhaust emissions and would be measured in terms of the construction period or the amount of materials to be removed. The Illinois Environmental Protection Agency has strict guidelines for controlling fugitive dust, diesel soot emissions, and GHG emissions. Impacts on local traffic movements could also result from trucks and construction equipment accessing and egressing the construction sites and staging areas.

To alleviate adverse air quality impacts during construction, CTA would direct the contractor to prepare and implement a Dust Control Plan, a work zone traffic management plan, and a strategy to control emissions from diesel-powered equipment. These plans would follow the guidelines from Illinois Department of Transportation. GHG emissions during construction would be minimized by limiting idling times by trucks and equipment, maintaining equipment in proper working order, and reducing electricity consumption at the construction sites.

Section 3 Water Resources

This section describes the existing water resources within the project area. The potential impacts on these resources were determined based on acreage or linear feet of impact on water resources. Readily available data on these resources was used for the analysis.

3.1 Surface Water

Lake Michigan is the dominant topographic feature in the region. The project would be located within the Lake Michigan watershed (McConkey 2000). The project area would cross no waterbodies. A map showing the project area in relation to Lake Michigan is provided in Figure 1.

3.1.1 Environmental Impacts

3.1.1.1 No Build Alternative

There would be no impact on surface waters under the No Build Alternative.

3.1.1.2 Build Alternative

There would be no modifications to navigable waterways as part of this project. Given that the project area is already highly urbanized, there would be no increase in impervious area as part of this project. Alterations and minor changes to topography would not greatly affect the direction of drainage through the project area and would not change drainage within the watershed. Stormwater drainage might be affected by the proposed structure; however, these alterations would not greatly affect the direction of drainage. As a result, no adverse impact on surface waters is anticipated.

Figure 3: Waterbodies near the Project Area

3.2 Groundwater

Groundwater is not a drinking water source within the project area. There are no sole source aquifers in the project area (USEPA 2014).

3.2.1 Environmental Impacts

3.2.1.1 No Build Alternative

There would be no impact on groundwater under the No Build Alternative.

3.2.1.2 Build Alternative

Due to the predominance of impervious surfaces throughout the project area, minimal percolation to the underlying groundwater occurs; any potential increases in contaminated surface water runoff as a result of the Build Alternative would have no adverse impact on groundwater quality. Dewatering activities during construction could temporarily affect local groundwater levels; contaminated groundwater encountered would need to be disposed of properly.

3.3 Wetlands

Under the National Wetland Inventory (NWI) Program, the U.S. Fish and Wildlife Service maintains a digital database of wetland and surface water resources in the United States. The NWI was reviewed, including updates made by Ducks Unlimited, a wetlands conservation organization, to identify any wetlands or surface waters within the project area (Ducks Unlimited 2014). According to the updated NWI maps, there are no wetlands in the project area. A review of the Illinois Department of Natural Resources' (IDNR) Ecological Compliance Assessment Tool (EcoCAT) for any wetlands located within 200 feet of the proposed project identified no wetlands in the project area (IDNR 2014a). The EcoCAT report is included in Attachment A. A review of the U.S. Department of Agriculture (USDA) National Resources Conservation Service (NRCS) Web Soil Survey website identified no hydric soils within 200 feet of the proposed project (USDA 2014). Sites that have soils classified as "not hydric" are unlikely to contain wetlands. The Web Soil Survey results for the project area are included in Attachment B. The 200-foot buffer was determined to be suitable for this analysis as it would capture any potential impacts outside of the project that might be affected by construction activities.

There are no wetlands within the project area; therefore, neither the No Build Alternative nor the Build Alternative would have adverse impacts on wetlands and no mitigation measures would be required.

3.3.1 Environmental Impacts

3.3.1.1 No Build Alternative

There are no wetlands within the project area; therefore there would be no impact on wetlands as part of the No Build Alternative.

RED-PURPLE BYPASS PROJECT RESOURCES WITH LIMITED OR NO IMPACTS TECHNICAL MEMORANDUM

3.3.1.2 Build Alternative

There are no wetlands within the project area; therefore there would be no impact on wetlands as part of the Build Alternative.

3.4 Floodplains

Executive Order 11988 requires federal agencies to avoid impacts associated with the occupancy and modification of floodplains. The Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRM) were reviewed and no floodplains were identified within the project area (FEMA 2008). The FEMA FIRMette for the project area is included in Attachment C.

3.4.1 Environmental Impacts

3.4.1.1 No Build Alternative

There would be no impact on floodplains under the No Build Alternative.

3.4.1.2 Build Alternative

There would be no impact on floodplains under the Build Alternative.

Section 4 Biological Resources

The vegetation and wildlife habitat investigation assessed the existing resources in the project area and evaluated potential impacts on these resources.

The proposed project area is not appropriate habitat for any federal-listed threatened, endangered, proposed, or candidate species listed by USFWS as occurring in Cook County, nor is it appropriate habitat for any state-listed species listed by IDNR as occurring in Cook County (IDNR 2014b, USFWS 2014). A summary of federal- and state-listed species is included in Attachment D.

The IDNR EcoCAT database was reviewed to identify special-status plants and animals with the potential to occur in the project area. The IDNR EcoCAT database recorded occurrences of peregrine falcons (*Falco peregrinus*) in the project area (IDNR 2014a). Peregrine falcons are large falcons that are specialized for capturing smaller birds in the air. They typically nest on cliff ledges, and in urban areas they can be found nesting on ledges of tall buildings and high bridges. The EcoCAT report is included in Attachment A.

The Chicago Nature and Wildlife Plan was reviewed and no nature areas in the project area were identified (City of Chicago 2014).

4.1 Environmental Impacts

4.1.1 No Build Alternative

No impacts on biological resources would occur from the No Build Alternative.

4.1.2 Build Alternative

Peregrine falcons could be expected to forage for small birds and pigeons throughout the project area. They would be found flying high above the project area and perched on buildings and other structures within the project area. Although peregrine falcons are migratory, falcons have been observed in the Chicago area in the winter in recent years. There are no known nesting pairs of peregrine falcons within about 1 mile of the project area (Field Museum 2014).

Given the highly urbanized nature of the project area, the Build Alternative would have no impacts on other federal- or state- listed animal or plant species.

There are three areas within 0.25 mile of either side of the proposed project that appear to contain approximately 0.5 acres or more of contiguous habitat, based on inspection of aerial photography. These three areas are a portion of St. Boniface cemetery, Buttercup Park, and a private garden/park at the northwest corner of Catalpa Avenue and Winthrop Street. None of these areas support wildlife communities that are substantially different from the surrounding commercial and residential areas. During project permitting, a detailed tree inventory would need to be

RED-PURPLE BYPASS PROJECT RESOURCES WITH LIMITED OR NO IMPACTS TECHNICAL MEMORANDUM

prepared for each work zone. A small number of trees may be removed as a result of construction activities. Tree removal would be regulated by local ordinances, would impact the urban tree inventory, and might affect birds protected under the Migratory Bird Treaty Act.

If construction occurs at night, then the necessary lighting would generate a temporary adverse impact on wildlife. Throughout the project area, there is considerable night lighting. Light impacts would not expected to affect birds during the spring or fall migration because migrating birds would experience greater light impacts from the surrounding urban areas. With the implementation of mitigation measures to avoid impacts on nesting migratory birds, potential light impacts during construction would not be adverse.

Bird species that may use trees that could be removed or disturbed during construction could be affected by the project. Potential mitigation measures that would reduce adverse impacts would include the following:

- Tree removal would be timed as much as possible to occur outside the migratory bird nesting season, which occurs generally from April 1 to September 15 and as early as March 1 for some species.
- If construction must occur during the nesting season, two biological surveys would be conducted: one 15 days before and a second 72 hours before the construction that would remove or disturb suitable nesting habitat. The surveys would be performed by a biologist with experience conducting breeding bird surveys. The biologist would prepare survey reports documenting the presence or absence of any protected bird in the habitat to be removed, and any other such habitat within 300 feet of the construction work area. If a protected bird is found, surveys would be continued in order to locate any nests. If an active nest is located, construction within 300 feet of the nest would be postponed until the nest is vacated and juveniles have fledged, and when there is no evidence of a second attempt at nesting.
- Avoidance measures would be incorporated into the design of the project during preliminary engineering where feasible. If construction of the project requires removal of a protected tree, a permit would be required in accordance with applicable City of Chicago codes and ordinances in which the affected tree is located. Tree removal permits may require replanting of protected trees within the project area or at another location to mitigate for the removal of these trees. Replanting would be done according to the ratios required by tree removal permits and in a size that is appropriate for the species and setting as determined by an arborist. In addition, planted trees would be maintained such that ninety percent are in good condition after 6 months, and irrigation would be carried out until the trees are established.

With these measures employed, there would be no measurable impacts on biological resources remaining.

Section 5 Geology and Soils

Local topography in the project area is generally flat and varies less than 50 feet with a minimum elevation of 580 feet and a maximum elevation of 699 feet above sea level. The USDA NRCS Soil Data was used to confirm that soil within 200 feet of the proposed project is classified as urban land (USDA 2014). This soil type is reserved for highly disturbed soils that have resulted from human activities, and have been altered over time through construction activities. Bedrock is unlikely to be encountered during construction. The Web Soil Survey results for the project area are included in Attachment B. Figure 2 shows soil units for the project area.

5.1 Environmental Impacts

5.1.1 No Build Alternative

No impacts on geology or soils would occur from the No Build Alternative.

5.1.2 Build Alternative

The Build Alternative would not have adverse impacts on geologic or soil resources; therefore no mitigation measures would be required. The project would, in accordance with federal disposal guidelines, remove urban fill that is potentially contaminated with hazardous materials. Removing this material, disposing of it properly, and as needed, filling with tested materials, could be beneficial to human health and the environment.

Figure 4: Soil Units near the Project Area

Section 6 Energy

Energy supplies primarily include sources of energy (e.g., electrical, gas/oil, solar) potentially consumed by the project.

6.1 Environmental Impacts

6.1.1 No Build Alternative

No impacts on energy would occur from the No Build Alternative.

6.1.2 Build Alternative

The one-time irreversible commitment of energy resources for construction would amount to less than 0.5 percent of the total annual energy consumption for Cook County, which is 530 trillion British thermal units (BTU). The proposed operating plan, which increases actual train passenger capacity by over 10 percent in the peak direction during the peak-period, would increase energy use by less than 0.9 percent of CTA's current energy use for rail transit. Construction of the project would not have an impact on energy consumption in the area of potential impact, Cook County, or the Chicago Metropolitan Area. The change in energy use for operations is negligible.

Section 7 Safety and Security

This section assesses the potential impacts of the Red-Purple Bypass Project on safety and security in surrounding communities, as well as for the passengers and employees who would be in the project area after implementation of the Build Alternative. The section includes an evaluation of existing safety and security facilities or programs, as well as safety and security design requirements that would be incorporated as part of this project.

Safety includes all incidents within CTA right-of-way; this includes areas along tracks and at stations. Potential safety hazards include collisions, derailments, fires, property damage, injuries, and fatalities. Security refers to freedom from harm resulting from intentional acts or circumstances. Intentional harm includes crimes and must be reported if the intentional act meets thresholds for notification as specified in the FTA's State Safety Oversight Rule (USDOT 2005).

Federal safety and security requirements for rail systems are primarily provided in 49 CFR § 659, and through Occupational Safety and Health Administration (OSHA) standards and regulations for providing a safe and healthy workplace (namely the Occupational Safety and Health Act of 1970). Safety and security planning is included in CTA's System Safety Program Plans and Security and Emergency Preparedness Plan, which require CTA to comply with provisions under 49 CFR § 659. These processes are integrated into major projects through a Safety and Security Certification Program and are documented in a Safety and Security Certification Plan. The CTA Infrastructure Design Criteria Manual also addresses safety and security (CTA 2014). Collectively, these standards address system safety, security, fire protection, human factors, reliability, maintainability, configuration management, and quality control. Passenger safety is the highest priority in system safety objectives, as well as the safety of CTA employees. Construction, installation, inspection, and testing procedures are also objectives covered by the standards.

For the purposes of this analysis, an adverse safety and security impact is defined as one that would cause one or more of the following:

- Creation of the potential for increased major safety or security incidents reportable to FTA
- Failure to meet the applicable design standards where such failure results in a safety or security impact
- Marked increase in pedestrian safety or security risks on or off the CTA train system

7.1 Environmental Impacts

7.1.1 No Build Alternative

Construction included in the No Build Alternative would consist of minor repairs to the CTA structure to maintain a state of good repair. Given the small scope of work for the No Build Alternative, construction-related safety and security impacts would not be anticipated. The No Build Alternative would not improve safety and meet modern CTA design criteria. Like today, the No Build Alternative would provide insufficient room for walkways. This configuration translates into delays during maintenance and inspection. Trains would continue to be held by flaggers as workers clear the tracks (because any space between tracks is insufficient for a train to pass with workers in this space). To clear one track, workers must stand in the pathways of other tracks. The continued degradation of system infrastructure that would occur as part of the No Build Alternative could increase the risk of major incidents such as collisions, derailments, and fires, which would be an adverse impact.

7.1.2 Build Alternative

Construction Impacts

No construction-related safety and security impacts are anticipated under the Build Alternative. For any major capital project, CTA has a construction contract that requires the contractor to protect project site and all adjacent properties, and to take all necessary precautions for the safety of all persons on or near the project site. This requirement includes provisions to render all portions of the work secure in every respect and to decrease the possibility of, or liability for, accidents. The contractor is required to have approved a Health and Safety Plan and a Safety and Security Plan before the start of any construction work. The Safety and Security Plan would describe protection to be provided by the contractor for its employees, CTA passengers and employees, and the general public. The project contractor would be required to follow OSHA standards. CTA would work with the City of Chicago Office of Emergency Management and Communications to provide access for emergency vehicles as necessary. CTA's construction field engineers would be on-site when work is taking place to inspect and monitor construction activities for compliance. CTA's construction management inspectors, the City's building inspectors, and OSHA would monitor and inspect the project area as required. Temporary street and sidewalk closures would be obtained when necessary for the protection of persons and/or property. Pedestrian and roadway detours would be properly marked and include appropriate signage.

Permanent Impacts

The Build Alternative would modernize the system and remove a flat junction, thereby reducing the risk of major incidents—including collisions and derailments—and providing safety benefits for CTA passengers and employees. Modernizing the system would involve straightening out existing curves in the alignment and expanding right-of-way to meet modern safety standards, providing adequate clearances for track maintenance and allowing CTA to meet minimum emergency access standards. While CTA maintains a fail-safe signal system at Clark Junction for train crossing moves, removal of this flat junction would improve safety at the junction because

RED-PURPLE BYPASS PROJECT RESOURCES WITH LIMITED OR NO IMPACTS TECHNICAL MEMORANDUM

trains would no longer need to cross one another. The project is being designed and would be operated consistent with federal, state, and local safety and security policies and guidance.

To minimize security risks related to trespassing or common criminal activities, the project design would minimize dark spaces and discrete locations beneath the closed-deck structure where criminal activity could occur. Lighting would minimize any remaining dark spaces. Fencing and cameras would be considered where security risks remain.

The one-time irreversible commitment of energy resources for construction would amount to less than 0.5 percent of the total annual energy consumption for Cook County, which is 530 trillion British thermal units (BTU). The proposed operating plan, which increases actual train passenger capacity by over 10 percent in the peak direction during the peak-period, would increase energy use by less than 0.9 percent of CTA's current energy use for rail transit. Construction of the project would not have an impact on energy consumption in the area of potential impact, Cook County, or the Chicago Metropolitan Area. The change in energy use for operations is negligible.

Impact Assessment Section 217-785-5500 Division of Ecosystems & Environment

Disclaimer

The Illinois Natural Heritage Database cannot provide a conclusive statement on the presence, absence, or condition of natural resources in Illinois. This review reflects the information existing in the Database at the time of this inquiry, and should not be regarded as a final statement on the site being considered, nor should it be a substitute for detailed site surveys or field surveys required for environmental assessments. If additional protected resources are encountered during the project's implementation, compliance with applicable statutes and regulations is required.

Terms of Use

By using this website, you acknowledge that you have read and agree to these terms. These terms may be revised by IDNR as necessary. If you continue to use the EcoCAT application after we post changes to these terms, it will mean that you accept such changes. If at any time you do not accept the Terms of Use, you may not continue to use the website.

IDNR Project Number: 1500362

- 1. The IDNR EcoCAT website was developed so that units of local government, state agencies and the public could request information or begin natural resource consultations on-line for the Illinois Endangered Species Protection Act, Illinois Natural Areas Preservation Act, and Illinois Interagency Wetland Policy Act. EcoCAT uses databases, Geographic Information System mapping, and a set of programmed decision rules to determine if proposed actions are in the vicinity of protected natural resources. By indicating your agreement to the Terms of Use for this application, you warrant that you will not use this web site for any other purpose.
- 2. Unauthorized attempts to upload, download, or change information on this website are strictly prohibited and may be punishable under the Computer Fraud and Abuse Act of 1986 and/or the National Information Infrastructure Protection Act.
- 3. IDNR reserves the right to enhance, modify, alter, or suspend the website at any time without notice, or to terminate or restrict access.

Security

EcoCAT operates on a state of Illinois computer system. We may use software to monitor traffic and to identify unauthorized attempts to upload, download, or change information, to cause harm or otherwise to damage this site. Unauthorized attempts to upload, download, or change information on this server is strictly prohibited by law.

Unauthorized use, tampering with or modification of this system, including supporting hardware or software, may subject the violator to criminal and civil penalties. In the event of unauthorized intrusion, all relevant information regarding possible violation of law may be provided to law enforcement officials.

Privacy

EcoCAT generates a public record subject to disclosure under the Freedom of Information Act. Otherwise, IDNR uses the information submitted to EcoCAT solely for internal tracking purposes.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service Web Soil Survey URL: http://websoilsurvey.nrcs.usda.gov Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Cook County, Illinois Survey Area Data: Version 7, Dec 8, 2013

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Apr 29, 2011—Mar 28, 2012

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

	<u>Mead's milkweed</u> (Asclepias meadii)	Threatened	Late successional tallgrass prairie, tallgrass prairie converted to hay meadow, and glades or barrens with thin soil
	<u>Prairie bush clover</u> (Lespedeza leptostachya)	Threatened	Dry to mesic prairies with gravelly soil
Crawford Field Office to Contact: U.S. Fish and Wildlife Service	<u>Indiana bat (Myotis sodalis)</u>	Endangered	Caves, mines (hibernacula); small stream corridors with well developed riparian woods; upland forests (foraging)
Marion Illinois Sub-Office 8588 Route 148 Marion, Illinois 62959 Phone: (618) 997-3344, ext. 340	Northern long-eared bat Myotis septentrionalis	Proposed as Endangered	Hibernates in caves and mines - swarming in surrounding wooded areas in autumn. Roosts and forages in upland forests and woods.
FAX: (618) 997-8961 e:mail Marion@fws.gov	Rabbitsfoot (Quadrula cylindrica cylindrica)	Threatened	Wabash River
	Eastern prairie fringed orchid (Platanthera leucophaea)	Threatened	Mesic to wet prairies
Cumberland Field Office to Contact: U.S. Fish and Wildlife	<u>Indiana bat (</u> Myotis sodalis)	Endangered	Caves, mines (hibernacula); small stream corridors with well developed riparian woods; upland forests (foraging)
Service Marion Illinois Sub-Office 8588 Route 148 Marion, Illinois 62959 Phone: (618) 997-3344, ext. 340 FAX: (618) 997-8961 e:mail Marion@fws.gov	Northern long-eared bat Myotis septentrionalis	Proposed as Endangered	Hibernates in caves and mines - swarming in surrounding wooded areas in autumn. Roosts and forages in upland forests and woods.
	<u>Snuffbox</u> (Epioblasma triquetra)	Endangered	Small to medium-sized creeks and some larger rivers, in areas with a swift current
	Eastern prairie fringed orchid (Platanthera leucophaea)	Threatened	Mesic to wet prairies
DeKalb Field Office to Contact: U.S. Fish and Wildlife	Indiana bat (Myotis sodalis)	Endangered	Caves, mines (hibernacula); small stream corridors with well developed riparian woods; upland forests (foraging)

Illinois Threatened and Endangered Species by County

Illinois Natural Heritage Database

as of October 2013

<u>Important Note:</u> The Illinois Natural Heritage Database is updated daily with data pertaining to threatened and endangered species occurrences in Illinois. Please check this website quarterly for updates to this list or contact Database staff directly at tara.kieninger@illinois.gov or (217)782-2685.

Please note that because many birds observed in the state are merely migrants passing through, we typically only track those sightings which have evidence of breeding (nest with young, breeding and/or nesting behavior in adults, juveniles observed, etc.). We normally do not track instances where a bird is observed perched on a tree branch, flying in the air, or feeding unless other evidence of breeding is witnessed or there is an existing breeding record for the species in the area.

State Status:

LE - listed as endangered

LT - listed as threatened

Scientific Name	Common Name	State Protection	# of occurrences	<u>Last Observed</u>
Adams_				
Acipenser fulvescens	Lake Sturgeon	LE	1	1966-09-28
Carex prasina	Drooping Sedge	LT	1	1989-06-15
Cumberlandia monodonta	Spectaclecase	LE	1	1987-07-19
Delphinium carolinianum	Wild Blue Larkspur	LT	2	1971-05-20
Dendroica cerulea	Cerulean Warbler	LT	2	2007-06-30
Ellipsaria lineolata	Butterfly	LT	3	2011-11-02
Elliptio crassidens	Elephant-ear	LT	1	1987-06-18
Fusconaia ebena	Ebonyshell	LT	2	2008-10-06
Hybognathus hayi	Cypress Minnow	LE	1	2004-09-16
Ictinia mississippiensis	Mississippi Kite	LT	1	1990-07-13
Lanius ludovicianus	Loggerhead Shrike	LE	2	1989
Liatris scariosa var. nieuwlandii	Blazing Star	LT	4	2009-09-02
Ligumia recta	Black Sandshell	LT	2	2011-11-02
Melanthium virginicum	Bunchflower	LT	1	1944-06-29
Myotis grisescens	Gray Bat	LE	1	2000-02-08
Myotis sodalis	Indiana Bat	LE	12	2013-06-12
Pandion haliaetus	Osprey	LE	1	1986-SUM
Plethobasus cyphyus	Sheepnose	LE	1	1987-07-19
Poa wolfii	Wolf's Bluegrass	LE	1	2003-05-22
Scirpus polyphyllus	Bulrush	LT	1	1989-06-15
Thryomanes bewickii	Bewick's Wren	LE	1	2012-04-30
Tomanthera auriculata	Ear-leafed Foxglove	LT	1	1943-08-29
Trifolium reflexum	Buffalo Clover	LT	1	2009-05-08
Trillium viride	Green Trillium	LE	1	2002-04-15
Viburnum molle	Arrowwood	LT	3	2004-11-06

Appendix D Environmental Assessment Technical Memoranda

- D-1: Individual Property Displacement Information Sheets and Market Study
- D-2: Land Use and Economic Development Technical Memorandum
- D-3: Neighborhood, Community, and Business Impacts Technical Memorandum
- D-4: Historic and Cultural Resources Technical Memorandum
- D-5: Noise and Vibration Technical Memorandum
- D-6: Hazardous Materials Technical Memorandum
- D-7: Environmental Justice Technical Memorandum
- D-8: Resources with Limited or No Impacts Technical Memorandum
- D-9: Section 4(f) Magnitude of Cost Comparison

	Mainline		
	Length	Cost per Mile	Total Cost
Alternative	(miles)	Ratio	Ratio
Alternative A - Build Alternative	0.3	1.0	1.0
Alternative B - Underground Tunnel Alternative	1.2	3.4	15.0
Alternative C - Stacking Tracks Alternative	0.4	1.0	1.3
Alternative D - Shift Mainline Alignment to the East Alternative	0.3	1.0	1.0
Alternative E - Basic Rehabilitation of the Mainline	0.3	0.9	0.9
Alternative F - Narrow Mainline Alignment and Modernize Tracks	0.3	1.0	1.0

B - Tunnel: Cost ratio is simple order of magnitude ratio based on cost per mile of recent New Starts projects.

All other alternatives are approximately the same order of magnitude cost/mile as the Build Alternative.

D - East Shift: While structure ratio is similar, additional ROW is required for the shift to the east.

E - Basic Rehabilitation: Cost ratio is based on 2014 cost estimate performed by CTA.
